

Akshitha Reddy
Data Analyst

PROFESSIONAL SUMMARY:

- **A data analyst with over five years of experience in financial reconciliation, claims processing, and insurance analytics, with a focus on data visualization, risk assessment, and compliance reporting.**
- **Skilled at using Power BI, SQL, and data modeling, and has created interactive dashboards that give the underwriting and claims teams' useful information they can use.**
- **Practical experience in the transformation and cleaning of insurance claim data to guarantee its accuracy and consistency across reporting systems.**
- **Extensive experience in financial reporting, fraud detection, and policyholder risk assessment models, as well as a strong foundation in regulatory compliance.**
- **Automated premium tracking reports, which enhance operational efficiency and reduce manual effort by 20%.**
- **Developed predictive models to reduce financial risks by improving the detection of fraud in claims processing.**
- **A specialist in stakeholder collaboration, with experience in the facilitation of UAT testing, business requirement gathering, and technical documentation for data analytics workflows.**
- **Developed self-service business intelligence tools that enable underwriters to analyze policy trends and customer segmentation, thereby enhancing data-driven decision-making.**
- **Developed real-time compliance dashboards to guarantee adherence to insurance industry standards, such as IFRS, SOX, and NAIC.**
- **Enhanced the accuracy of revenue forecasting by optimizing SQL queries for financial reconciliation and policy tracking.**
- **Enthusiastic about the potential of data analytics to enhance the accuracy of reporting, streamline insurance processes, and facilitate the development of business intelligence solutions.**

Technical Skills

Databases & Data Management Programming	Google Big Query, SQL (PostgreSQL, SQL Server, MySQL, Oracle Database), Snowflake SQL (T-SQL, PL/SQL), R, Python (pandas, NumPy), Data API Integration, Workflow Automation
Business Intelligence & Reporting	KPI Dashboards, Ad-hoc Reporting, Self-Service B
Data Visualization	Power BI, Tableau, Excel (Pivot Tables, Power Query)
ETL & Data Warehousing	Azure Data Factory, Apache Airflow, dbt, SQL-based ETL pipelines
Predictive Analysis & Statistical Modeling	Logistic Regression, Random Forest, Time Series Forecasting, A/B Testing
Machine Learning Algorithms	XGBoost, Gradient Boosting, K-means Clustering, Customer Segmentation & Retention Models, Predictive Modeling, Feature Engineering, Model Optimization (GridSearchCV, Hyperparameter,Tuning), Data Wrangling
Process Optimization & Workflow Automation	Power BI Performance Tuning, Report Optimization, Stakeholder Collaboration

CERTIFICATIONS: Tableau | Python | JAVA | PowerBI

Professional Experience:

BlueVine – Jersey City, NJ
Data Analyst

Feb '23 - Present

Responsibilities:

- **Developed over 30 interactive Power BI dashboards to monitor financial KPIs, loan performance, and customer behavior.**
- **Optimized SQL queries, resulting in a 40% reduction in dashboard load time and an improvement in database**

efficiency.

- **Developed predictive models** based on **Python** to improve the **accuracy of risk assessments** for **loan default prediction**.
- Ensures **seamless data integration** from multiple sources through **automated ETL workflows in Azure Data Factory**.
- Conducted **A/B testing** on **financial products** to enhance customer engagement and conversion rates.
- Developed algorithms for **fraud detection**, resulting in an **annual reduction of over \$200K** in **high-risk transactions**.
- Conducted stakeholder meetings to convert **business requirements** into **data-driven insights** and reporting solutions.
- Developed self-service **BI tools** that allow teams to generate reports on-demand, thereby **enhancing the speed of decision-making**.
- Enhanced the real-time analytics capabilities of **Power BI** by integrating **BigQuery and Snowflake**.
- **Conducted financial forecasting** to assist leadership in developing **strategies for risk mitigation** and **budgeting**.
- Ensured compliance with **SOX and IFRS regulations** by developing **row-level security models**.
- Enhanced **fraud detection and risk monitoring** by implementing **real-time anomaly detection dashboards**.
- Developed **data governance frameworks** to guarantee the **accuracy and cleanliness of data** across all systems.
- Automated regulatory reporting, which **decreases compliance effort by 35%**.
- Optimized **complex queries** for **large-scale financial datasets** on a weekly basis through **SQL performance tuning**.
- Collaborated with engineering teams to improve the **efficiency of ETL** by enhancing **data pipelines**.
- Analyzed **customer segmentation patterns** to facilitate **personalized financial product recommendations**.
- Increased the **adoption of Power BI self-service analytics** among business teams by **providing training**.
- **Developed ad hoc financial reports** to assist leadership in the **decision-making process of product development**.
- Collaborated with data engineers to enhance the **performance of queries** by optimizing **data warehouse structures**.
- Ensured the development of standardized and high-quality reporting metrics by leading data governance initiatives.
- Enhanced visibility into market fluctuations by creating **real-time financial risk dashboards**.
- **Enhanced market trend analysis** by incorporating **third-party APIs** for **external financial data**.
- Standardized workflows for data transformation, which enhances the **overall efficiency of reporting**.
- **Developed SQL-driven financial reconciliation reports** to **mitigate revenue reporting errors**.
- Developed **key performance indicator (KPI) tracking systems** to **improve visibility of business performance trends**.
- Ensured compliance with **PCI-DSS and GDPR standards** by overseeing **data security protocols**.
- Developed data validation procedures to **improve the accuracy of reporting by 30%**.
- **Led the automation of data pipelines**, resulting in a **40% reduction in manual reporting efforts**.

Environment: SQL, Python, Power BI, Snowflake, ETL, Predictive Analytics

Pattern – Lehi, UT

Sep '20 – Jul '22

Data Analyst/ Business Analyst

Responsibilities:

- Developed over **20 Power BI dashboards** to monitor **retail performance, pricing strategies, and sales trends**.
- Developed **SQL queries** to enhance **stock optimization** and facilitate **real-time inventory management**.
- Supported pricing strategies and **revenue growth** by conducting **financial data modeling**.
- Automated **ETL workflows**, which guarantee the **seamless integration of data** from numerous **retail data sources**.
- **Optimized marketing spend allocation** through **A/B testing of customer promotions**.
- Enhanced **targeted sales campaigns** by creating **customer segmentation models**.
- Enhanced the **accuracy of demand prediction** by developing **real-time sales forecasting models**.
- Developed **fraud detection dashboards** to mitigate **high-risk retail transactions**.
- **Reduced the manual reporting workload** by optimizing **SQL-based reporting automation**.
- Guaranteed that the data for reporting was clean and standardized through the implementation of **data audits**.
- **Developed interactive data models** that allow **executives** to dynamically **analyze revenue trends**.
- Maintained **data governance compliance** by ensuring that reporting is **consistent with internal policies**.
- **Improved retail analytics and performance** by collaborating with **finance and marketing teams**.
- **Improved e-commerce insights** by integrating **external retail data APIs**.
- Enhanced **profitability tracking and margin analysis** through the development of **automated pricing reports**.
- **Developed self-service analytics dashboards** to facilitate the **monitoring of performance by store managers**.

- **Standardized retail analytics frameworks**, which guarantee **uniform reporting methodologies**.
- **Conducted SQL query optimization**, resulting in a **40% reduction in load times**.
- **Developed customer retention dashboards** to analyze **long-term purchase behavior**.
- **Generated inventory performance reports** that resulted in a **15% reduction in stock waste**.
- **Conducted training sessions** on the most effective **data analytics and Power BI techniques**.
- **Oversaw the integration of data** between **POS and e-commerce systems**, thereby enhancing **data synchronization**.
- **Facilitated the rapid process of business decision-making** by providing **ad hoc sales reporting**.

Environment: SQL, Power BI, Python, BigQuery, Data Governance

Business Brio – Kolkata, INDIA

Jul '19 - Sep '20

Data Analyst

Responsibilities:

- **Assisting in the transformation and cleaning of insurance claim data** to guarantee the **highest level of accuracy** in reports.
- **Developed Power BI dashboards** to illustrate the **processing times of claims** and the **metrics used in risk assessments**.
- **Created SQL queries** to enhance **data consistency** for **financial reconciliation**.
- **Ensured regulatory compliance** by validating **policyholder risk assessment models**.
- **Automated insurance premium tracking reports**, which **reduce manual effort by 20%**.
- **Ensured that new data solutions were in alignment with business requirements** by conducting **UAT testing**.
- **Developed real-time compliance dashboards** to monitor the **adherence to insurance policies**.
- **Contributed to the development of predictive models**, which enhanced the **detection of fraud in the claims processing process**.
- **Oversaw stakeholder reporting**, which offered a **comprehensive understanding** of the **demographics of policy holders**.
- **Improved the accuracy of financial reporting** by implementing **data validation processes**.
- **Created technical documentation for data analytics workflows** to ensure **knowledge transfer**..

Environment: SQL, Power BI, Data Cleaning, Reporting.

EDUCATION:

Electronics & Communications Engineering, CMR Institute of Technology, Hyderabad – India.
