Education

Masters in Information Systems

Jan2020–Jan 2022

California State University,USA(GPA:3.86)

Professional Experience

Sony Pictures Entertainment, Software Engineer -II

Feb2022– Present

Smart Engine Automation

- Converted the entire **Robot Framework** test repository~400 test cases from Robot Keywords to structured Behavior Driven Development – **BDD** style testcases to enhance readability for the business **stakeholders**.
- Hands-on optimization of 1,000+ XPath patterns across the entire test suite, strengthening maintainability and enabling faster in-sprint automation delivery.
- Refactored and standardized X path locators from static to relative X Paths across the entire automation test suite, reducing script fragility by **40%** and cutting test maintenance time in half.
- Set up end-to-end DevOps pipeline integrating **Robot Framework** test suites into AWS Code Build-AWS TestLab, automating regression execution twice per release cycle; reduced manual QA effort by **65%**, improved release stability, and increased automation coverage by **40%**.
- Coordinated cross-team planning across **Smart Engine**, GOLD, PRISMHUB, and Smart Reporting to aligning sprint delivery timelines and dependencies.
- Designed automation testcases to upload and process 5,000–10,000+ invoice, enabling validation of large-scale financial operations that originally took 5–6 hours to run manually; cut test cycle time by over **60%** and increased validation accuracy..

Sony Online Asset Requisition

- Developed and **A/B** tested a new vendor-facing order management component from scratch in **Angular14**, improving load time by ~25% directly improving order throughput for 568 vendors containing 23,000 Sony media assets.
- Designed & Implemented a **RESTful API** for retrieving paginated response of all 568 vendor assets & integrated with 5 other order management work-flows.
- Implemented in-app viewing of print assets by integrating into the media viewer within app-service, allowing users to render, preview, and inspect print materials—improving accessibility and the review experience.
- Implemented a refresh-cache flag on master tables and asset of **SpringBoot** scheduled jobs (cron) that detect changes, invalidate service caches, rebuild from source, and reset the flag—keeping APIs and UIs in sync ensuring near real- time updates for recent changes.
- Implemented cache refresh jobs powering SOAR’s frontend grid across vendor and asset modules, ensuring near real-time updates for recent changes.
- Designed **APIs** of digital asset management flows from a third-party service to an internal inventory management system; reduced dependency complexity.

Fellowship.AI, Software Engineer Intern

May2021–Aug2021

- Developed and deployed **RESTful** Flask services to serve real-time predictions from machine learning models; integrated **APIs** with frontend workflows.
- Prepared and preprocessed image datasets for **ML** training pipelines, from email campaign creatives that improved data quality and downstream model performance.

Certifications

- AZ-900 Azure Fundamentals, May 2022
- Meta Frontend Engineer, July 2025

Technical Skills

- **Languages:** Java, Python, TypeScript, JavaScript, SQL, Bash
- **Frontend:** Angular, React, Django,
- **J2EE & Backend Technologies:** SpringBoot, Spring MVC, Spring Data JPA, Micro services. REST APIs, Django, Flask, SOAP, SOA
- **Testing tools:** Postman, Robot Framework, Cucumber, Selenium.
- **Cloud & DevOps:** Azure (AZ-900, DP-203), AWS (CodeBuild, Test Lab, EC2), Docker, CI/CD, Github Actions.
