

Anoop Reddy
7323931313*107
ramki@trustek.com

Professional Summary:

- Over **3+ years** of professional experience as a **Full Stack Developer**, demonstrating a comprehensive understanding of all phases of the Software Development Lifecycle (**SDLC**), including **Analysis, Design, Development, Testing, and Maintenance** of Java UI applications for large-scale Enterprise Customers.
- Proficient in **Java** programming with a strong command of **J2EE** and **J2SE**, showcasing the ability to develop scalable applications.
- Skilled in creating Web UI Applications using **HTML, CSS, Bootstrap, JavaScript, TypeScript, Ajax, jQuery, Angular.js, React.js, Express.js, Node.js**, and **jQuery UI**, as well as **Spring MVC**.
- Experienced in **XML-related technologies** such as **XSL, XSD**, and **XML Schemas**, with knowledge of **XML parsers like DOM & SAX**.
- Proficiently worked with **Java** features, including Lambda Expressions, Functional Interfaces, Stream APIs, Time APIs, as well as leveraging Collection, Concurrency, and IO improvements introduced in Java.
- Proficient in utilizing **CSS3** preprocessors for styling, including **Sass/Less**, supported by the **Compass** framework.
- Sound comprehension of responsive frameworks, including **Bootstrap**, for creating adaptive web designs.
- Constructed pipelines for **Continuous Integration (CI)** and **Continuous Deployment (CD)** for automatic and smooth software delivery.
- To increase productivity and lower manual errors, the build, test, and deployment procedures were automated using **Jenkins and GitLab CI/CD**.
- Skilled in developing **Single Page Applications** through the **Angular JS** framework.
- Expert in analyzing and resolving **Cross-Browser compatibility** issues and provide coding solutions to **reusability** problems.
- Strong aptitude for handling data exchange in **JSON** or **XML** formats through **AJAX** calls.
- Extensive familiarity with leveraging libraries like **jQuery** to implement dynamic webpage functionalities.
- Proficient in crafting and maintaining **responsive webpages** optimized for diverse devices, encompassing desktops, mobile phones, and tablets in both portrait and landscape orientations.
- Well-versed in popular browser debugging tools/plugins like **Chrome inspector, Firebug, IE Tester**, and the **Jasmine testing framework**.
- Possessing practical expertise in provisioning Amazon Web Services (**AWS**) and a strong understanding of various AWS services such as Elastic Compute Cloud (**EC2**), Simple Storage Service (**S3**), Glacier, Auto Scaling, IAM, Dynamo DB, Virtual Private Cloud (**VPC**), Route53, Cloud Watch, AWS CLI, Cloud Formation, Cloud Front, Elastic Beanstalk, **ELB** (Elastic Load Balancers), **RDS, SNS, SWF, SES, SQS**, and **EBS** among others.

- Experienced in utilizing **AWS Dynamo DB** to capture any modifications made to the database.
- Extensively worked with **Amazon Web Services**, employing **Elastic Beanstalk, EC2, and AMI** with **Linux**.
- Demonstrating a comprehensive understanding of **Microservice** architecture and possessing hands-on experience in implementing various design patterns.
- Developed REST web services based on **RESTful APIs** and designed and deployed **Microservice** business components in Java/J2EE and **Spring Boot**.
- Proficient in designing and developing enterprise-level web applications using **Spring REST, Hibernate, EJB, Struts, Servlets, and JSP** for **User Interface Applications**.
- Extensive expertise developing **Spring framework** applications such as **Spring Core, Spring AOP, Spring IOC, Spring MVC, Spring Batch, Spring JPA, Spring Security, and Spring Boot**, as well as effectively integrating **Microservices** into existing system architectures.
- Experienced in **Spring AOP, Security, Event Handling, Spring MVC, and Spring IOC Container**.
- Created Data Access Objects (DAOs) with **Hibernate** as the ORM tool, allowing interaction with multiple DBMS such as **MySQL, PostgreSQL, SQL/PL-SQL Oracle10g, and NoSQL** databases such as **MongoDB**.
- Broad expertise in architecting, deploying, and overseeing applications on the **Microsoft Azure cloud platform**.
- Developed custom Java applications and libraries to interact with **Databricks APIs** and integrate with other services.
- Skilled in effectively utilizing Azure Resource Manager (**ARM**) to streamline resource provisioning, ensure robust security measures, and monitor system performance.
- Integrated Databricks with **Azure Data Lake Storage** for efficient data storage, retrieval, and analysis.
- Proficient at designing **Restful APIs** for web services using the **Jersey** Framework and constructing **SOAP-based** services using **Spring-WS**.
- Knowledge of web services (**SOAP/RESTful**) and optimizing application scalability for better **BOA**.
- Well-versed in creating and consuming services in a Service-Oriented Architecture (**SOA**) environment.
- Enhanced overall performance through the implementation of **multithreading collections, synchronization techniques**, and effective **exception handling** strategies.
- Utilized **Apache** for seamless integration and data processing with **Spring**, including multi-threaded message consumption, and employed **Zookeeper** for service maintenance.
- Proficient in working with **Docker** images, container push/pull operations with **Spring Boot**, leveraging **Jenkins** for Continuous Integration and Continuous Deployment (CICD), as well as utilizing AI (Artificial Intelligence) solutions.
- Utilized **Jenkins** for Continuous Integration and employed Sonar jobs to ensure Java code quality.
- Proficient in message streaming using Apache **Kafka**.
- Skilled in working with message brokers such as **Active MQ** and **RabbitMQ**.
- Strong familiarity with tools such as **Selenium, Jenkins, Junit, and Curl** for **unit and system testing**.
- Experienced in using **JIRA** for bug tracking.

- Proficient in utilizing various **CICD** tools, including **ANT, Maven, Gradle, Jenkins, CVS, Git,** and **GitHub**.
- Experience with web/application servers such as **WebSphere, WebLogic, Jetty, JBoss,** and **Tomcat Server**.
- Proficient in performing **unit testing, integration testing,** and generating test cases using **JUnit**.
- Experienced in working with version control tools like **SVN, CVS,** and **Git**.
- Well-versed in using popular IDEs such as **Eclipse, VS Code, Sublime Text, IntelliJ,** and **NetBeans**.
- Managed projects using **Agile, Scrum** and **Waterfall** practices throughout the years.

Technical Skills:

Languages	Java7/8/11, C#, J2EE, J2SE, Scala, xml
Web Technologies	SERVLETS, JSP, JavaBeans, Java Servlet API
J2EE Technologies	JSP, Servlet, Spring 2.X/3.x, Struts/Struts 2, Hibernate 3.x, Expression Language, JPA, JDBC, Java Mail, EJB, JMS, AMQP, Apache Camel, Oauth1/2.
Application/Web servers	Apache Tomcat, IBM WebSphere, Jetty, Jenkins, WebSphere MQ
Databases	Oracle, SQL server, MySQL, PostgreSQL, MongoDB, Cassandra DB, DB2
Technologies	HTML, JavaScript, CSS, jQuery, Angular JS, Bootstrap, NodeJS.
Cloud Environments	AWS, Azure, Kubernetes.
IDE	Eclipse, VS Code, NetBeans, IntelliJ, Spring Tool Suite (STS).
Message Queues	JMS, Active MQ, Rabbit MQ, Kafka.
Operating system	Window, Linux Mint, Unix.
Defect tracking Tools	Junit, JIRA, Jasmine
Reporting Tools	Jasper Reports, Crystal Reports XI, SSRS.
Methodologies	Agile, waterfall, TDD (Test-Driven-Development).
Scrum Developer IDE Platforms	Eclipse, Edit plus, Notepad ++, TEXT PAD, Net Beans, IntelliJ, Spring Tool Suite (STS), GITHUB.
Build Tools	Ant, Maven, Gradle.
Web Services	SOAP, REST.

Professional Experience:

Client:-Engine Impact, Spokane, WA
Full Stack Developer – Java

May 2023 - Present

Responsibilities:

- Collaborated in a highly dynamic **AGILE** environment, actively participating in scrum and sprint meetings.
- Developed a new frontend from scratch, **employing HTML, CSS, JavaScript, jQuery, Bootstrap, AngularJS, & NodeJS** as the frontend building environment.
- Configured and executed gulp tasks within the **NodeJS** runtime, handling injection, **CSS** pre-processing, minifying, test-running, and building synchronization.
- Created custom directives, factories, and services in **AngularJS**, ensuring adherence to coding standards. Implemented **AngularJS** controllers to isolate scopes and perform operations. Additionally, extensively utilized Core Java features, such as Exceptions and Collections.
- Proficient in consuming Restful web services using **NodeJS, AngularJS, & jQuery** and implemented **AJAX** calls and parsed **JSON** responses to render data on the user interface.
- Leveraged **Java** features, including lambda expressions, parallel operations on collections, multithreading, and efficient sorting mechanisms.
- Utilized Streams and Lambda expressions available in **Java** to store and process data.
- Designed and developed a framework for consuming web services hosted on **Amazon EC2** instances.
- Developed migration for customers using **Java, Spring Boot and Restful Web Services**.
- Developed batch jobs using **Spring Batch, Cassandra** for asynchronous processing and more reliability.
- Integrated automated testing into the **CI/CD pipeline** to ensure software quality at each stage of development.
- Configured and managed build tools like **Maven and Gradle** within the CI/CD pipeline to streamline the build process and manage dependencies.
- Experienced in implementing event-driven and scheduled **AWS Lambda** functions to trigger various AWS resources.
- Utilized **AWS SDK** to connect to **Amazon S3** buckets, which served as the object storage service for storing and retrieving media files related to the application. Monitored application performance and stored logging information using **Amazon CloudWatch**.
- Used **PostgreSQL** for data storage and **CRUD** operations.
- Employed **MySQL** as the database for the application, hosted in the cloud using **Amazon RDS** service.
- Created metrics dashboard using **Grafana** and trace application logs using **Kibana**.
- Actively participated in troubleshooting issues within **AWS** and Cloud environments.
- Proficient in implementing **Microservices** and **SOA** with **XML**-based web services (**SOAP/UDDI/WSDL**) using both Top-Down and Bottom-Up approaches.
- Collaborated with the **SPRING** framework to integrate Hibernate and optimize the Classical Model-View-Controller (**MVC**) architecture.

- Implemented **SPRING MVC** application framework, configuring Java beans using **SPRING IOC**, and utilizing **SPRING Hibernate** support and transaction management.
- Experience in creating **RESTful** web services using **Jersey**, **Spring framework**, and **JAX-RS**.
- Developed **RESTful** web services to retrieve data from the client-side, making **REST API** calls from **AngularJS**, and parsing the data for client projection. Implemented security and authorization using **Spring Security** and **OAuth1/2**.
- Developed a Web Services Client using **REST** and **RSDL** to verify the new customer history for a connection.
- Implemented **DAOs** (Data Access Objects) using **Hibernate** as the **ORM** tool to interact with **DBMS**, including **MySQL** and **Mongo DB**.
- Enhanced the full-text search functionality by optimizing the connection to **Mongo DB**.
- Utilized **Docker** to deploy **Microservices** within modern containers, ensuring improved isolation.
- Implemented thread handling to ensure the continuity of execution and extensively utilized the concept of **Multithreading** for effective Transaction Management with isolation and propagation levels.
- Contributed to the design of **Kafka** messaging queues.
- Employed **MAVEN** as a Build Process, generating documentation, reporting, and managing dependencies.
- Performed daily Night Builds and Weekly Builds & Releases for the product using **Ant** and **Maven** build scripts.
- Developed Unit test cases and test suite using **JUnit** in Eclipse. Additionally, implemented **Curl** for testing purposes.
- Utilized **Jenkins** as the integration tool, thereby enhancing the **scalability** of applications on **cross-platforms**.
- Deployed Application **EAR** and **RESTful** Services on the **JBoss** Application Server.
- Actively involved in Production Support and Maintenance of the application, troubleshooting issues on **JBoss**, and analyzing **logs**, **payments**, etc. to resolve problems.

Environment:

Java/JDK, J2SE/J2EE, HTML, CSS, JavaScript, JQuery, Spring, Spring Boot, Spring Batch, Spring MVC, AngularJS, NodeJS, Ec2, S3, PostgreSQL, JDBC, AWS, Tomcat, Kibana, Grafana, Cassandra, Hibernate, REST, JSON, RESTful, Eclipse, MAVEN, Gradle, JUnit, Jenkins, JBoss, Linux OS, MongoDB, GIT, PL/SQL, Docker, ANT, JIRA, Kafka, JMS.

Client:-Hudl, India

Jun 2020 – Aug 2022

Full Stack Developer - Java

Responsibilities:

- Developed a **Micro Service-based application** using **React JS** for the frontend and **Spring Boot services**.
- Implemented views using **HTML**, **CSS/LESS**, **Bootstrap 4.0**, and **AJAX**.
- Created a single **ISOMORPHIC responsive website** using **React.js** that could adapt to various

devices such as desktop, tablets, and mobile, ensuring a consistent user experience.

- Utilized **React JS** to build responsive UI components with Bootstrap and dynamically rendered virtual **DOM** based on **API** data.
- Developed front-end screens using **React.js**, leveraging predefined components from **NPM** (Node Package Manager) and the **redux library**.
- Employed React **Router** to create a **SPA** (Single Page Application) that binds data to specific views and synchronizes data with the server.
- Implemented the **flux pattern** using the **redux framework** as a core dependency.
- Proficient in **React.js**, utilizing concepts such as **one-way data flow**, **Virtual DOM**, **JSX**, and **React Native** to create interactive UIs.
- Incorporated **Angular11** built-in HTTP service into custom services to communicate with the backend through RESTful APIs. Utilized **Pipes** to format and sort data displayed in templates.
- Utilized **Angular CLI** to generate components, services, filters, and compiled the application in different environments.
- Employed **Axios AJAX requests** to retrieve data from the server simultaneously.
- Performed unit testing on applications using tools like **Mocha** and **Chai** to test **React JS** components.
- Infrastructure as code was implemented in the **CD pipeline** using technologies such as **Terraform**, enabling for **uniform and reproducible infrastructure installations**.
- During the **CD process**, monitoring and logging tools such as **Prometheus** and the **ELK** stack were used to track and analyze application performance and logs.
- Leveraged **Java** features, such as parallel streams and filters through **lambda expressions**, to handle searching operations.
- Developed **Restful** web services using **JAX-RS** in **JERSEY** to expose data to the Spring module.
- Developed and deployed applications based on **Microservices** architecture using **Spring Boot** and **Spring Cloud**.
- Proficient in utilizing the **Spring Security module**, incorporating features such as **Site Minder**, **OAuth 2.0 Configuration**, and **OpenID Connect** for enterprise application authentication and authorization.
- Utilized **Spring IOC** for specifying object dependencies through dependency injection.
- Implemented **ORM frameworks**, specifically **Spring Data**, to simplify data access.
- Implemented transaction management in the application using the **Spring AOP** framework.
- Employed **Spring AOP** to achieve modularity and handle cross-cutting concerns like **transaction management**, logging, and profiling.
- Utilized **Hibernate** as the Object-Relational Mapping (**ORM**) tool for accessing persistent data.
- Collaborated with **Spring Batch** to convert XML files into database records.
- Configured **JBOSS** Application Server and utilized an **Oracle** database.
- Developed the Mean Stack from scratch, including setting up the **Mongo DB server** (**Mongoose Connector**) and **developing the Express JS server**.
- Utilized **Apache Kafka**, a highly durable messaging system, for asynchronous exchange of vital information between multiple business applications.
- Designed, created, and maintained **ETL (Extract, Transform, Load)** pipelines for processing huge datasets effectively with **Apache Spark** and **Databricks**.

- Utilized the security, auditing, and tagging features of **Azure Resource Manager (ARM)** to manage resources once they were deployed.
- Employed **Azure Resource Manager (ARM)** for synchronized actions during the deployment, update, or removal of project resources.
- Leveraged **Azure Functions** to seamlessly integrate and execute backend operations based on predetermined schedules, eliminating the need for server setup or management.
- Deployed and monitored **Microservices** using **Pivotal Cloud Foundry**, managing domains and routes within the **Cloud Foundry** environment.
- Published message services using **Spring AMQP's Rabbit Template** and subscribed to messages on a POJO using Message Listener Adapter.
- Utilized **Jenkins** for Continuous Integration and Continuous Deployment (CI/CD).
- Configured **Webpack** to execute linters, minifiers, pre/post-processors, tests, transpiling, etc., based on build targets.
- Created, managed, and deployed container-based applications using **Docker images** containing both middleware and applications.
- Deployed **drools** rules as a service in a **J2EE** stack environment.

Environment:

JavaScript, React JS-Redux, HTML, CSS, AJAX, Bootstrap, jQuery, Spring Security, Rabbit MQ, Spring Data, Spring Batch, Azure, Hibernate, Microservices, Restful services, Eclipse Java EE IDE, Jenkins, Splunk, Node Package Manager(NPM), Oracle DB, MySQL, Spring AOP, Spring Transaction Management, Docker, Ribbon, JUnit, Mockito, Mocha, Chai, Cassandra DB, Cassandra Node Connector, Gradle, JBoss, WADL, Web pack, Drools, IBM MQ, Kafka.

Education:

- **Master's in computer science at Portland State University, United States.**
- **Bachelor's in computer science at Dayananda Sagar University, INDIA.**
