WORK EXPERIENCE

University of Wisconsin-Madison

Madison, WI

Research Assistant

Jan 2024 - May 2024

- Uncovered a 22% rise in housing cost burden across metro areas by analyzing U.S. Census ACS data (2000–2022) with Python and BeautifulSoup.
- Enhanced policy transparency with interactive SQL + Tableau dashboards illustrating real estate lobbying impacts on affordability.
- Applied spatial econometrics in R to flag neighborhoods with 15% greater rental instability, supporting data-driven urban planning.

National Institute of Software and Digital Content

Hanoi, Vietnam

INLAB Project Assistant

May 2020 - Dec 2020

- Boosted monthly income by \$500 for participants through improved data labeling processes using statistical modeling.
- Supported policy recommendations for underserved communities by analyzing projects for 12 organizations and documenting predictive analytics.

Women Who Code Project Assistant

Jun 2020 - Dec 2020

- Increased online engagement by 75% by launching the region's first Women Who Code season and expanding regional outreach.
- Empowered underrepresented groups by designing and leading workshops on data analysis, product strategy, and front-end development.

PROJECT EXPERIENCE

University of Wisconsin-Madison

Madison, WI

Predictive Modeling of Grocery Chain Expansion (Thesis)

- Achieved 85% model accuracy in forecasting grocery chain presence using classification models and community-level features.
- Visualized food accessibility across 77 Chicago neighborhoods using QGIS and Python.
- Queried and cleaned 500K+ records via SQL to evaluate food desert patterns relative to socio-economic indicators.

Impact of USMCA on U.S. Labor Markets

- Automated cleaning of 2M+ trade records, cutting manual work by 40% using Python and regex.
- Found a 12% drop in manufacturing employment post-USMCA tariff enforcement through regression analysis.
- Communicated results using Tableau dashboards to track shifts in trade and labor patterns since NAFTA.

Knox College

Galesburg, IL

COVID-19 Employment Impact Analysis

- Linked lockdowns to a 2.1% rise in unemployment risk using a multivariate Stata matrix across all 50 states.
- Combined health, policy, and labor data over 2 years to analyze job security impacts.

From Runway to Recession: A 13-Year Data Story

- Challenged the lipstick index by linking luxury and athleisure revenues to macroeconomic trends.
- Modeled GDP trends using revenue data from LVMH, Nike, and L'Oréal, running time series and log-level regressions in R.

SKILLS

Programming: Python, Stata, R, SQL, Tableau, Power BI; Microsoft Office (Advanced Excel).

Skills: Regression Modeling; Predictive Analytics; Time Series Forecasting; Data Science; Statistical Modeling.

EDUCATION

University of Wisconsin - Madison

Madison, WI

M.S., *Econometrics and Quantitative Economics*

Knox College

Galesburg, IL

B.A., *Economics and Business Management*
