

# Python Developer

Name: Balaji

Email: [Balajipavuluri29@gmail.com](mailto:Balajipavuluri29@gmail.com)

Phono: 513-828-4710

---

## PROFESSIONAL SUMMARY:

- Around 3 years of IT experience in developing and deploying projects with Python and related frameworks such as Django and Flask .
- Experience in building cloud systems and Microservices. Developed and tested RESTful APIs that work as a middleware between client and third-party APIs, using Python and Postman.
- Solid Knowledge of Objected Oriented Concepts (OOPS), Standard Template Library, Smart Pointers, Data Structures and Design patterns.
- Good experience with AWS services such as EC2, Lambda, DynamoDB, Boto3, Glue, Textract, VPC, CloudWatch, SNS, SageMaker, API Gateway, Athena, IAM, EMR, S3, SQS.
- Solid experience in statistical programming languages like Python, SAS, Apache Spark, MATLAB, RDBMS and knowledge of Big Data technologies like Hadoop, Hive, Pig.
- Hands on experience developing applications using microservices and data engineering with PySpark, especially on data frames, data processing techniques, performance improvement.
- Hands-on experience using software development tools such as Debuggers and Compilers.
- Extensively used Python and Data science Libraries NumPy, Pandas, SciPy, PySpark , Pytest , PyExcel , Boto3 and Beautiful Soup.
- Experience in working with NoSQL databases like DynamoDB, MongoDB, Redis, HBase and SQL databases such MongoDB, MySQL.
- Deployed applications on AWS DevOps tools (CodeBuild, CodeDeploy, CodePipeline) as well GitHub, Maven, SVN, Jenkins.
- Worked in fast paced environments using Agile (Scrum) or Waterfall software development methodologies. Participate in daily scrum meetings and bi-weekly sprint meetings to review the tasks accomplished and plan for upcoming sprints. Perform demo for tasks completed.
- Built ETL pipelines on batch and steaming data using PySpark and SparkSQL.
- Worked with server-side technologies and databases, restful API and MVC design patterns.
- Experience in Database Administration, development, design, maintenance, and production support of relational databases (RDMS), business applications. MySQL Server installation, upgrade, and migration.
- Experience with implementing web services using protocols such as SOAP, REST.
- Hands-on experience developing Lambdas with Python for AWS infrastructure automation.
- Designed the application's frontend using Python 2.7, 3.6, HTML, CSS, JSON, and jQuery.
- Certainly! Please provide me with the text selection that you want me to correct, and let me know what specific changes or corrections you would like me to make.

## TECHNICAL SKILLS

|                               |                                                      |
|-------------------------------|------------------------------------------------------|
| <b>Programming Languages:</b> | Python, Java, JavaScript.                            |
| <b>Python Libraries:</b>      | NumPy, Pandas, Requests, PySpark, Tkinter, boto3.    |
| <b>Web Technologies:</b>      | CSS, HTML, XML, JavaScript.                          |
| <b>Frameworks:</b>            | Django, Flask, Robot, Manual testing.                |
| <b>Databases:</b>             | DynamoDB, MongoDB, Oracle, Redis, MySQL.             |
| <b>Reporting Tools:</b>       | Tableau, PowerBI, SAS.                               |
| <b>IDE's:</b>                 | PyCharm, PyDev, Jupyter, Visual Studio Code.         |
| <b>Testing Frameworks:</b>    | Unit Test, Pytest Junit, TestNG, PyUnit, ROBOT, JXL. |
| <b>Bug Tracking:</b>          | Siebel Help Desk, JIRA, ClearQuest.                  |
| <b>Version Controls:</b>      | GitHub, Bitbucket.                                   |

## PROFESSIONAL EXPERIENCE:

Client: Amat, Rochester, New York

Jul 2023 - Present

Role: Python Developer

### Responsibilities:

- Developed the back-end web services using Python and flask REST framework using JWT.
- Managed storage in cloud using Elastic Block Storage (EBS), S3, created Volumes and configured Snapshots.
- Integrated Apache Kafka with Elasticsearch using Kafka electric search connector to stream all messages.
- Designed and developed applications using Python with Django framework. Implemented code in Python to retrieve and manipulate data.
- Experience working Graph APIs via client-side JavaScript or server side via Node.js. Developed web applications using react.js, D3.js, jQuery. Used frameworks such as Bootstrap and Angular.
- ETL pipelines in and out of data warehouse using combination of Python and Snowflakes Writing SQL queries against Snowflake.

- Created Spark Streaming jobs using Python to read messages from Kafka & download JSON files from AWS S3 buckets.
- Written python scripts integrating Boto3 to supplement automation provided by Ansible and Terraform for tasks such scheduling lambda functions for routine AWS tasks.
- Involved in developing Python microservices which are interconnected in the AWS cloud also involved in consuming and building web services both and SOAP and RESTful.
- Worked on data cleaning to ensure data quality, consistency, integrity using Pandas, NumPy.
- Responsible for User Management, Plugin Management and End-to-End automation of Build and Deployment process using Jenkins.
- Experience working on Chef/Puppet as Configuration management tool, to automate repetitive tasks, quickly deploy critical applications, and proactively manage change.
- Experience with Snowflake cloud data warehouse and AWS S3 bucket for integrating data from multiple source system which include loading nested JSON formatted data into snowflake table.
- Performed SQL queries using AWS Athena to analyse data in AWS S3 buckets.
- Developed Automation Regressing Scripts for validation of ETL process between multiple databases like AWS Redshift, Oracle, Mongo DB, T-SQL, and SQL Server using Python.
- Generated graphical reports using python package NumPy and matplotlib.
- Designed and maintained databases using Python and developed Python based API (RESTful Web Service) using Flask, SQL Alchemy and PostgreSQL.
- Develop Python microservices with Flask framework for Confidential & Confidential internal Web Applications.
- Automating the build, deployment (CI/CD) of Front-End applications, Middleware and Database components using Jenkins.
- Added support for Amazon AWS S3 and RDS to host static/media files and the database into Amazon Cloud.

**Environment:** Python 3.6, 3.9, SQL, PowerShell, SOAP, REST, PySpark, PyCharm, AWS, Jira, Git, Jenkins, Pylint , PEP-8.

**Client: Nationwide, Columbus, OH**

**Jan 2023 – Jul 2023**

**Role: Python Developer**

**Responsibilities:**

- Implemented Business logic, worked on data exchange, processed XML and HTML using Python and its familiar framework Django.
- Involved in development of Web Services using and REST for sending and getting data from the external interface in XML and JSON format
- Involved in various phases of the project like Analysis, Design, Development, and Testing.
- Used Python IDE's such as PyCharm, sublime text for developing the code and performing unit test and SIT.
- Proven strong experience with databases (NoSQL and RDMS) and good SQL Skills.
- Integrated and managed services like mongo dB, MySQL servers with Azure Kubernetes Services.
- Developed Python Project, which is used for handling data using OOPS concepts, PANDAS, NUMPY, Bitbucket.
- Worked with Passport and JSON web tokens for authentication and authorization security configurations using Node.js.
- Design and Develop ETL Processes in AWS Glue to migrate data from sources like S3, ORC/Parquet/Text Files into AWS Redshift. Supported the development of services for Business users.
- Configuring auto scalable and highly available microservices set with monitoring and logging using AWS, Docker, Jenkins.
- Wrote python scripts to manage AWS resources from API calls using BOTO SDK and worked with AWS CLI.
- Conducted ETL Data Integration, Cleansing, and Transformations using AWS glue Spark script.
- Created Proof-of-concept using responsive web design, Node.js, HTML and CSS.
- Performs day-to-day, after-hours, tactical, and strategic efforts associated with ServiceNow.
- Used Pandas API to put the data as time series and tabular format for east timestamp data manipulation and retrieval.
- Designing, implementing, and maintaining solutions for using Docker, Jenkins, Git, and Puppet for microservices and continuous deployment.
- Extensive experience in implementation of change request process and defect management process
- Developed Restful Microservices using Flask and deployed on AWS servers using EBS and EC2.
- Developed the back-end web services using Python REST framework.
- Implementation exposure on service based, SOAP, RESTful technologies.
- Wrote scripts in Python for Extracting Data from JSON and SIP text files.
- Developed modules in python that are used for cross environment in Windows

**Environment:** Python 2.7, 3.6, SOAP, REST, PyCharm, Azure, MongoDB, AWS, ECS, Jira, Git, Jenkins

**Client: People Tech Inc, India**

**Mar 2021 – Jul 2022**

**Role: Python Developer**

**Responsibilities:**

- Developing Microservices and creating APIs with Python Django framework using Jenkins as a build tool and enterprise level database.
- Developed tools using Python, Shell scripting, XML to automate some of the menial tasks, modified existing Perl scripts to Python.
- Designed, developed, and implemented the ETL pipelines using python API (PySpark) of Apache Spark on AWS EMR.

- Developed test scripts using Python and Robot framework for automation purposes.
- Migrated quality monitoring tool from AWS EC2 to AWS lambda and built logical datasets to administer quality monitoring on data warehouses.
- Decent experience in UNIX in developing the application and familiar with all its commands.
- Experienced with Unit Testing, Functional Testing and Regression Testing on the embedded software for Powertrain modules which includes Application layer and core Features.
- Understanding of message queuing, stream processing, and highly scalable 'big data' data stores.
- Created data base tables, functions, stored procedures and wrote prepared statements using PL/SQL.
- Optimized the PySpark jobs to run on Kubernetes Cluster for faster data processing.
- Designed, built and deployed application using the AWS stack along with docker, Kubernetes orchestration container focusing on high-availability, fault tolerance and auto-scaling.
- Designed applications which use caching database Redis, to access backend database.
- Developed multi-threaded standalone app in Python and PHP to view performance.
- Developed the back-end web services using Python and Django REST framework.
- Designed and maintained databases using Python and developed Python based API (RESTful Web Service) using Flask, SQL Alchemy and PostgreSQL.
- Used Python Library to write fully functioning test automation process that allowed the simulation of embedded controllers.
- Developed and tested many features for dashboard using Python, CSS, JavaScript and jQuery.
- Used JIRA for requirements and test case management in the agile software methodology.
- Experience with SQL/NoSQL databases to manage and analyze large data sets.
- Created and managed fully automatic CI/CD pipelines for Jenkins's code deployment.
- Strong experience writing API's/ and Web Services in python.
- Used Python based GUI components for the front-end functionality such as selection criteria.
- Performed Code optimization and rewriting the database queries to resolve performance related issues in the application.
- Developed GUI using webapp2 to dynamically display the test block documentation and other features of Python code using a web browser.
- Worked on creating automation scripts leveraging various Python libraries to perform accuracy checks from various sources to target databases. Decent experience in UNIX in developing the application and familiar with all its commands.
- Reviewing, Modifying, and sending the Status Report consisting of the Bug reports, defect logs, effort estimates, and the other deliverables to higher management. Worked on UI using HTML5, CSS3 and Java Scripts.
- Interacting with Users, Business Analysts and gathered business and technical requirements, reviewed business requirements, technical requirements, and specifications. Experience leveraging automation and scripting using PowerShell, Perl, batch.

**Environment:** Python 3.4 , Django, UNIX, Linux, PowerShell, PySpark , MySQL, AJAX, SOAP, jQuery, JavaScript, Bootstrap, PyCharm, AWS (Lambda, DynamoDB, boto SDK, EC2, S3, RDS), SQL, Linux, Shell Scripting, C , SQL Server , GIT.
