

Gowtham Vidiyala

Northlake, TX | 940-299-4376 | shivagowthamkumar.vidiyala@gmail.com

Professional Summary:

- With over 5 years of IT experience in Analysis, Design, Development, Testing and Deployment of various Java/J2EE applications.
- Good Working experience in Design, Development and implementation of several J2EE frameworks like (Model View Controller), spring, Hibernate.
- Experienced working in Java Multithreaded programming to develop multithreaded modules and applications using Completable Future.
- Developed and Designed API's using REST and GraphQL.
- Experience with Java 8 features like Streams, Lambda expressions and Flat maps.
- Hands-on experience in Spring Architecture & Related Technologies: Spring DI/ MVC/ Spring Boot & JDBC, Spring Templates (Spring Hibernate, Spring Rest Templates).
- Involved in all the phases of Software Development Life Cycle including Analysis, Design, Development, Integration and Implementation using Waterfall and Agile Methodologies.
- Extensive experience in fixing the production and enhancements defects and issues.
- Strong problem solving, consultancy skills and initiative-taking and confident approach and holds good leadership skills, managerial and organizational skills.
- Extensively worked on Jenkins by installing, configuring and maintaining the purpose of Continuous Integration (CI) and Continuous Delivery (CD).
- Experience in configuring and using Hibernate and coding DAO components.
- Experienced with frontend technologies like HTML, CSS, JavaScript, Angular, and React JS.
- Proficient in using industry-standard IDEs and Java Tools: Eclipse, Spring suite, IntelliJ and Visual Studio code.
- Hands on Experience with database technologies like Oracle, MySQL & SQL Server, Cassandra.
- Experience with unit testing using Junit, Mockito frameworks.
- Hands on experience in developing UML Diagrams like Class, Use case and Sequence diagrams.
- Good knowledge of version control tools like GITHUB, BITBUCKET and GITLAB.

Academic Qualification

Southern New Hampshire University, NH, USA-	MS in Information Technology	January 2021 – August 2022
Jawaharlal Nehru Technological University Hyderabad	BTECH in Information Technology	September 2013- June 2017

Technical Skills

Languages	Java, C, SQL, Unix shell scripting, HTML, JavaScript and XML.
Frameworks	Spring Boot, Spring Batch, Log4J, Mockito, Angular 6.
Devops Tools	Jenkins, Docker, SonarQube, Fortify, Blackduck, Rancher.
Databases	Oracle, MySQL, Cassandra, MS-Access, MS SQL-Server.
Web Technologies	HTML, Java Script, XML, Angular JS, CSS.
Design Tools and IDE's	IntelliJ, Visual Studio Code, STS, Eclipse, PyCharm.
Build Tools	Maven, Gradle

Project Experience

Bank of America

October 2022 –Present

Java Developer

- Created RESTful web services using the Spring MVC framework on the server side by sending JSON output to the user interface and altering the DOM object on the user interface using HTTP calls and the GET and PUT methods.
- Entity classes were created based on the table structure, and numerous Controllers, Services, and DAO layers were designed to communicate with the data layer.
- used the Singleton, Business Delegate, and Data Transfer Object design patterns to develop the application.
- used JIRA to track bugs and issues.
- Understanding user stories can help you create and offer a solution to the issues with the Microservices architecture.
- JDBC is a standard Java API for connecting and interacting with relational databases. It provides a set of classes and interfaces for database operations.
- Used Maven Build Tool for code compilation and deployment on Tomcat Application Server.
- Creating Spring Microservices and transforming user stories into in-service classes for backend logic,
- CI/CD deployments using Jenkins to build for higher environments were worked on.
- Use JDBC drivers to connect Java applications to specific relational database systems. Drivers are available for popular databases like MySQL, PostgreSQL, Oracle, and SQL Server.
- Used Bitbucket for efficiently managing the source code versions with the development team.

Datanomist

August 2020 – August 2021

Sr. Java/J2EE Developer (Lead Consultant)

- Involved in Analysis, Design, Development, UAT and Production phases of the application.
- Design, Plan, develop, test, implement, and support custom proprietary software applications in various software languages, platforms and environments.
- Created and Implemented Microservices using Spring Boot Services.
- Deploy highly scalable customer facing APIs that can handle requests from mobile apps and which works across all standard browsers and web platforms.
- Used Java 8 features such as Lambda Expression, Functional Interfaces, Stream API, etc.
- Used various Core Java concepts such as Multi-Threading, Exception Handling, Collection APIs.
- Have Good experience with shell scripts, Linux and Unix commands.
- Created/updated the swagger files to configure the definition objects or parameters of service end points.
- Primary focus should be to interpret business requirements and be a part of application development and support. Perform ongoing refactoring of code, ability to debug and fix issues with code, thereby ensuring the application is in good shape from technical standard.

- Responsible for implementing part or all the technical solution to the client, in accordance with an agreed technical design.
- Provides technical support and input on the application of technology to a defined business segment to provide part or all of a detailed technical design which meets customer requirements.
- Experience in writing the HTTP RESTful Web services.
- Integrated Jenkins to git where the build triggers automatically when we push a pull request for CI/CD.
- Conduct user training, performing periodic system updates, interacting with users for future enhancements.
- Worked on CI/CD tool Jenkins to automate the build process from version control tool into testing and production environment.
- Used Bit Bucket for version control tool for merging branches.
- JDBC is a standard Java API for connecting and interacting with relational databases. It provides a set of classes and interfaces for database operations.
- Created docker image for microservices files to orchestrate applications using Kubernetes.
- Establish a database connection using the Connection interface in JDBC. The connection typically requires a URL, username, and password.
- Developed multiple Controllers, Services & DAO layers to interact with the data layer and developed Entity classes based on the table structure.

Environment: Java 8, JavaScript, Spring, Hibernate 4.2, Spring Boot, XML, Maven 3.0, Tomcat 9, Eclipse, IntelliJ. Unix, Kubernetes, Jenkins, Docker, Fortify, BlackDuck, SonarQube, Rancher, Bit Bucket.

Accenture

June 2017 - February 2020

Sr. Java/J2EE Developer

- Developed the application implementing Spring MVC and Hibernate as ORM framework.
- Designed and developed the application using agile methodology and followed Test Driven Development (TDD), Scrum.
- Used Java 8 Lambda expressions and Stream API to support functional-style operations on streams of elements.
- Used Spring Boot, which is radically faster in building cloud Micro Services and develop spring, based application with very less configuration.
- Developed Micro Services & APIs using Spring Cloud, Spring Security, Spring Boot, and Spring Integration.
- Used Gitlab for efficiently managing the source code versions with the development team.
- Used Maven for code compilation and deployment on Tomcat Application Server.
- Used Jenkins for continuous integration and Maven for building the EAR file.
- Hands on experience with various attack prevention and working with relatively large code bases.
- Log4j is used to handle for debugging purposes.
- Written JUnit test cases during the development phase and used assert functions to compare two objects.
- Developed the application using Singleton, Business Delegate and Data Transfer Object design patterns in the project.
- Used Rest Controller in Spring framework to create RESTful Web services and JSON objects for communication.
- Used Postman to test the RESTful API for HTTP requests such as GET, POST, and PUT.
- Used Microservices architecture with Spring Boot based services interacting through a combination of REST and Apache Kafka message brokers.

- Extensively used Eclipse and IntelliJ IDE for developing, debugging, integrating, and deploying the application.
- REST web services are created - Spring with Jackson Mappers exchange data using JSON data structure.
- Unit tested all the classes using Mockito class level and methods level.
- Fixed the bugs in the existing application by tracking in JIRA and Rally.
- Used Maven for dependency management, build applications and deploy to the containers, application servers and create versions in the repository.
- Used JUnit for unit testing of the application and log4j for logging.
- Involved in writing Java API for Amazon Lambda to manage some of the AWS services.
- Object storage service Amazon S3 is used to store and retrieve media files such as images.
- Cloud Watch is used to monitor the application and to store the logging information.
- Amazon EC2 is also used for deploying and testing the lower environments such as Dev, INT and Test.
- implemented Spring boot microservices to process the messages into the Kafka cluster setup.

Environment: Java 8, JavaScript, Spring, Hibernate 4.2, Oracle 12c, Spring Boot, Spring Batch, Spring Actuator, Kafka, AWS S3, AWS Cloud Watch, AWS Lambda Maven 3.0, Tomcat 9, Eclipse, Unix, IntelliJ, Selenium HTML, CSS, Junit, Mockito, SonarQube.
