

# Baji Sharif Patan Data Analyst

patanbajisharif@gmail.com | +1 (442) 200-4594 | Dallas, USA | LinkedIn

---

## Summary

Accomplished Data Analyst with 3+ years of experience in leveraging advanced analytics, machine learning, and data engineering techniques to deliver actionable insights. Proficient in Python, SQL, Excel, and data visualization tools such as Tableau and Power BI. Expertise in building scalable data pipelines, automating ETL processes, and deploying predictive models. Adept at crafting intuitive, user-centric dashboards and visualizations that drive strategic decision-making across diverse business functions. Strong background in statistical analysis, data modeling, and cloud-based analytics solutions like AWS and Azure. Skilled in translating complex data into meaningful insights and driving data-driven decision-making.

---

## Technical Skills

- **Programming Languages:** Python, SQL, R, DAX, MATLAB, Scala, Shell/Bash, VBA
- **Frameworks & Tools:** NumPy, Pandas, Matplotlib, Power BI, Tableau, MS Excel, Flask, Django, Git, GitHub, Docker, CI/CD, Statistics, Agile, SAS, Hadoop, Hive, PySpark, ggplot2, Snowflake, SSIS, Informatica, Talend
- **Databases:** MS-SQL, MySQL, NoSQL, PostgreSQL, MongoDB, SparkSQL, Oracle
- **Data Analysis & Others:** Data Bricks, Google Analytics, Data (Modeling, Mapping, Mining, Extraction, Transformation), Salesforce, JIRA, Confluence, Postman, Big-Query, SAP ERP, Confluence, Alteryx, Google Sheet, Data Warehousing, Data Lakes, Data Databricks
- **Cloud Services:** AWS (S3, Redshift, Snowflake, Lambda, Sagemaker), Microsoft Azure (Data Factory SQL Database), Google Cloud Platform (BigQuery, Data Studio)
- **Soft Skills:** Problem-Solving, Critical Thinking, Communication Skills, Attention to Details, Time Management, Collaboration & Teamwork

---

## Professional Experience

### Data Analyst, JP Morgan

02/2024 – Present | Remote, USA

- Leveraged AWS, specifically Amazon S3, to efficiently store over 500 terabytes of financial data, including 1,200 stock market datasets, 50 economic indicators, and 10,000 news sentiment articles, ensuring comprehensive data coverage.
- Utilized Python libraries (Pandas, NumPy) and SQL for data preprocessing, effectively addressing 95% of missing values and outliers to create high-quality datasets for machine learning, thereby enhancing data integrity and reliability.
- Integrated Snowflake for scalable, secure data warehousing, enhancing access to large datasets and improving data management, enabling efficient querying and analytics across diverse sources.
- Achieved an average prediction accuracy of 84% on test data by implementing machine learning algorithms such as Random Forest, Gradient Boosting, and Support Vector Machines (SVM) in AWS SageMaker, enabling data-driven strategic decision-making.
- Implemented AWS Redshift for data warehousing, optimizing retrieval and analysis processes, which reduced query execution time by 40%, thereby accelerating insights generation and enhancing operational efficiency.
- Developed automated data pipelines with AWS Glue, Python, and SQL, streamlining ETL processes to reduce data processing time by 30% and ensuring real-time data integration for improved business responsiveness.
- Conducted in-depth statistical analysis using Python and R to identify trends and correlations within financial datasets, providing actionable insights that informed investment strategies and risk management practices, contributing to a more data-driven organizational approach.
- Collaborated with cross-functional teams to gather requirements and develop tailored Tableau dashboards and reports, enabling stakeholders to visualize KPIs and make informed decisions based on real-time data.
- Utilized Tableau and Excel for data visualization and analysis, improving reporting efficiency and enabling effective insights presentation for stakeholders, which enhanced decision-making processes.

**Data Analyst, *grabthesite***

- Leveraged Python and SQL to transform raw prescription data into actionable insights, ensuring data accuracy and integrity throughout processing workflows by employing libraries like Pandas and NumPy for efficient data manipulation and analysis.
- Designed and automated ETL processes using Python and SQL, implementing data quality checks to achieve a 95% reduction in data errors, while leveraging cloud-based solutions like AWS S3 and Snowflake for efficient data storage and processing, resulting in a 30% decrease in storage costs.
- Developed predictive models in Python to forecast medication demand and patient outcomes, leading to a 25% reduction in medication shortages through enhanced decision-making and resource allocation.
- Collaborated with healthcare providers and internal teams to ensure accurate data exchange and reporting, managing dashboards that monitored KPIs for over 10,000 patients to facilitate real-time tracking of outcomes.
- Developed interactive dashboards and visual reports in Power BI, enhancing data storytelling and facilitating a 60% improvement in data-driven decision-making across stakeholders.
- Improved data collection and analysis methodologies in Excel, achieving a 20% increase in efficiency while implementing data governance practices to ensure integrity and compliance with industry standards.
- Ensured robust data security and HIPAA compliance while managing over 1 million daily data points, safeguarding patient confidentiality and contributing to a 15% revenue increase.

10/2019 – 07/2022 | Remote, India

**Education**

**Master of Science,**

*University of North Texas*

Computer Science Engineering

**Bachelor of Technology**

*Prasad V. Potluri Siddhartha Institute of Technology*

01/2022 - 12/2023 | Texas, USA

07/2016 - 03/2020 | Andhra Pradesh, India
