Professional Summary

- Dedicated and result-oriented software engineer with 5 **year** of experience in **Appian BPM at Machint Solutions**.
- Experienced with deep understanding of software development life cycle (SDLC) process i.e. performing detailed analysis, collecting requirements, documenting requirements, design, integration across development, testing, production environments
- Experience in **JIRA** for Project tracking
- Ability to work in an independent and team-oriented environment with well-developed organizational & exceptional communication skills
- Good analytical, problem solving and communication skills
- Ability to mentoring and maintain team coordination
- Worked with Business to understand their requirement and design and develop them into to process flows and models within Appian
- Analyst during requirement gathering and brainstorming sessions
- Passionate to learn new technologies and quick learner with excellent analytical and logical skills.
- Deep understanding of Appian's architecture and best practices.
- Expert in designing, developing, and deploying efficient Appian applications.
- Committed to rigorous testing, troubleshooting, and quality assurance.
- Currently working while holding **H1B Visa** status.

CERTIFICATIONS

- Appian Level 1 Certified
- Appian Level 2 Certified
- Appian Level 3 Certified

Technical Skills

- Operating System : Windows OS
- BPM Tools : Appian, Basics of RPA
- Database : Oracle, MySQL
- Languages : C, Python, MySQL

Project Summary

Project#6

Project Title	: Investigative Case Management (ICMS)
Client	: NSF OIG
Environment	: Appian BPM 23.X – 24.X, MySQL
Role	: Lead Appian Developer (Scope IT Consulting, Contract),
Location	: On-Site @North Carolina (H1B Visa)
Period	: November 2023 – Current

Description:

The Investigative Case Management System (ICMS) for the National Science Foundation's Office of Inspector General (NSF OIG) is designed to handle complaints efficiently. This comprehensive system allows users to submit complaints through various channels, including web portals and phone calls via agents. The NSF OIG Complaint Module streamlines the process of receiving, tracking, and resolving complaints related to NSF activities. The primary goals of this project were to enhance efficiency, ensure compliance, and improve the overall user experience for both complainants and OIG staff.

Responsibility

- Actively interacted with the product owner to obtain the requirements and design documentations, which were used to creating JIRA Stories.
- Involved in the designing and implementation of enhancement features of ICMS.
- Designing the data structure and creating tables and views in MySQL according to the requirements
- Implemented inline document editing functionality using the Collabra online editor.
- Develop rich user interfaces using Appian SAIL Rules, Appian SAIL Components, Query and Expression Rules.
- Develop BPM Workflows using Appian Process Modeler, Gateways, Events and Smart Services.
- Conducted unit and integration testing to ensure functionality and reliability.
- Created user manuals and conducted training sessions for end-users.

Project#5

Project Title	: OLVR (Online Voter Registration)
Client	: TGS Technology LLC
Environment	: Appian BPM 22.X, MySQL
Role	: Senior Appian Developer
Location	: On-Site @North Carolina (H1B Visa)
Period	: April 2023 – November 2023

Description:

The online voter registration system allows the citizens of a State to register themselves to Vote using a web and mobile application. It provides the option to request a New Registration or change the details or particulars of the existing registration in the voter record. The system will perform the system-level check for the individual based on the DMV record, and based on the provided information, the record will be sent to the State Election Board to validate and take necessary action on such a request. It saves time and the process of going through the paperwork for both the general public and the State Election Board Officials.

Responsibility

- Worked with other business technology teams to understand requirements and patterns and ensure consistency in design across applications built on the Appian platform Development of the process model, rules, reports, Interfaces, Records, Portals and Web API's.
- Helps define and drive application standards and best practices across the Appian/BPM platform.
- Designed database model and major work flows of the process. Designing the data structure and creating tables and views in MySQL according to the requirements
- Build and deploy of applications Help Review application design and code review
- Refactoring the code to improve performance

Unit testing and bug fixing Performed various black box testing methodologies like functional testing, re-testing and regression testing.

Project#4

Project Title	: AL Khairi Care
Client Name	: AL Khairi Care (Malaysia)
Environment	: Appian BPM 22.X, MySQL
Role	: Senior Appian Developer
Location	: Offshore
Period	: August 2022 – April 2023

Description:

AL Khairi Care is an insurance platform that offers insurance for those travelling for Singapore and foreign worker insurance policies. It is a headless appian application that is integrated with React, Android, and iOS applications.

Responsibility

- Works with other business technology teams to understand requirements and patterns and ensure consistency in design across applications built on the Appian platform
- Helps define and drive application standards and best practices across the Appian/BPM platform
- Development of the process model, rules, reports, Interfaces, Records and Web API's.
- Designed database model and major work flows of the process. Designing the data structure and creating tables and views in MySQL according to the requirements
- Refactoring the code to improve performance

Project#3

Project Name : Taheel
Client Name : Takamol (Saudi Arabia)
Environment : Appian BPM 21.x, Oracle
Role : Senior Appian Developer
Location : Offshore
Period : January 2022 – August 2022

Description:

This service allows the beneficiaries with disabilities to apply for disability assessment through the platform to register/update the information of their disabilities by the attachment of medical reports so that the beneficiary's psychological, mental, motor, physical, sensory and clinical condition is studied. In addition, the service allows the beneficiaries also to request a visit, whether to the Ministry or a home visit in case it is not possible to assess the beneficiary's condition using the medical report information. After that, the beneficiary undergoes a functional assessment with the social worker so that to be able, after the application is approved, to apply and make use of the remaining services of the portal

Responsibility

- Served as primary interface between development team and clients throughout all phases of analysis and development
- Implemented various roles Data entry clerk Psychologist Physiotherapist Physician Social worker
- Development of the process model, rules, reports and Interfaces, Records.
- Managed end-to-end application support for all Appian applications deployed.
- Designed database model and major work flows of the process. Designing the data structure and creating tables and views in MySQL according to the requirements
- Refactoring the code to improve performance
- Provided technical assistance for troubleshooting and resolution of workflow system problems
- Unit testing and bug fixing Performed various black box testing methodologies like functional testing, re-testing and regression testing.

Project#2

Project Title : vGro(MyHero)
Client Name : In-house
Environment : Appian BPM 20.X, MySQL
Role : Junior Appian Developer
Location : Offshore
Period : June 2021 – January 2022

Description:

vGro is a smart adaptive sales automation solution that helps agents on the ground to optimize their time, improve lead throughputs and boost their earnings by cross/up selling. It is adaptable for global business across Banking, Insurance, Financial Services, Telecom, Pharmacy, Travel and Hospitality Sectors

Responsibility
