PROFESSIONAL SUMMARY

Data Analyst with 3+ years of experience leveraging SQL, Excel, Power BI, and Power Query to clean, transform, and visualize data for business and operations teams. Experienced in building automated reports and interactive dashboards that support decision-making in fast-paced, cross-functional environments. Adept at translating complex data into clear, actionable insights for stakeholders in both technical and non-technical roles.

CORE SKILLS

Category	Tools / Technologies
Databases / SQL	SQL (JOINs, CTEs, subqueries, window functions), SQL Server, MySQL
Reporting & BI Tools	Power BI (dashboards, KPIs, slicers), DAX, Power Query
Data Analysis / Excel	Pivot Tables, XLOOKUP, VLOOKUP, COUNTIF, AVERAGEIF, statistical analysis
Version Control	Git, GitHub, GitLab (Branching, Pull Requests, Merge Conflict Resolution)
Project Management	Agile (Scrum), Sprint Planning, Task Prioritization, Cross-Functional Collaboration

PROJECT EXPERIENCE

Mental Health & Lifestyle Data Analytics Project

- Analyzed a mental health and lifestyle dataset to evaluate how sleep, exercise, diet, screen time, mood, stress, and productivity affect daily well-being.
- Performed data cleaning and preprocessing in SQL, including handling missing values, standardizing numeric columns, removing duplicates, filtering invalid records, and validating data quality.
- Conducted descriptive, categorical, and correlation analysis in Excel using pivot tables and formulas such as COUNTIF, AVERAGEIF, and XLOOKUP to explore distributions and relationships between lifestyle factors and mood/stress.
- Used Power Query to transform cleaned data, create calculated columns, and categorize productivity based on exercise duration, fatigue levels, and pending tasks.
- Built an interactive Power BI dashboard featuring bar charts, scatter plots, KPIs, and slicers to visualize trends, correlations, and productivity metrics.
- Created optimized DAX measures to dynamically calculate average mood scores, stress levels, and counts of productive vs not productive days.
- Delivered key insights such as: higher exercise and fewer pending tasks correlate with increased productivity; better diet quality is associated with improved mood and reduced stress; adequate sleep and social interaction positively impact mental well-being.

Tools: SQL, Excel, Power Query, Power BI, DAX

PROFESSIONAL EXPERIENCE

Data Analyst

Aarna Tech Solutions -INDIA

May 2015 – June 2018

- Ran scheduled and ad-hoc SQL queries to support reporting, operations, and compliance requests, ensuring timely delivery of accurate data.
- Prepared clean, validated data extracts in Excel and CSV formats for internal stakeholders, reducing manual data preparation effort.
- Assisted with campaign and outreach datasets, applying suppression logic and segmentation rules to improve targeting accuracy.
- Maintained recurring operational reports in Excel and Power BI, performing data checks to ensure accuracy and consistency before distribution.
- Performed data quality checks including duplicate removal, formatting standardization, and missing value identification to improve reliability of reporting.
- Supported file loads and data transfers, validating record counts and resolving discrepancies with operations, QA, MIS, and reporting teams.
- Documented recurring SQL queries and reporting processes to support consistency, audit readiness, and knowledge transfer.

Tools: SQL Server, MySQL, Excel, Power BI, CSV

EDUCATION

Master of Science – Information Technology | Jawaharlal Nehru Technological University, India

Bachelor of Technology – Information Technology | Jawaharlal Nehru Technological University, India
