

ABHINAV KOLA

DevOps Engineer | CI/CD Automation, Cloud Infrastructure & IaC | AWS, Azure, Docker, Kubernetes
Kolaabhi09@gmail.com | +1 214 656 3622 | LinkedIn

PROFESSIONAL SUMMARY

DevOps Engineer with hands-on experience designing, implementing, and maintaining CI/CD pipelines that automate application build, testing, and deployment across dev, test, and production environments in banking and financial services. Skilled in Infrastructure as Code (Terraform, ARM/Bicep, Pulumi) to manage cloud infrastructure on AWS and Microsoft Azure, and in configuring and managing containerized applications with Docker and Kubernetes (AKS). Proficient in Linux system administration and shell scripting (Bash, PowerShell, Python) to automate repetitive operational tasks. Monitors system performance and troubleshoots issues to ensure high availability using Prometheus, Grafana, Azure Monitor, and Datadog. Implements security best practices and DevSecOps/compliance standards (SAST/SCA scanning, RBAC) across infrastructure and pipelines, and collaborates with development, QA, and operations teams in Agile/Scrum environments to improve release processes, system reliability, and documentation.

CORE SKILLS

CI/CD & Automation: Azure DevOps YAML, Jenkins, GitHub Actions, Harness, Maven, Continuous Integration, Continuous Delivery

Cloud Platforms: AWS (EC2, S3, RDS, IAM, VPC), Microsoft Azure, Cloud Computing, Cloud Security

Infrastructure as Code: Terraform, ARM/Bicep, Pulumi, Configuration Management

Containers & Orchestration: Docker, Kubernetes (AKS), Helm Charts, Microservices Architecture

Monitoring & Logging: Prometheus, Grafana, Azure Monitor, Application Insights, Datadog, PagerDuty On-Call

Scripting & Version Control: Python, BASH, PowerShell, Azure CLI, Git, GitHub CLI, AWS CodeCommit

Security & DevSecOps: Checkmarx, Black Duck (SAST/SCA), SonarQube, RBAC, Key Vault, Regulatory Compliance

Identity & Access: Microsoft Entra ID, Microsoft Intune, Windows Server Active Directory

Operating Systems: Linux (RHEL/Unix), Windows Server 2019/2016/2012

Methodology: Agile/Scrum, Banking & Financial Services Environments, Operational Documentation

PROFESSIONAL EXPERIENCE

Senior DevOps Engineer | NTT DATA | Client: NAB (National Australia Bank) *June 2022 – August 2024*

- Designed, implemented, and maintained CI/CD pipelines (Azure DevOps YAML, Harness) automating build, test, and deployment for a distributed .NET Core web banking platform across dev, staging, and production environments.
- Managed cloud infrastructure as code using Terraform and ARM Templates to provision and maintain AKS clusters, VNets, ACR, and Key Vault, improving environment scalability and deployment consistency.
- Configured and managed containerized applications with Docker and authored Helm charts to deploy microservices on Kubernetes (AKS), delivering rolling, zero-downtime releases.
- Monitored system performance and application logs, troubleshooting production issues through a formal PagerDuty on-call rotation and performing root cause analysis with Prometheus, Grafana, and Datadog to ensure high availability.
- Implemented security best practices and compliance standards across infrastructure and pipelines, including RBAC, Key Vault secrets/token management, Network Security Groups, and automated security scanning.
- Collaborated with development, QA, and operations teams in Agile sprints to improve release processes, standardize deployment patterns, and support feature integration across shared banking environments.
- Automated identity and access administration in Microsoft Entra ID and supported device enrollment in Microsoft Intune, applying RBAC across cloud and on-premises systems.
- Maintained operational documentation for deployment processes, Windows Server/Active Directory environments, and VMware-virtualized infrastructure supporting banking systems.

Junior DevOps Engineer | Pfizer | Client: Prudential Global Insurance *January 2020 – February 2022*

- Supported CI/CD pipelines and multi-environment (dev/test) deployments for a Spring Boot microservices application, automating builds with Maven, quality gates with SonarQube, and DevSecOps scanning with Checkmarx and Black Duck.
- Configured and managed Docker containers, publishing images to Azure Container Registry (ACR), and provisioned cloud infrastructure (AKS, ACR, VNets, Key Vault) using Terraform and ARM Templates as reusable Infrastructure as Code.
- Wrote Python and BASH scripts to automate environment provisioning, artifact management, and log-ingestion troubleshooting, supporting API-driven service integrations and reducing manual operational effort.
- Maintained source repositories in Git and AWS CodeCommit and documentation for deployment processes and infrastructure; collaborated with client developers, QA, and operations in Agile/Scrum sprints, performing root-cause troubleshooting to improve release reliability.

EDUCATION

Master's Degree, Information Technology Management

Webster University, United States | Aug 2024 – June 2026
