SUMMARY

Computer Science professional skilled in data analytics, machine learning, IoT, and computer vision, with experience in Python, SQL, Power BI, and real-time analytical systems. I have a strong track record of improving prediction accuracy, automating workflows, and deploying ML-driven solutions, and I am seeking roles in Data Analytics, Machine Learning, Software Engineering, or IT/Data Operations.

SKILLS

Programming Languages: Python, SQL, R, SAS

Data Analysis & Visualization: Power BI, Tableau, Advanced Excel, Matplotlib, Seaborn

Machine Learning & AI: CNN, YOLO, Predictive Modeling, Regression, Classification

Data Processing & Analytics: Data Cleaning and Preprocessing, Feature Engineering, Statistical Analysis

Databases: MySQL, MongoDB

Frameworks & Tools: OpenCV, Flask, Git, Label-IMG

IoT & Sensor Data Analytics: Raspberry Pi, Jetson Nano, Real-time Data Collection

EXPERIENCE

Research Assistant — Prairie View A&M University

Sep 2025 – Present

- Supported IoT + ML research using Raspberry Pi sensor systems and analytics workflows, improving processing efficiency by 30%.

Graduate Research Assistant — Prairie View A&M University

Oct 2023 – Feb 2025

- Conducted comprehensive collection and analysis of soil spectral data from diverse research papers and scientific datasets and developed a Convolutional Neural Network (CNN) model to preprocess, estimate, and evaluate soil properties from spectral datasets.

Project Intern — Tata Motors, Pune

Jan 2023 – May 2023

- Developed a Faster R-CNN model (92% accuracy) for S-cam component detection using 1,000+ annotated images, reducing inspection time by 70%.
- Designed and implemented an interactive, real-time Power BI dashboard integrated with Excel, enhancing vehicle bay utilization tracking by 45

Data Analyst — RentOne.com

Aug 2021 – Jan 2023

- Developed rental trend dashboards improving reporting speed by 50%.

PROJECTS

IoT-Based Poultry Farm Gas Monitoring

- Built a real-time dashboard for CO₂/CH₄/NH₃ monitoring with ML forecasting ($R^2=0.87$) using Raspberry Pi sensors.

Technologies Used: Python, Raspberry Pi, MQ-Series Gas Sensors, Excel, Power BI, Regression Models, Forecasting

Face Recognition Attendance System

- Developed a CNN/KNN-based attendance system (95% accuracy) with GUI and automated database logging.

Technologies Used: Python, OpenCV, CNN, KNN, Tkinter GUI, MySQL, NumPy, Scikit-learn

EDUCATION

Master of Computer Science, Prairie View A&M University — GPA 3.50

May 2025

B.Tech (Computer Science, AI-ML), DY Patil International University — GPA 3.45

May 2023

ACHIEVEMENTS

Dean's Master's Scholarship; Poster Presentation (PVAMU 2024); Smart India Hackathon (2022, 2023); Research Paper: An IoT-Based System for Measuring Gas Emissions in Smart Poultry Farms

CERTIFICATIONS

Google Data Analytics Certificate — Coursera (2024)

SQL/MySQL Certification — Udemy (2023)

Complete Data Science Training — Udemy (2023)
