SUMMARY

Skilled software engineer with proficiency in full-stack development. Professional experience at Fannie Mae. Specialized in Java, JavaScript, and TypeScript. Developed features such as Live-ARM Pricing and APIs for loan pricing, while also supporting microservices and ensuring system reliability. Proficient in full-stack engineering. Worked with various technologies, including Spring Boot, GraphQL, AngularJS, and ReactJS, and has experience with cloud services such as AWS.

WORK EXPERIENCE

Fannie Mae, Software Engineer | Washington DC

Jan 2022- March 2025

Specialized in delivering Live-ARM Pricing Feature for Pricing Utility Engine using Java and JavaScript. Delivered an API that prices loans based on changes submitted by lenders during the post-purchase phase using Java, Spring Boot, TypeScript, AWS lambdas/S3, and RESTful web services.

- PPA processes allowed the Capital Markets team to self-manage pricing rules with 200+ attributes without requiring a software release.
- Spearheaded End-to-end testing cycles in preparation for Attribute-Based Pricing (ABP) release. Saved 1500 hours annually with improved cycle time.
- Researched and constructed an application using GraphQL to showcase uses in committing space.
- Administered multiple SRE (Software Reliability Engineering) on-call rotations to within Fannie Mae using Splunk, Java, Spring Boot, and AngularJS.
- Followed AWS Well-Architected Framework principles in addition to full-stack development.

EDUCATION

Bachelor's of Science | Computer/Data Science | University of Maryland, College Park

PROJECTS

- Schmidt Center Dashboard: An application that displays the air quality within Prince George's County, MD using ReactJS.
- Global Public Opinion: An application that found the global public opinion of any query via sentiment analysis, Python Machine Learning, and JavaScript.
- Built a stock recommendation system based on data from yfinance using data analytics, Jupyter Notebooks, pandas DataFrames, and scikit-learn (ML models).
