

Asrith Sai Varma Pericherla

Dallas, Texas | 📞: +1 945-249-2137 | ✉️: asrith.pericherla@outlook.com

SUMMARY:

- Around 3+ years of experience working as a JAVA developer in requirement analysis, design, development, deployment, and maintenance of client/server applications and Enterprise and Distributed applications.
- Extensive development experience specializing in environment building n-tier applications using JAVA, J2EE, MVC Framework, Spring Boot, Spring, Hibernate, JavaScript, HTML/HTML5, CSS/CSS3, Oracle, SQL.
- Hands-on experience developing Micro-services using Spring Boot to build more physically separated modular applications, which will improve the scalability, Availability, and Agility of applications.
- Good understanding of OOPS concepts, Collections, Exceptions Handling, Input/output (I/O) Systems, Annotations, Concurrency, Multi-Threading, Lambda, and Generics.
- Expertise in XML, SAX, DOM, SOAP web services, WSDL and Restful web services.
- Good knowledge of Amazon Web Services (AWS) and Amazon Cloud Services like Elastic Compute Cloud (EC2), Simple Storage Service(S3), Amazon Simple DB, Amazon Cloud Watch, and SNS, and experience in building highly scalable Java applications using various architectures.
- Involved in developing testing frameworks such as JUnit, Mockito, Cucumber, and Selenium for Test Driven Development (TDD).
- Experienced in Agile methodologies like Scrum and Extreme Programming (XP) and Agile practices like Continuous Integration and Test-Driven Development (TDD).
- Worked on Code Optimization & Performance Tuning of various applications.
- Hands-on experience using Eclipse, SLF4j, Log4j, JUnit, and Mockito for building, logging, and testing JTest for Performance Testing.
- Extensively utilized Spring MVC Framework, JSP, and JSF to create user interface modules.
- Proficient in utilizing social databases such as Oracle, MySQL, and SQL Server and composing complex SQL and PL/SQL programs. Excellent comprehension of NoSQL databases like MongoDB.
- Good knowledge of Single Page Applications (SPA) using JavaScript frameworks like Angular JS and React.js.
- Good experience working with Continuous Integration and Deployment (CI/CD) tools like Jenkins and Docker.
- Experience with container-based deployments using Docker, working with Docker images and Docker Hub.
- Used Kubernetes to orchestrate Docker container deployment, scaling, and management.
- Expert in version control tools like Git and SVN.
- Good team player who can work in Agile (Scrum) and Waterfall environments.

TECHNICAL SKILLS:

Language:	Java 7/ 8/10, C, C++, SQL, PL/SQL
Application Servers:	Web logic 10.3.4/9.0/7.1/6.1, IBM Web Sphere 8.x/6.x/5.x
Technologies:	Servlets, JDBC, Vert.x, JSP, Struts, Hibernate, Spring BOOT, IOC, AOP, MVC, JSON, JMS, MQ, JBOSS, ORM
Web Servers:	Rest, SOAP, Apache-Tomcat
Web Technologies:	HTML, JavaScript, AJAX, JQUERY, Angular JS, CSS3, HTML5, XHTML, DHTML, React JS, Bootstrap
XML Technologies:	XML, DOM
Database:	Oracle 10g/11g, PL/SQL, MySQL, SQL Server 2008
Build Tool:	Ant, Maven, Gradle, Jenkins
Testing:	JUnit, QUnit, JMock
IDE Tools:	Eclipse3x, IntelliJ, Atom, WebSphere, Dreamweaver
Version Control:	GIT, SVN, CVS, Docker
Operating Systems:	Windows, Mac OSX, Linux, Unix

PROFESSIONAL EXPERIENCE:

Adient, US (Pennsylvania)

Aug 2022 - Present

Jr Full Stack Java Developer

Responsibilities:

- All the functionality is implemented using Spring IO/Spring Boot and Hibernate ORM. Created the build, deployment, and configuration-related scripts for Maven
- Utilized Hibernate and SQL for communication with the SQL Server database.
- Built Spring Boot microservices to deliver software products across the enterprise.
- Decompose existing monolithic applications into multiple microservices using Spring boot and Kafka.
- Used Microservices to communicate using synchronous protocols HTTP and REST for implementing the SOA approach
- Implementation of Spring Restful web services, which produces JSON
- Migrating existing applications into microservices architecture using Rest APIs, spring boot
- Created POC of Authentication and Authorization with Oauth2 Spring Boot microservice. Utilized JWT as a tokenization scheme for Oauth2.
- Designed Java API to connect the Amazon S3 service to store and retrieve the media files.
- Extensively worked on front-end, business, and persistence tiers using the Spring framework
- Involved in designing and implementing an MVC design pattern using spring framework for Web-tier
- Developed custom components for CDC with J2EE, Spring, Hibernate and Java8. Designed components to extract and load data from the EPA website utilizing Spring and Hibernate
- Used Jenkins pipelines to drive all microservices builds to the Docker registry, then deployed to Kubernetes, created Pods, and managed using Kubernetes.
- Followed agile software development practice paired programming, test-driven development, and scrum status meetings
- Worked extensively on Spring boot for building web services
- New library development with a microservices architecture using REST APIs, Spring Boot
- Worked on creating various types of indexes on different collections to get good performance in Mongo database
- Know the partition of Kafka messages and setting up the replication factors in Kafka Cluster.
- Involved in unit testing of core functionalities using Junit.
- Performed code review and unit-tested the application using the Junit framework. Participated in the project's production support and maintenance.
- Developed API for using AWS Lambda to manage the servers and run the code in AWS
- Selecting the appropriate AWS service based on computing, data, or security requirements
- Experience in Integration of Amazon Web Services AWS with other applications infrastructure
- Performed J2EE testing in developing test cases with JUnit and MOCKITO for Unit testing and logging using Log4j and worked on Mock Testing.
- Used log4j to print the logging, debugging, warning, and info statements.
- Performed check-in, check-out, and review using pull requests with the GIT version control system.

Environment: Java8, Spring 3.5, Spring MVC, Spring Security, AWS (EC2, S3, IAM), Hibernate 4.0, Rest, JSP, HTML, CSS, JavaScript, OpenShift, Cassandra, Kafka, Typescript, Angular, RabbitMQ, Datadog, Junit, Mockito

Cognizant Technology Solutions, India (Hyderabad, Telangana)

Feb 2021 – May 2022

Java/ J2EE Developer

Responsibilities:

- Involved in developing Webservice operations in Service Oriented Architecture (SOA).
- Analyze requirements with the team; write High-Level design documents and system Use Cases, and analyze risk factors.
- Followed agile methodology during the complete SDLC process.
- Validated forms using Angular and regular expressions, thereby providing client-side validation and server validation

- Participated in Agile/Scrum development and deployment teams
- Used Spring Framework 4.1 for the application development.
- Responsible for Web UI development in JavaScript using jQuery, AngularJS, and AJAX.
- Involved in front-end development using Struts, JSP, and JSTL.
- Used JAXB for marshaling and unmarshalling work orders, billing XML documents, and JAXP for processing.
- Worked with React JS to build bootstrap components for UI web objects. Linked with API data to view and render virtual DOM dynamically.
- Created instances in AWS, as well as worked on migration to AWS from the data center.
- Developed REST Web services to make web service calls simple and easy for the client to access with the help of standard HTTP URIs.
- Developed DAOs using JPA, Algorithm, and hibernate persistence API for the database operations to interact with Oracle Database.
- Performed system monitoring using Sense and Cloud Watch in AWS Cloud.
- Implemented Microservices architecture using Spring Boot to make applications smaller and more independent.
- Developed web service client using Spring Framework and REST HTTP protocol to get customer credentials and information.
- Used Spring Core Annotations for Dependency Injection Spring DI and Spring MVC for REST APIs application with Spring Boot and Microservices.
- Used Spring Batch to set up batch jobs to email the daily reports that run on Pivotal Cloud Foundry (PCF) with Spring Boot as its MVC layer.
- Developed security framework with support for database security and integration with external security data stores such as LDAP
- Designed and developed the REST-based Microservices using the Spring Boot.
- Responsible for creating efficient design and developing User Interaction screens using HTML5, CSS3, JavaScript, jQuery, AJAX, and JSON.
- Creating custom, general-use modules and components that extend the elements and modules of core AngularJS.
- Used AngularJS as the development framework to build a single-page application and reusable AngularJS applications.
- Integrated with third-party Sale point API to make Restful Web service calls.
- Designed and developed necessary PL/SQL for the database operations as needed.
- Involved in the deployment of the application in various environments (Development, QA Testing, Staging, and Production.)
- Involved in deploying systems on Amazon Web Services (AWS) Infrastructure services EC2, S3, RDS, SQS, Cloud Formation
- Deployed application on Apache Tomcat server.
- Used GIT for version control and repository.
- Used log4j for logging errors, info, Data structures and Algorithms, and exceptions.
- Involved extensively in Code Reviews, Unit testing, and Process Improvements.

Environment: Java8, Spring 3.5, Spring MVC, Spring Security, AWS (EC2, S3, IAM), Hibernate 4.0, Rest, JSP, HTML, CSS, JavaScript, OpenShift, Cassandra, Kafka, Typescript, Angular, RabbitMQ, Datadog, JUnit, Mockito, Ajax, JSON, Rest HTTP.
