

Data Analytics/SQL/ETL/Power BI Developer

Professional Summery

- 8 years of experience in Data Analytics, Business Intelligence, and ETL Development, specializing in SQL Server, SSIS, SSRS, Power BI, Python, and predictive analytics.
- Designed and developed interactive dashboards in Power BI and SSRS, utilizing DAX, SQL, and Python (Pandas, NumPy) for real-time insights and trend analysis.
- Expert in T-SQL and database management, creating optimized stored procedures, indexing strategies, and schema designs for efficient data retrieval and transformation.
- Implemented robust ETL workflows using SSIS and Power Query, integrating data from SQL Server, Oracle, cloud sources, and REST APIs to automate reporting processes. Extract and transform nested JSON data for seamless integration into structured datasets and reporting models
- Developed predictive analytics models leveraging Python and Power BI, applying time-series forecasting, regression analysis, and anomaly detection to drive business insights.
- Built and maintained scalable data warehouses, utilizing OLAP cube structures, star/snowflake schema models, and advanced data modeling techniques for enterprise reporting.
- Configured Power BI Gateway and Power Automate, enabling secure real-time data access, automated refreshes, and workflow automation for streamlined operations.
- Optimized Power BI performance by implementing DAX calculations, calculated measures, and data transformations, enhancing report responsiveness and efficiency.
- Strong troubleshooting expertise, resolving Power BI, SSRS, and SQL Server performance issues, debugging workflow failures, and ensuring data consistency.
- Collaborative and results-driven, working with cross-functional teams and stakeholders to deliver scalable, high-performance business intelligence solutions.

Technical Proficiencies

Languages:	Visual Basic, PowerShell, C#, T-SQL, Java, Python, Net, ADO.NET, ASP.NET, T-SQL, XML, HTML.
Database	
Technologies :	MSSQL Server (2008-2022), Oracle DB, Azure SQL database
Tools & Systems	SQL Server Management Studio (SSMS), MySQL Workbench, Oracle SQL Developer,
Proficiency:	Microsoft Azure, Power BI, Microsoft Access, ETL tools, Backup tools, Data recovery tools
ETL Tools:	SSIS, Azure Data Factory, Informatica Cloud, V2
Reporting Tools	Power BI Desktop, Power BI service, Tableau, Report Builder, Visual Studio/SSRS
Operating Systems:	Windows Server, Linux, MacOS
Analysis Tools	SQL Server Analysis Server (Tabular and Multi-Dimensional), SSAS.
Other Skills/Tools	Agile Methodology, GitHub, Jira, MS Excel, SharePoint, Erwin, BCP, Brio

Work Experience

UnitedHealth Group, Washington. DC

01/2024—Present

Data Analytics / Power BI Developer

- Designed and optimized data models, implementing views, indexes, and performance-tuned queries to facilitate efficient data extraction, transformation, and analysis for business intelligence applications.

- Developed and maintained interactive dashboards in Power BI and Tableau, integrating predictive analytics models to uncover patterns, enhance insights, and support data-driven decision-making.
- Utilized Python, Pandas, and NumPy for data preprocessing, anomaly detection, and ETL automation, ensuring structured and clean datasets for advanced reporting.
- Authored complex T-SQL scripts, stored procedures, and user-defined functions, optimizing data transformation processes and query performance within relational databases.
- Created GSHS reports in Power BI from scratch, ensuring data accuracy, consistency, and visualization efficiency for key business performance insights.
- Designed and built multi-dimensional data warehouses, implementing Star and Snowflake schema architectures to enhance OLAP query performance and support enterprise-wide reporting.
- Developed interactive and visually compelling Power BI reports, incorporating Pie Charts, Bar Graphs, Tree Maps, and Scatter Plots, making analytical insights more accessible to stakeholders.
- Implemented advanced DAX expressions and calculated measures, optimizing KPI tracking and enabling real-time business performance analysis.
- Integrated SQL Server, Oracle, and NoSQL databases, creating seamless data aggregation pipelines for real-time and batch reporting.
- Installed, configured, and managed Power BI Report Server, ensuring secure enterprise-wide access to reports and dashboards for enhanced collaboration.

TD Bank, Cherry Hill, New Jersey

11/2021 –12/ 2023

SQL / Power BI Developer

- Designed and implemented ETL pipelines for structured and semi-structured data, optimizing data flow across data warehouses and operational data stores (ODS) for enterprise reporting.
- Developed and deployed SSIS packages, utilizing data flow, control flow, and script tasks to handle complex transformations and automate data integration.
- Automated Power Query refresh processes, leveraging parameterized queries to reduce manual intervention and improve data processing efficiency in Power BI.
- Extracted, transformed, and integrated data from SQL Server, Azure, REST APIs, and cloud sources, ensuring seamless connectivity with Power BI dashboards.
- Configured and maintained Power BI Gateway, enabling real-time, secure access to on-premises and cloud-based data sources for up-to-date analytics.
- Developed Power BI Workspaces and Apps, organizing structured access to reports, dashboards, and datasets, ensuring efficient data governance and user collaboration.
- Optimized Power BI performance, creating DAX measures, calculated columns, and aggregations to handle complex business logic and improve report responsiveness.
- Enhanced SQL query performance, writing and tuning stored procedures, indexing strategies, and advanced queries for faster data retrieval in Power BI and SSRS.
- Managed SQL Server migration projects, upgrading legacy systems from SQL Server 2008 R2 to 2016, improving scalability, security, and overall system performance.
- Implemented SQL Server security policies, configuring access controls, compliance frameworks, and encryption mechanisms to ensure data integrity and confidentiality

Sogeti. Baltimore, MD

06/2019 –10/ 2021

SQL Server Database Administrator (DBA)

Assessed business processes and user requirements to develop and implement efficient database maintenance strategies, including index optimization, backup plans, and statistics updates to enhance system performance. Configured SQL Server alerts using the IDERA tool to monitor and proactively address potential database issues. Implemented Transparent Data Encryption (TDE) and established secure backup and restore procedures for encrypted databases.

- Upgraded SQL Server environments from 2012 to 2014/2016, ensuring smooth transitions by applying service packs and performing regular maintenance updates with minimal disruption.
- Collaborated with application teams to optimize database performance, diagnosing and resolving blocking, deadlocks, and locking issues, leading to improved efficiency and system stability.
- Collaborated with application teams to optimize database performance, diagnosing and resolving blocking, deadlocks, and locking issues, leading to improved efficiency and system stability.
- Automated database maintenance tasks such as backups, integrity checks, and index management using Control-M Agent and SQL Server Agent, reducing manual intervention and enhancing reliability.
- Managed the deployment and troubleshooting of SSIS packages, ensuring seamless data flow from development to production while optimizing ETL processes,
- Developed and fine-tuned complex T-SQL scripts and stored procedures, improving system functionality, data accuracy, and query performance
- Managed ServiceNow (SNOW) tickets, handling incident resolution and service requests efficiently to maintain high system uptime and reliability.
- Worked closely with application development and support teams to identify and resolve database-related issues, ensuring high levels of service availability and performance

U.S. Bank, Minneapolis, Minnesota

02/2017 – 05/2019

SQL Server Database Administrator (DBA)

Managed the implementation, configuration, maintenance, and performance optimization of SQL Server 2008/2012/2008R2, including applying service pack upgrades from SQL 2012 SP3 to SP4 on two-node clusters and conducted daily monitoring of SQL jobs, replication processes, and hardware diagnostics, while managing logins and user access to ensure robust data security.

- Diagnosed and resolved performance issues using SQL Server error logs, Windows Event logs, Execution Plan, Profiler, Activity Monitor, Perfmon, and DMVs.
- Configured Active Directory security groups and maintained database replication for production servers to ensure high availability.
- Installed SSL-encrypted certificates on Windows clusters to enforce SQL Server-forced encryption for secure database communications.
- Set up and maintained Transactional and Snapshot Replication across production, UAT, and test environments.
- Implemented DDL triggers to prevent unauthorized table modifications, restrict user access, and manage replication with full, differential, and transaction log backups.
- Created and configured a mail profile with SQL Mail alerts to automate notifications for job failures and successes.
- Designed and developed ETL packages using SSIS 2005/2008, integrating various data sources such as SQL Server, flat files, and XML, while performing complex data transformations.

Education

Bachelor of Science, Information Technology
