SUMMARY

- Software Engineer with 4+ years of experience building and modernizing business-critical Java applications using Spring Boot and React. Strong in designing modular, domain-aligned backend systems, RESTful APIs, and transactional workflows that model real-world business processes. Experienced in greenfield development, system re-architecture, and performance optimization, with a strong focus on code quality, maintainability, and collaboration. Passionate about automation and pragmatic engineering that delivers measurable business value.

TECHNICAL SKILLS

Programming Languages: Python, Java (17), SQL, JavaScript, TypeScript
Cloud Platforms: AWS (Lambda, S3, EC2, DynamoDB, IAM), Azure, Google Cloud Platform
Frameworks & APIs: Spring Boot, Spring WebFlux, Spring Security, REST, GraphQL, OAuth2, RBAC, J2EE
UI & Frontend: React.js, Redux, HTML5, CSS3
Architecture: Modular Monoliths (Modulith), Microservices, Domain-Driven Design
Automation & DevOps: Terraform, Jenkins, Docker, Kubernetes, Helm, Gradle, Maven, Git, GitHub
Big Data & Pipelines: Apache Spark, Kafka, Dataflow, Airflow/Cloud Composer
Databases: PostgreSQL, Cloud SQL, MongoDB, MySQL, Cassandra, Redis, SQL Server
Testing: JUnit, Mockito, Integration Testing
Methodologies: Agile (Scrum), CI/CD, Asynchronous Programming, Object-Oriented Design, Data Structures, Algorithms

WORK EXPERIENCE

Depository Trust & Clearing Corporation (DTCC) | Software Developer-USA

Apr 2024 – Present

- Designed and implemented modular backend services using Java 17 and Spring Boot to support business-critical financial workflows, improving API response times by 30%.
- Applied object-oriented design and algorithmic problem solving to build scalable and modular APIs, reducing code duplication and improving maintainability.
- Owned end-to-end design and delivery of backend modules, collaborating with product and domain stakeholders to translate complex business rules into clean, maintainable code.
- Designed internal APIs and service boundaries with clear domain separation, enabling long-term maintainability and future system evolution.
- Automated infrastructure provisioning with Terraform and GitOps in AWS, cutting environment setup time by 50% and improving infrastructure compliance.
- Built scalable, event-driven backend components using Kafka to process high-volume transactional data with strong reliability, auditability, and performance requirements.
- Migrated legacy monoliths to microservices deployed on AWS (ECS + Fargate), integrating with Amazon Redshift, RDS (PostgreSQL), and DynamoDB to support DTCC's transformation toward a scalable, resilient, and cost-efficient architecture. This enabled real-time processing of trade and regulatory data and enhanced auditability and uptime.
- Integrated React.js frontends with backend APIs to deliver responsive UIs, boosting user experience by 20%.
- Hardened application security using Spring Security, OAuth2, JWT, and fine-grained RBAC controls, ensuring industry-standard compliance across financial systems.
- Enabled long-term scalability of core business systems by modernizing legacy backend components into modular, domain-aligned APIs.
- Took end-to-end ownership of backend modules from design through development, testing, and deployment.
- Contributed to greenfield development initiatives focused on modernizing legacy systems into modular backend services.
- Championed code quality & maintainability through clean coding practices, design patterns, and automated testing.

Olam Information Services | Full Stack Developer | India

Aug 2020 – Dec 2022

- Developed modular REST APIs with Spring Boot and integrated them with React UIs, improving transaction processing efficiency by 35%.
- Collaborated closely with product and QA teams to understand business workflows and implement reliable, testable backend solutions.
- Implemented FHIR-compliant Bundle Resource Type APIs to support bulk CRUD operations within an AWS HealthLake-like data store, enhancing patient data ingestion and multi-resource querying in a single API call.
- Redesigned the service's canary testing system to run on a distributed compute engine using AWS Lambda and Step Functions, improving test reliability and reducing infrastructure costs by 12%.
- Optimized healthcare data querying by integrating compaction techniques into AWS Athena and Redshift queries, improving performance by 10–50% when analyzing patient records.
- Streamlined search performance across S3-based data lakes by parallelizing reads with Amazon EMR and AWS Glue, reducing search latency by approximately 18% for critical healthcare workflows.
- Developed an automated cleanup system for orphaned OpenSearch domains in AWS (e.g., self-managed on EC2 or Amazon OpenSearch Service), saving ~\$3.06M/month in infrastructure costs and eliminating redundant Sev2 alerts.
- Identified opportunities to automate manual operational workflows using rule-based and data-driven approaches, reducing manual effort and improving processing accuracy.

Delloitte | Java Developer | India

Apr 2020 – Aug 2020

- Refactored chatbot UIs using React.js and Spring Boot, increasing responsiveness and user satisfaction.

- Optimized PL/SQL queries in Oracle, boosting database performance by 8%.
- Revamped code quality via SonarQube compliance and achieved 80%+ test coverage using JUnit.
- Containerized services with Docker and deployed via Amazon ECS, reducing deployment cycles by 30%.
- Implemented unit and integration tests using JUnit and Mockito to ensure system reliability and maintainability.

EDUCATION

University of Cincinnati – Master’s in Information Technology, CGPA: 4/4

Jan 2023 – May 2024

ACHIEVEMENTS AND CONTRIBUTION

- **AWS Certified Developer - Associate**
- **Microsoft Technology Associate (MTA) Certificate** – Completed Introduction to Programming with Python, demonstrating foundational skills in coding and logic building.
- **Top Performer** – Summer Internship Program – Recognized for outstanding performance during a hands-on summer internship project.
- **Finalist in Smart Bridge (IBM) National Hackathon** for developing innovative tech solutions under time constraints.
