

ANAND KRISHNA SIDDA

346-315-1127 | asiddakrishna@gmail.com | linkedin.com/in/siddaanand01

PROFESSIONAL SUMMARY

Software Engineer with around 5 years of experience developing scalable microservices and distributed systems using Java, C#, Spring Boot, and cloud technologies. Proven ability to design high-performance REST APIs, optimize database performance, and build cloud-native applications on AWS and Azure. Experienced in containerized deployments using Docker, Kubernetes, CI/CD automation, and monitoring distributed systems to ensure reliability and scalability. Passionate about building efficient backend services that support high-volume enterprise platforms.

TECHNICAL SKILLS

Programming Languages: Java, C#, Python, JavaScript, TypeScript, SQL, Bash

Frameworks & Libraries: Spring Boot, Spring MVC, JPA, Hibernate, .NET Core, ASP.NET, React, Node.js, Entity Framework, Flask

Cloud & DevOps: AWS (Lambda, EC2, ECS, S3, SQS, DynamoDB, RDS, CloudWatch, IAM, API Gateway), Azure (App Service, Azure Functions, Azure DevOps), Docker, Kubernetes, CI/CD

Databases: MySQL, PostgreSQL, SQL Server, DynamoDB, MongoDB, Redis

Messaging & Streaming: Apache Kafka, AWS SQS, AWS SNS, RabbitMQ

Tools & Technologies: Git, Maven, Gradle, Jenkins, Terraform, Postman, Swagger/OpenAPI, Splunk, REST APIs, Microservices, JUnit, Mockito, Spring Security, Spring Cloud, OpenFeign, Redis, Helm, GitHub Actions, Prometheus, Grafana, OpenTelemetry

AI-Assisted Development: GitHub Copilot, Claude, Prompt Engineering, AI-assisted testing

PROFESSIONAL EXPERIENCE

Senior Software Engineer | Capital One

March 2026 – Present

- Designed and developed Java 17 and Spring Boot microservices for a payment processing platform supporting ACH transfers, bill payments, and internal fund transfers.
- Implemented event-driven payment workflows using Kafka, decoupling payment initiation from processing and settlement and enabling the system to process high-volume concurrent payment requests with minimal service dependencies.
- Built resilient payment processing using idempotency keys, retry mechanisms, and dead-letter queues to gracefully handle duplicate and failed payment requests without manual intervention.
- Optimized PostgreSQL query execution through composite indexing, query plan analysis, and connection pooling, reducing average API response time by 70% and improving throughput during peak transaction windows.
- Integrated AWS SQS, S3, CloudWatch, and RDS to build a reliable messaging pipeline with centralized monitoring, reducing incident detection and resolution time significantly.
- Secured payment APIs using Spring Security with OAuth 2.0 and JWT-based authentication, enforcing role-based access control across all service-to-service and client-facing endpoints.
- Containerized microservices using Docker and deployed to Kubernetes with auto-scaling policies, supporting traffic spikes during month-end payment cycles with zero downtime deployments.
- Leveraged AI-assisted development tools such as GitHub Copilot and Claude to accelerate prototyping, code generation, and debugging, reducing development cycle time by 35% and increasing sprint velocity by 20% while maintaining full code ownership and test coverage.

Software Engineer | State Farm

August 2024 – February 2026

- Designed and developed microservices architecture for insurance claims processing platform using Java Spring Boot and AWS Lambda, handling 10,000+ daily transactions with 99.9% uptime.
- Built high-throughput RESTful APIs in Java and integrated DynamoDB and RDS to support large-scale distributed workloads, reducing query response time by 40% through optimized indexing strategies.
- Implemented React-based user interfaces for policy management dashboard, improving user experience and reducing customer service calls by 25%.
- Deployed containerized applications using Docker and ECS, implementing CI/CD pipelines with AWS CodePipeline and reducing deployment time by 60%.
- Implemented centralized API logging, request tracing, and error-handling mechanisms, reducing production debugging time by 30% and improving system observability.
- Utilized AWS services S3, CloudWatch, and SNS for scalable file storage, monitoring, and notification systems.

Software Engineer | Microsoft

June 2021 – July 2023

- Developed distributed enterprise applications using C# and .NET Core, supporting 5,000+ active users across multiple internal platforms while maintaining high availability and performance standards.
- Designed and implemented scalable ASP.NET Web APIs, integrating Azure SQL Database and improving query efficiency through indexing and optimized data access patterns, reducing response latency by 30%.
- Built responsive frontend components using React and TypeScript, integrating authentication and authorization with Azure Active Directory.
- Leveraged Azure App Service and Azure Functions to deploy and scale cloud-native backend services, enabling efficient handling of variable workloads across environments.
- Implemented CI/CD pipelines using Azure DevOps, automating build, testing, and deployment processes and reducing release cycle time by 40%.
- Optimized backend performance by implementing Redis caching and database query tuning, improving application response time by 35% under high user load.

Junior Software Engineer | Harman

May 2020 – May 2021

- Developed backend services using Java and Spring Boot, designing RESTful APIs to support data integration and application workflows for enterprise systems.
- Built scalable data processing components leveraging AWS services such as S3, EC2, and Lambda, enabling efficient storage and processing of large application datasets.
- Optimized database queries and implemented indexing strategies in MySQL, improving backend service response time by 25%.
- Integrated application services with AWS cloud infrastructure, improving system reliability and reducing deployment configuration issues by 30%.

EDUCATION

Master of Science

University of Cincinnati | Cincinnati, OH

Bachelor of Technology, Computer Science

GITAM University | India

CERTIFICATIONS

Generative AI Fundamentals, Databricks
