EDUCATION

Trine University — Master of Science in Information Studies

Jan 2023 – May 2024

Sreenidhi Institute of Science and Technology, Hyderabad, India *Bachelor of Technology in Information Technology*

Relevant Coursework: Software Engineering, Analysis of Algorithms, Databases, Operating Systems

TECHNICAL SKILLS

Languages: Java, C, Python, SQL, JavaScript

Web Technologies: HTML, CSS, React

Frameworks/Platforms: Node.js

Tools & IDEs: Git, Eclipse, IntelliJ, Visual Studio, Visual Studio Code **Database**

Systems: MS SQL

EXPERIENCE Data Science Intern — Goal Street Aug

2020 – Nov 2020

- Developed an end-to-end machine learning model to predict NHL player salaries for the 2016–2017 season.
- Conducted data preprocessing, exploratory data analysis, model training, and evaluation using regression techniques.
- Provided insights to assist general managers in early player signings based on predicted future performance.

Machine Learning Intern — AMBEST Technologies

Aug 2021 – Nov 2021

- Worked on fraud detection in a highly imbalanced credit card transaction dataset.
- Implemented and evaluated multiple machine learning algorithms using tools like Jupyter Notebook and Google Colab.
- Utilized libraries such as NumPy, Pandas, Matplotlib, Seaborn, and Scikit-learn to analyze and visualize results.

Python Developer Intern — Outlier

Aug 2024 – May 2025

- Leveraging expertise in program creation, engineering, and the software development life cycle (SDLC) to support impactful solutions.
 - Collaborated effectively across teams to deliver high-quality software aligned with organizational goals.
 - Improved internal data accessibility and organization for the IT department.
-

ACADEMIC PROJECTS

Crop Yield Prediction Using Machine Learning

Feb 2022

- Developed models to forecast agricultural yields based on parameters such as temperature, rainfall, and cultivation area.
 - Compared performance of multiple deep learning models using Mean Absolute Error to assist farmers in crop selection.
-
