TECHNICAL SKILLS

- JavaScript, TypeScript, Python, React, Next.js, Node.js, Express.js, Flask, HTML, Jinja, CSS, SQL, MongoDB, Postman, Git, WordPress, Elementor

EXPERIENCE

Software Developer, Homery

January 2025 - Present

- Spearheaded the refactor of legacy WordPress infrastructure into a modern e-commerce site using **TypeScript, React, Next.js, and Tailwind CSS** – Delivering a responsive user experience that supports over \$200,000 in monthly sales at homery.com
- Developed websites using **WordPress, Elementor, and JavaScript** for real estate platforms managing more than \$100M in assets: fouertirealty.com & onestopmanagement.com
- Built custom WordPress plugins in PHP to address unique business needs, allowing for advanced functionality
- Engineered cross-platform responsive designs to ensure consistent performance and layout across mobile, tablet, and desktop devices.
- Collaborated with design and engineering teams to convert Figma designs to reusable React components,
- Integrated static JSON API's into WordPress using JavaScript to dynamically render data
- Also led development on lvmsfl.com

Coding Instructor, STEP at Hostos Community College

June 2024 - August 2024

- Taught JavaScript, React, HTML, and CSS fundamentals to students aged 13–17, fostering early interest in software engineering and problem-solving strategies.

Software Engineering Fellow, Hackbright Coding Bootcamp Sponsored by Walmart

April 2023 - June 2023

- Built MyLibrary, a full-stack web application (**Python/Flask/PostgreSQL**) to track and review books, implementing data models, login authentication, and API integration.
- Gained exposure to key backend concepts, including SQL schema design, relational modeling, and server-side rendering with Jinja2.
- Strengthened skills in debugging, testing, and writing maintainable code through daily code reviews and peer programming.

Software Developer, mThree

January 2022 - March 2022

- Developed multiple full-stack applications using the **MERN stack**; handled authentication, routing, and database communication.
- Conducted peer code reviews and authored documentation to enhance code quality and clarity.
- Created backend RESTful services and validated data integrity using Postman and custom unit tests with Mocha & Chai.

PROJECTS

Homery

- Sites developed while employed at Homery include: [Homery.com](https://homery.com), [FouertiRealty.com](https://fouertirealty.com), [OneStopManagement.com](https://onestopmanagement.com), lvmsfl.com, and contributions to other company sites
- Technologies used across all projects include: JavaScript, TypeScript, React, Next, Tailwind, WordPress, Elementor, and PHP

MyLibrary

- Created a platform for book tracking and community reviewing, leveraging Google Books API and relational DB structures.
- Built using Flask, Python, PostgreSQL, Jinja, CSS, HTML, and Bootstrap for front-end design and styling. It also utilizes the Google Books API

Spotify Playlist

- Created a React-based application using the Spotify OAuth API that allows users to search songs and save playlists directly to their Spotify accounts.

EDUCATION

Baruch College

Bachelor's Degree in Economics

August 2019
