

PABBATHI REDDY AKHIL REDDY

Java Full Stack Developer

+1 (802) 265-(1416) | akhilreddypabbathireddy03@gmail.com

Linkedin-www.linkedin.com/in/akhil-reddy-dev

PROFESSIONAL SUMMARY

I have Over 10+ years of extensive Full Stack Development experience with a focus on Microservices architecture. Proficient in Java/J2EE environments, adept in designing responsive web applications, and well-versed in DevOps practices.

- Strong command of Core **Java** including collection frameworks and Multithreading.
- Experience in developing **web, enterprise and SOA applications using Core Java, OOAD, Multi - Threading, JavaBeans, JSP, Servlets, JNDI, JDBC, Hibernate, JPA, Spring, Web Services (SOAP, Restful and Micro-Service), XSD, XML, XSLT, JSON, JAX-B, Apache Commons, EJB, JMS, MQ-Series, HTML, Ajax, Oracle, and Linux/UNIX.**
- Proficient in object-oriented programming with **Java, Go-lang** and other languages.
- Demonstrated mastery of **J2EE** Design Patterns, such as MVC Architecture, Singleton, Session Facade, Business Delegate, and Data Access Object.
- Provided expertise in **Java/JEE, JSF, Web Services**, and the **IBM Portal/WebSphere** Application development software for the analysis, design, development, and code review of enterprise applications.
- Proficiency in developing software applications using **Java 11**, including object-oriented programming, multithreading, and distributed computing.
- Used **JAVA 8** features like **Lambda Expressions, Parallel Streams and functional interfaces.**
- Extensive usage in **Core Java** involving concepts like Collections, Multithreading, Data Structures, Algorithms, Exception Handling and Polymorphism.
- Goal Driven Developer with comprehensive understanding of various software development approaches such as **SDLC, Waterfall** and **Agile Scrum** methodology.
- Successfully executed solutions using **EJB 3+**, optimizing application performance and maintainability.
- Extensive experience in developing web applications using **Spring Boot, Spring Core, Spring MVC, Spring ORM, Spring JPA, Spring Rest and Spring Cloud (PCF).**
- Led the development of full-stack web applications using **Java, Node.js**, and **JavaScript/TypeScript.**
- Designed and implemented RESTful and **GraphQL** APIs, adhering to **OpenAPI** specifications and **HTTP** protocols.
- Developed Application based on J2EE using **Hibernate, spring, JSF frameworks and SOAP/REST web services**, Web Sphere Integration Developer (WID) Tool to develop **WPS** components.
- Proficient in web development technologies: **HTML5, CSS3, JavaScript**, and **AJAX.**
- Expertise in developing Single Page Applications (SPA) with **MVC architecture** such as **Angular 9, Angular 14.**
- Worked on some of the new features of **Angular 9/10** like new if else syntax, ng-templates, and form validators.
- Developed User Interface and web page screens using **JSF, AJAX, JavaScript**, and **AngularJS.**
- Expertise in UI development using **React, TypeScript, ES6**, and **jQuery.**
- Developed SPA using **React, Flux**, and **React Router.**
- Experience with **Apache Flink's** batch processing capabilities, enabling efficient and scalable data processing for large datasets.
- Extensively worked on **Spark** using Scala on cluster for computational (analytics), installed it on top of **Hadoop** performed advanced analytical application by making use of **Spark** with **Hive** and **SQL/Oracle.**
- In The organization I have achieved **CMMI Level 3 certification**, by showcasing my commitment to process maturity and quality standards.
- Expertise modes and managing **DynamoDB** tables, including defining key schema, provisioned and on-demand capacity modes, and configuring global and local secondary indexes.
- Implemented data models and storage solutions using **MongoDB** and **Cassandra** to handle large volumes of data, ensuring data integrity and availability.
- Developed Single Page Applications using **Vue JS** and implemented custom directives.
- Responsible for creating and maintaining architecture for **Restful API** using Spring Boot.
- Implemented **AWS Lambda** functions to automate various tasks, such as image processing, file uploads, and data validation.
- Managed **AWS** resources including **EC2, S3, Auto Scaling, DynamoDB, IAM, ELB, CloudWatch, SNS, SQS, and RDS.**
- Helped migrating and managing multiple applications from on premises to cloud using AWS services like **Glacier, SES, Cloud Formation, VPC.**
- Used **Docker** to create images that are deployed on AWS as Micro services.
- Hands on experience in developing both **SOAP (JAX-WS)** and **RESTful (JAX-RS)** Web Services.
- Hands-on experience with RXJS observables for asynchronous communication with **RESTful APIs.**
- Ensured dynamic service discovery and load balancing using **Netflix Eureka** or **HashiCorp Consul.**
- Expertise in unit testing tools for **JavaScript** frameworks like **Karma** and **Jasmine.**
- Hands on Experience with **Graphite** and **Grafana** for monitoring the data.

- **Java Framework** Integration using **Apache** Camel. Experience with **Struts** and **Spring** for MVC-based web apps.
- Created CI/CD pipelines in **Azure DevOps** for automated build and delivery.
- Worked with **Azure Kubernetes** Service and configured **App Insights**.
- Extensive experience in using **NPM, BOWER, Grunt** and **Gulp** for the build process.
- Expertise in **Hibernate** for object-relational **mapping**.
- Experience in implementing dynamic web applications using **IBM WebSphere, Web Logic**, and **Tomcat Application Servers**. Logging using **Log4j Framework, SLFJ**.
- Proficient in configuring **Web Logic Server, Apache Tomcat, and JBoss**.
- Skilled in database modeling, administration, and development using **SQL, T-SQL, PL/SQL** in Oracle, and **SQL Server**.
- Hands-on experience with source control tools like **CVS, SVN, Git**, and **Bitbucket**.
- Operating Systems: Windows, Unix/Linux.

SKILL SET

Language	Java, Golang, C/C++, SQL, and PL/SQL
Enterprise Java	Java, J2EE, JDBC, JSP, JPA, Java Beans, Spring, Sockets, Swing, RMI, Servlets, JSTL, JSF, Struts, EJB, JTA and JNDI.
Tools & Framework	Spring Boot, Spring MVC, Spring Web Flow, Spring IOC, Spring AOP, JSF, Log4J, SOA, Jasper reports, SOAP UI, Spring Batch, Spring Security, and Spring Data
Databases	Oracle, MySQL, Cassandra, MongoDB, NoSQL Sybase, SQL Server, PostgreSQL, DB2, and MS Access 2000
Web Development	HTML, DHTML, XML, CSS, jQuery, JavaScript, AJAX, Bootstrap, JSON, Angular 9/10, Angular 11/14, React JS, Node JS, Express JS, Angular JS
Scripting Language	TypeScript, Shell Script, bash, Perl, JavaScript
Web/ App Servers	Web Sphere, Apache Tomcat, Apache HTTP Server, JBoss, WebLogic UST global
Message Brokers	Apache Kafka, RabbitMQ, Apache ActiveMQ, Amazon Kinesis
Tools	IntelliJ, VS Code, MySQL Workbench, Eclipse3.0, Net Beans5.0, Clear Case, Clear Quest, CVS, SVN, Perforce, Sub Version, Dream weaver 2000, Edit plus, JUnit, JMeter, Maven, Gradle, Apache Spark
DevOps Tools	GitLab, GitHub, Bitbucket, Maven, Jenkins, Docker, Kubernetes, Slack, AWS Cloud Computing and Storage, Azure Cloud Computing and Storage, Google Cloud Platform Cloud Computing and Storage, Splunk Cloud, ELK (Elasticsearch, Logstash and Kibana), Terraform, Jenkins, Spunk
Web Services	RESTful, SOAP, UDDI, WSDL, JAX-RPC, JAX-RS JAX-WS, JAX-B, Apache Axis2, Apache CFX, MQ
Version Control	GIT, SVN, Microsoft TFS, Rational clear case

EDUCATION:

- Bachelor of Technology from Gandhi Institute of Technology and Management Hyderabad, India.

WORK EXPERIENCE:

American International Group (A.I.G), New York, NY.

Role: Full Stack Developer / Feb 2023- till date

Responsibilities:

- As a Full Stack Developer at AIG, I've been responsible for crafting robust and innovative software solutions by utilizing a diverse set of technologies and tools. My role has encompassed the entire software development lifecycle, from designing responsive user interfaces to implementing complex microservices architectures.
- Participated in Agile Scrum teams, contributing to the development process and ensuring alignment with Agile principles.
- Assisted with day-to-day support and troubleshooting customer issues for a set of custom applications written in Java 11 and other related platforms and IT Controls work.
- Involved in developing and migrating applications to Java 17 platform.
- Experience with Java 17 features, such as lambda expressions, the Stream API, and functional interfaces.
- Applied Java 11 and Java 17 features for concurrent and parallel programming, optimizing application performance in a multi-threaded environment.
- Explored the Foreign Function and Memory API of Java 17, which facilitates interactions with native code and efficient memory management.
- Implemented scalable and modular web applications using the Spring MVC framework, facilitating the separation of concerns and promoting clean architecture.
- Applied the principles of Inversion of Control using the Spring IOC container, promoting loose coupling and improved maintainability of the application.
- Developed batch processing applications using Spring Batch, facilitating the efficient processing of large datasets and scheduled tasks.
- Utilized Spring Boot to develop microservices, ensuring lightweight and efficient deployment.
- Designed and implemented a microservices architecture, breaking down monolithic components into independently deployable and scalable services.
- Designing and developing Restful API and services using best practices to interact within the Microservices and with the front end.
- Used Web Services like SOAP protocol in JAX-WS and RESTFUL web services.
- Utilized frameworks like Spring Boot, Node.js, and .NET Core to develop microservices.
- Spearheaded in development of server-side applications using Node.js, JavaScript, and TypeScript.
- Utilized Angular 14 Material to implement a consistent and modern design system for the application, improving visual appeal and usability.
- Used Angular 14, HTTP to retrieve data through Web API from Entity Framework.
- Worked on Angular 14 Virtual Dom and angular views, rendering using components which contains additional components called custom HTML tags.
- Upgraded to Angular 11 and Typescript 2.1 and used browser animations, Render 2, email attribute in form validation.
- Used Spring Kafka API calls to process the messages smoothly on Kafka Cluster setup.
- Implemented Kafka producer and consumer applications on Kafka cluster setup with help of Zookeeper.
- My expertise in ORM frameworks and JPA Hibernate to develop efficient and scalable database solutions for organizations seeking to optimize data management.
- Experience identified, assessed, and mitigated project risks using CMMI Level 3 practices, contributing to more predictable project outcomes.
- Hands-on experience in automating unit tests using JUnit for Java applications.
- Implemented parameterized tests in JUnit to efficiently test multiple input scenarios with a single test case.
- Stored data in AWS S3 and leveraged other AWS services for efficient storage and management.
- Helped migrating and managing multiple applications from on premises to cloud using AWS services like Glacier, RDS, SQS, SNS, Cloud Formation, and VPC.
- Deployed Docker containers on various platforms, including AWS EC2 and Kubernetes clusters.
- Familiarity with serverless architecture using AWS Lambda for executing Java functions, optimizing performance, and reducing infrastructure management overhead.
- Configuring and managing AWS S3 buckets, including setting up access controls, versioning, and logging to ensure security and compliance.
- Managed and optimized DynamoDB databases for efficient data storage and retrieval.
- Leveraged Dynamo DB to create efficient and highly available NoSQL databases for various projects, achieving data consistency and low-latency response times.
- Utilized JPA-Hibernate to interact with databases, reducing boilerplate code and simplifying complex queries.
- Designed and maintained relational databases using Oracle and SQL, ensuring optimal performance, data integrity,

and efficient query execution.

- Integrated Cassandra with Java applications, utilizing the DataStax Java Driver for seamless communication.
- Conducted performance tuning activities to optimize Cassandra database operations and enhance overall system performance.
- Utilized Apache Spark to process large-scale datasets, enabling efficient data transformation and analysis.
- Implemented real-time data processing using Spark Streaming for continuous data ingestion and analytics.
- Utilized Maven for project management and build automation, ensuring consistent and manageable builds.
- Used Maven for project management and build automation and Continuous Integration is done using Jenkins.
- Implemented K8s operator to create, configure and manage instances of complex applications on behalf of Kubernetes users.
- Leveraged Splunk for log and performance monitoring, troubleshooting, and optimizing application performance, ensuring seamless user experiences.
- Utilized UML to model software components and visualize system architectures.
- Executed end-to-end tests using tools like Selenium, Cypress, and Enzyme to validate application functionality.
- Ensured protection against serialization attacks using JVM-wide filter factory.
- Implemented Git/GitHub for version control and maintained a robust development workflow.
- Implemented continuous integration and delivery practices within the Agile framework, ensuring regular and consistent delivery of new features and improvements.

Technologies & Tools: Java 11/17, Spring Boot 2.x, Restful, Spring Cloud, Jax, AWS, Lambda, VPC, Splunk, Cloud Foundry, Angular14, Jira, REST API, Kubernetes, Maven, GIT, DB2, Docker, IAM, Kafka, ORM, SOAP, JPA and Microservices. AWS, Reactive programming, Apache Spark, SQL, NoSQL, and Cassandra.

T- Mobile, Seattle, Washington.

Role: Full Stack Developer/ Dec2021-Jan 2023

Responsibilities:

- Involved in all phases of Software Development Life Cycle including requirement, analysis, design, development, testing, release of the project and support.
- Designed and developed the application using agile methodology and followed Test Driven Development (TDD), Scrum.
- Performance tuning on JIRA by deleting inactive workflows, screens, field configuration not associated with any project.
- Transformed a monolithic application into a microservices architecture by leveraging Spring Boot and adhering to the 12-factor app principles. Orchestrated deployment, scaling, configuration, and the authoring of manifest files for multiple microservices within the Azure cloud environment.
- Leveraged the features of Java 8, including lambda expressions and streams, to write clean and concise code for efficient backend development.
- Consumed SOAP services and parses XML to Java 8 Objects.
- Implemented caching strategies using Spring Cache, optimizing data retrieval, and enhancing the performance of network applications.
- Used Spring Constructor Dependency Injection for injecting the object dependencies.
- Designed and implemented RESTful APIs using Spring MVC, facilitating communication between frontend and backend components within the network domain.
- Services (JAX-WS) to interact with external systems. Involved in writing client code for invoking SOAP based web services.
- Created comprehensive API documentation for Node.js APIs, facilitating smooth integration with other components and promoting collaboration among developers.
- Implemented WebSocket communication using Node.js to enable real-time, bidirectional communication between clients and servers for network-related features.
- Developed web applications running on NodeJS using the Express framework and Tomcat Server.js.
- Highlight your experience in using Node.js for server-side development, emphasizing its role in building scalable and high-performance applications.
- Used React.JS for creating views to hook up models to the DOM and synchronize data with the server as a SPA.
- Utilized Enzyme's shallow rendering technique to isolate and test individual React components, improving test efficiency and focus.
- Creating complex forms and data entry interfaces with React, emphasizing the ability to manage form state efficiently.
- You've utilized React for creating CMS interfaces, enabling users to manage and update content efficiently.
- Implemented various screens for the front end using React.js and used various predefined components from NPM (Node Package Manager) and redux library.
- Developed Single Page Applications (SPA) using ReactJS, TypeScript, HTML5, CSS3, and Bootstrap.
- Utilized JavaScript's AJAX (Asynchronous JavaScript and XML) to make asynchronous requests to APIs and fetch data from servers.

- Configured Azure Virtual Networks to establish a secure and isolated network environment for the application, ensuring data privacy and network security.
- Implemented Azure DevOps or Azure Pipelines for Continuous Integration and Continuous Deployment (CI/CD), automating the build, testing, and deployment processes.
- Experience in automating the infrastructure Azure use platform-as-a-service web services.
- Deployed end-to-end event-driven microservices architecture using Apache Kafka and integrated with Elasticsearch. Implemented REST API web service to fetch data from MongoDB.
- Automated regression tests improve efficiency and reduce manual testing efforts.
- Executed parallel browser testing on various machines using Selenium Grid and performed cross browser testing.
- Involved in continuous integration and DevOps methodologies such as Docker, Kubernetes, Jenkins, Gradle, Jenkins File, Docker File.
- Developed CI/CD system with Jenkins on Kubernetes environment, utilized Kubernetes and Docker for the runtime environment for the CI/CD system to build, Test and Deploy.
- Integrated JUnit tests into continuous integration pipelines like Jenkins, Travis CI to automate testing processes and catch issues early in the development cycle.
- Working Experience in Messaging Platforms such as RabbitMQ.
- Create external tables with partitions using Hive.
- Integrated Node.js applications with databases, both SQL and NoSQL, for efficient data storage, retrieval, and management within the context of network systems.
- Plans and coordinates the administration of PostgreSQL databases to ensure accurate, appropriate, and effective use of data, including database definition, structure, documentation, long - range requirements, and operational guidelines.
- Responsible for configuring, integrating, and maintaining all Development, QA, Staging and Production PostgreSQL databases within the organization.
- Developed Splunk reports that provide a high-level overview of the Application Health.
- Daily meeting with different IAM teams and report new/pending IAM issues and concerns.
- Used Git as a version control for maintaining versions of the application.
- Used Postman/ARC for testing and developed JUnit Test cases to test the services availability.

Technologies & Tools: Java8, Spring Boot 2.x, Restful, Spring Cloud, Jax, Azure, CSS3 Lambda, CI/CD Pipelines, VPC, Splunk, Cloud Foundry, ReactJS, Jira, REST API, Kubernetes, Maven, GIT, Docker, IAM Kafka, SOAP, JPA and Microservices, PostgreSQL.

PRA Health Science, New Jersey.

Full Stack Developer / May 2020 – Nov 2021

Responsibilities:

- Designed and developed new applications and existing system enhancements for a complex project.
- Designed and implemented highly available and scalable multitier applications using Object Oriented and Service Oriented Architecture, ensuring robust and reliable software solutions.
- Participated in requirements gathering and analysis to design coding, testing and deployment.
- Worked on Agile methodology including team-based design and code reviews.
- Developed Application based on J2EE using Hibernate, spring, JSF frameworks and SOAP/REST web services, Web Sphere Integration Developer (WID) Tool to develop WPS components.
- Experience with web/application servers Web Sphere, Web Logic, Jetty, JBoss.
- Java with Concurrent API is used extensively for parallel processing and chunk processing.
- Spring is used for dependency injection (DI) and Hibernate framework is used for persistency.
- Spring Batch Item Reader, Item Processor, Item Writer used to process files.
- Implemented Azure API Management to expose APIs securely, manage API lifecycle, and monitor usage and analytics.
- Developed custom directives, factories, and services in Angular 10, adhering to coding standards, and utilized Core Java features, including exceptions and collections.
- Expertise in consuming RESTful web services using Node.js, Angular 10, and jQuery, along with JSON parsing, to implement AJAX calls and render response data on the User Interface.
- Implemented Angular 9 Routing to enable navigation and URL management within the application, improving user engagement and SEO.
- Developed custom directives, Factories and Services in Angular 10 and implemented code per coding standards and created Angular10 Controller to isolate the scopes to perform operations and extensively used Core Java such as Exceptions, and Collections.
- Experience with web/application servers Web Sphere, Web Logic, Jetty, JBoss.
- Set up Jest as part of the build process using tools like webpack, and npm scripts.
- Integrated Jest with continuous integration (CI) tools like Jenkins, Travis CI, or GitLab CI/CD.
- Configuring networking for Docker containers to enable communication between containers and with external

services.

- Creating Docker networks, defining container network aliases, and exposing container ports for inter-container communication.
- Integrated GraphQL with existing Java frameworks and technologies such as Spring Boot, Hibernate, or JPA (Java Persistence API).
- Implemented database indexing strategies to optimize query performance and reduce disk I/O, resulting in faster response times for user requests.
- Experience in bulk data loading and migration processes, leveraging DynamoDB's import/export tools or custom scripts to ensure smooth data transfer.
- Implemented Azure Functions, serverless computer service, to handle event-driven tasks and perform background processing.
- Leveraged Azure Storage services, such as Blob Storage or Azure SQL Database, for efficient data storage, retrieval, and management.
- Drools rules engine is used to validate input data and enrich the data format required by external system.
- Enabled accurate data manipulation and SQL data updates using service classes and implemented client-side input validation and back-end business logic.
- Leveraged Cassandra's horizontal scalability to handle growing amounts of data, ensuring system performance and responsiveness.
- Implementing advanced deployment strategies, such as canary deployments or A/B testing, using Kubernetes features like Istio or traffic splitting.
- Used JMS for Asynchronous messaging.
- Excellent experience in validating query execution plans & tuned queries using Indexes, Views and Batch processing.
- Used Ant tool to build & deploy the application on the server.
- Deployed the application in UNIX machine and used FTP to see the logs etc.
- Worked and Planned Delivery Strategy and Rollout Strategy with UAT and Prod Teams.

Technologies & Tools: Java8, STS, Spring Boot, Spring Integration, Spring Batch, Spring Rest, Spring AOP, SQL, IBM MQ, JMS, Web Services, Azure, Angular 9, Eclipse, Maven, Jenkins, Restful, JIRA, Oracle, JUnit, SVN, Linux, Stream APIs, Azure App Service.

JPMorgan Chase & Co – New York, NY

Full Stack Developer/ Jun 2018 – May 2020

Responsibilities:

- Gained more knowledge on different banking internal applications while involved in business requirements meetings. Especially collateral management system in Investment banking.
- Proficiently designed, developed, and maintained applications using a monolithic architecture, consolidating all components into a tightly integrated codebase.
- Expertise in working with single codebases, unifying user interface, business logic, and data access layers to create a cohesive application structure.
- Demonstrated expertise in building RESTful APIs and communication protocols to facilitate seamless interaction between microservices, enabling efficient inter-service communication and data exchange.
- Proficiently utilized Java 8 features such as lambda expressions, parallel operations on collections, multithreading, and effective sorting mechanisms.
- Employed Streams and Lambda expressions from Java 8 to store and process data efficiently.
- Analyzed SOA-based applications with Solar, web services, and Apache Ignite cache-based systems for optimal design and usage.
- Experience in implementing Microservices and SOA with XML-based web services (SOAP/UDDI/WSDL) using Top-Down and Bottom-Up approaches.
- Worked with the Spring framework and Hibernate integration to maximize the Classical Model-View-Controller (MVC) architecture.
- Implemented Spring Boot Actuator for real-time monitoring and management of application health, metrics, and other operational aspects.
- Leveraged Spring Boot's caching mechanisms, such as @Cacheable and @CacheEvict, to enhance application performance and reduce database load.
- Utilized Spring Boot's integration with Spring Cloud to implement microservices architectures, leveraging features such as service discovery, circuit breaking, and load balancing.
- Developed a new front-end with the latest web technologies, including HTML5, CSS3, JavaScript, jQuery, Bootstrap, Angular as the core front-end development environment.
- Used Angular 6 to create views to hook up models to the DOM and synchronize data with server as SPA.
- Developed reusable and modular Angular 6 components, such as directives, pipes, and services, to improve code maintainability and scalability.

- Utilized modern JavaScript testing frameworks like Jest and Jasmine to rigorously test and validate code, maintaining high code quality and reliability.
- Proficiently configured and executed Gulp tasks within the Node.js runtime, managing tasks such as CSS pre-processing, minification, test running, and building synchronization
- Proficient in utilizing AWS services such as EC2, S3, Lambda, RDS, and others to design and implement scalable and reliable solutions.
- Hands-on experience deploying Java applications on AWS, managing instances, and ensuring high availability.
- Implementing Auto Scaling groups to automatically adjust the number of EC2 instances based on demand, ensuring scalability and cost optimization.
- Integrating Java applications with AWS IoT services for building scalable and secure Internet of Things (IoT) solutions.
- Implementing IAM policies and roles to manage access control for AWS resources, ensuring the principle of least privilege for Java application components.
- Knowledge of containerization using Docker for packaging and deploying Java applications, and orchestration with AWS ECS or EKS.
- Implemented Apache Kafka, a distributed event streaming platform known for its high throughput and fault tolerance, to enable efficient data communication across various applications and services.
- Designed and implemented NoSQL data models in Cassandra to efficiently store and retrieve data.
- Pioneered the adoption of Continuous Integration/Continuous Deployment (CI/CD) practices for Guidewire application development, resulting in faster releases and improved team productivity.
- Worked with MongoDB to store non-relational data into collection and retrieve them whenever required.
- Extensive experience in designing, developing, and deploying microservices architectures, enhancing system scalability, maintainability, and enabling independent service development and deployment.
- Highly skilled in containerization technologies like Docker and container orchestration platforms such as Kubernetes, streamlining the deployment and scaling of microservices in dynamic environments.
- Implemented SOAP Services (JAX-WS) to interact with external systems. Involved in writing client code for invoking SOAP based web services.
- Conducted comprehensive Service Level Testing for web services using tools like SoapUI, Postman, and Apigee.

Technologies & Tools: JavaScript, Java/J2EE, JBoss, Spring Core, Spring MVC, JMeter, Hibernate, Angular, ReactJS, BackboneJS, Apache Kafka, HTML5, CSS3, RESTful Web Services, NodeJS, Bootstrap, JMS, jQuery, Jenkins, Oracle, AWS, Microservices.

Open box Solutions, Hyderabad, India.

Full Stack Developer / Aug 2015-Nov 2017

Responsibilities:

- Implemented Different Design patterns like singleton, factory and J2EE design patterns like Business delegate, session facade, Value object and DAO design patterns.
- Used Spring Framework's IOC Dependency Injection to inject Service Object using Service Locator Design Pattern into Action Classes.
- Used Struts tag libraries in the JSP pages.
- Developed a controller Servlet that dispatches requests to appropriate Action Classes.
- Developed the application under J2EE Architecture using spring, Struts, Hibernate, Servlets, Web logic and JSP.
- Used Jenkins as a build tool for CI/CD (Continuous Integration and continuous deployment) process.
- Used Node.JS to resolve dependencies via React JS, typescript, jasmine.
- Good Knowledge in coded Java applications on both client-side and server-side using JDBC and advanced Multithreading.
- Demonstrated the ability to harness the power of EJB 3+ to enhance application modularity, transaction management, and messaging capabilities.
- Strong development skills in designing and developing Micro services along with Spring Boot and Coherence cache implementation.
- Proficient in designing and implementing data models in DynamoDB to efficiently store and retrieve data, ensuring optimal performance and scalability.
- Experience in configuring and managing backups and restores in DynamoDB to safeguard against data loss and meet compliance requirements.
- Front end development utilizing HTML5, CSS3, and JavaScript leveraging the Bootstrap framework and a Java backend.
- Experience with Java 8.0 features such as lambda expressions, Parallel operations on collections and for effective sorting mechanisms and new Date Time API.
- Used Java Persistence API (JPA) and hibernate for performing the Database Transactions.

- Used join point and advice Spring AOP modules for cross cutting concerns and IOC for dependency injection.
- Designed extensive additions to existing Java Web Application utilizing Service Oriented Architecture (SOA) techniques.

Technologies & Tools: Java /JDK1.8, JSP, Servlet, EJB, spring, JavaScript, Hibernate, Multithreading, Query, Struts, Design Patterns, HTML5, CSS3, JMS, XML, Eclipse, Apache, Oracle ECM, Java 8.0, Struts.

Integrated Personnel Services Limited, India.

Java Developer / Oct 2013-Jul 2015

Responsibilities:

- GUI Development using Struts Framework, developed graphical user interfaces (GUIs) using Java Server Pages (JSP) and the Struts framework.
- Created Action forms and Action classes using the Struts framework to effectively handle user requests.
- Implemented Struts Bean Tags, Logical Tags, and Display Tags in JSPs to enhance the user interface.
- Data Layer Development, coded Entity Beans to manage data persistence within the Data Layer.
- Developed user interface components for Deal and Activity modules, integrating them with the corresponding business logic.
- Spring MVC Application, created a Spring MVC application to establish a connection with the database.
- Utilized Spring web flow for managing the flow of user interactions within the application.
- Tag Libraries and Validations leveraged the capabilities of tag libraries like struts-validations and struts-beans to enhance code efficiency and maintainability.
- Developed interactive and responsive user interfaces using React and ReactJS.
- Implemented a component-based architecture for the front-end, enhancing code reusability and maintainability.
- Collaborated with the design team to create pixel-perfect UIs from mockups and wireframes.
- Hibernate Integration utilized Hibernate to develop Data Access Object (DAO) code, facilitating efficient interaction with the database.
- Implemented Hibernate for Object-Relational Mapping (ORM) to streamline data management.
- Database Interaction developed SQL and PL/SQL queries, as well as stored procedures, to manage interactions with the database.
- Testing and Quality Assurance gained extensive experience in manual and unit testing across multiple projects.
- Developed JUnit Test Cases to ensure the reliability and robustness of the codebase.
- EJB Components and Deployment, designed and deployed server-side Enterprise Java Beans (EJB) Session Beans and Entity Beans components using Eclipse IDE.
- Managed the deployment and integration of these components within the project architecture.
- Change Management and Maintenance, responsible for handling change requests and maintaining the codebase throughout the project's development lifecycle.
- Version Control and Collaboration, managed code versioning and merging using tools such as ClearCase, SVN, and CVS to facilitate collaboration and code management.

Technologies and Tools: Java, J2EE, CMS, WebLogic Application Server, JavaScript, React, AJAX, Web Services, WSDL, JUnit, Maven, JPA, Microsoft Visio, HTML/DHTML, XML, Eclipse, and Linux.
