SUMMARY

- Experienced **Full-Stack Java Developer** with 5+ years of expertise and a master's degree, specializing in designing and developing scalable web applications and cloud-based **microservice** architectures. Proficient in front-end and back-end technologies, including **Java, Spring Boot, React, Angular**, and **TypeScript**, with extensive experience in building robust APIs, real-time data processing, and seamless system integration.
- Expertise in deploying applications on **AWS**, setting up **CI/CD pipelines** using Jenkins and Terraform, and working with a variety of databases, including **SQL, NoSQL, Oracle**, and **MongoDB**.
- Strong background in microservices, containerization with **Docker** and **Kubernetes**, and securing applications with **Spring Security (OAuth2)**, enhancing both performance and security.
- Experienced in automating backend tasks using Python for improved development workflows and integrating with external systems such as **SAP** and third-party services for seamless data exchange.
- Adept at working in **Agile** environments using **TDD** and **BDD**, continuously improving architectures and delivering high-performance, scalable solutions that meet business requirements.
- Proficient in leveraging **Python** libraries such as Pandas, NumPy, and Requests for data manipulation, numerical computations, and **API integrations**, improving overall application functionality.
- Extensive experience in Agile methodologies, participating in sprint planning, backlog grooming, and daily stand-ups, ensuring efficient and timely delivery of project goals.
- Collaborated with cross-functional teams during Agile sprints to meet deliverables, using tools like **JIRA** and Confluence to track progress and resolve issues swiftly.

TECHNICAL SKILLS

J2EE Technologies: Servlets, JSP, JMS, XML, JPA

Languages: Java, JavaScript, Python, SQL, C

Frameworks: Spring Core, Spring MVC, Spring Security, Struts, Nodejs, Hibernate

Databases: Oracle, SQL, MySQL, Cassandra, MongoDB

Web Services: SOAP, XML, REST – Spring Restful Services

Front End Development tools: jQuery, AngularJS, ReactJS, JSON, TypeScript, HTML, CSS3

Application/Web Servers: WebLogic, WebSphere, Tomcat, JBoss

Build & Integration Tools: Ant, Maven, Jenkins

IDE: Eclipse, IntelliJ IDEA, STS

Source Control Tools: Git

Methodologies: Agile, Waterfall

Cloud: AWS, S3, Redshift, EC2, RDS, Lambda, API Gateway, Azure, GCP.

Professional Experience

Client: Voya Financial, Hartford, CT, USA

Sep 2023 - Present

Role: Java Full Stack Developer

Summary: Voya Financial is a leading provider of retirement, investment, and insurance solutions, helping individuals and institutions achieve financial security and manage their long-term financial goals. As a Java Full Stack Developer at MoneyGram international, accountable for developing high-performance, scalable web applications and microservices using Java, AngularJS, ReactJS, and AWS, implementing CI/CD pipelines for automation.

Responsibilities:

- Develop and maintain full-stack applications using **Java** for the back end and **AngularJS/ReactJS** for the front end, ensuring responsiveness and scalability.

- Design serverless applications utilizing **AWS Lambda**, leveraging cloud services such as **S3, RDS, DynamoDB, and SNS** for scalable and efficient cloud-based solutions. Implement and manage automated **CI/CD** pipelines using **Jenkins, AWS Code Pipeline**, and **GitHub Actions** to streamline build, test, and deployment processes, ensuring continuous delivery.
- Optimized server-side application performance, availability, and scalability by implementing caching strategies (**Redis, Memcached**) and load balancing techniques.
- Develop, deploy, and maintain **microservices using Spring Boot**, enabling faster development cycles and improved system scalability and build and deploy containerized applications using **Docker and Kubernetes**, enabling efficient management, scaling, and orchestration of services in cloud environments.
- Manage both relational **SQL/PL-SQL, Oracle and NoSQL** databases (**MongoDB**), ensuring data integrity, optimized queries, and seamless integration with back-end services.
- Wrote and executed unit tests using **JUnit** and integration tests to ensure code quality, leveraging **TestNG and Selenium** for end-to-end testing. Utilize **Git** for source code version control, enabling collaborative development in a distributed environment with **GitHub, GitLab, or Bitbucket**.
- Experience in writing **Python** scripts for **automation, data processing, and API interactions**.
- Expertise in debugging memory leaks, thread synchronization issues, and performance bottlenecks in large-scale applications.
- Implemented observability tools (**Prometheus, Grafana, and ELK Stack**) for real-time monitoring and alerting.
- Use **Git** for version control, managing code in a collaborative environment, and coordinating with cross-functional teams for smooth delivery.
- Mentored junior engineers, conducting code reviews, knowledge-sharing sessions, and architecture discussions.

Tools and Frameworks: Java, AngularJS/ReactJS, AWS Lambda, S3, RDS, DynamoDB, SNS, CI/CD, Jenkins, AWS Code Pipeline, GitHub, Microservices Architecture, Spring Boot, Docker, Kubernetes, SQL/PL-SQL, Oracle, NoSQL, RESTful APIs, JUnit, OAuth2, JWT, Bitbucket.

Client: CVS Health, Hartford, CT, USA

Jan 2023 – Aug 2023

Role: Java Full Stack Developer

Summary: CVS Health is a healthcare leader integrating pharmacy, insurance, and benefits management to improve patient care and outcomes. In that I created detailed design documentation, developing technical designs, and designing back-end architecture and writing well-designed, testable code, developing multimedia applications, and building applications that meet the client's and user's preferences.

Responsibilities:

- Design, develop, and maintain **Java-based full-stack** applications that enhance healthcare management systems and patient care workflows.
- Ensure all applications and services are **HIPAA-compliant**, securing patient data with encryption, secure authentication, and access control mechanisms.
- Build and maintain microservices using **Spring Boot and Spring Cloud**, ensuring scalability and flexibility of healthcare applications.
- Utilize **AWS Lambda** for serverless functions to handle event-driven architecture for handling healthcare data processing with minimal infrastructure overhead.
- Extensive experience in **AWS (EC2, Lambda, S3, RDS, IAM, ECS, DynamoDB)** and containerized deployments (**Docker, Kubernetes**).
- Familiar with Azure services such as **Azure Functions** and **AKS** (Azure Kubernetes Service) for multi-cloud strategies.
- Implement **CI/CD** pipelines using **Jenkins, Git, and AWS Code Pipeline** to ensure efficient and automated deployment of applications across multiple environments and Develop **Docker** containers for application deployment and manage orchestration using **Kubernetes** to ensure scalability and high availability.
- Build responsive, user-friendly interfaces using **AngularJS, ReactJS, and NodeJS**, enhancing the user experience for both healthcare professionals and patients.
- Implement real-time data processing capabilities for patient monitoring systems, integrating **Java** with tools like **Kafka** for stream processing and Develop systems that comply with healthcare standards like **HL7 and FHIR**, enabling smooth data exchange between different healthcare entities.
- Use tools like New **Relic** and **CloudWatch** to monitor application performance, identify bottlenecks, and ensure the healthcare application runs smoothly.
- Setting up and maintaining continuous integration/continuous deployment (CI/CD) pipelines for efficient development and testing cycles.
- Worked closely with cross-functional teams (**Product, UX, and QA**) to align technical solutions with business goals.

Tools and Frameworks: HIPAA, Spring Boot, Spring Cloud, RESTful APIs, AWS Lambda, CI/CD, Jenkins, Git, Docker, Kubernetes, AngularJS, ReactJS, NodeJS, Java, Kafka, Relic, CloudWatch.

Client: Sanofi, Chennai, India

May 2021 – Aug 2022

Role: Senior Java Developer

Summary: Sanofi is a global biopharmaceutical company focused on healthcare and the development of treatments and vaccines. I focused on keeping up to date with the latest developments in Java technologies and best practices, including new frameworks and tools such as Spring Boot, Hibernate, and Microservices architecture and programming back-end code and software systems and designing the front-end areas of software or websites in the Java coding language.

Responsibilities:

- Implementing microservices architecture with **Spring Boot**, ensuring each service operates independently for better scalability and performance.
- Setting up Continuous Integration and Continuous Deployment pipelines using tools such as **Jenkins and GitLab CI** to streamline development workflows and Leveraging **AWS cloud services EC2, ECS, IAM, S3, Lambda** to build and deploy scalable, cloud-native applications with high availability. Writing efficient database queries and designing schemas for both **SQL and NoSQL** databases, including **MySQL, MongoDB, and Oracle**.
- Developing responsive, interactive user interfaces using **HTML5, CSS3, and JavaScript** frameworks like **AngularJS and ReactJS** and Ensuring application performance by writing optimized, efficient code.
- Ensuring continuous integration and deployment (**CI/CD**) pipelines are maintained for smooth delivery cycles and designing and implementing **RESTful APIs** to facilitate seamless communication between systems and writing automated tests using **JUnit and Mockito** to ensure code reliability and improve application stability.
- Developed and maintained CI/CD pipelines using **Jenkins, GitLab CI/CD**, and automated deployment strategies with **Terraform and Ansible**.
- Working closely with the **DevOps** team to ensure smooth deployments, continuous monitoring, resolving production issues.
- Familiarity with **Ruby on Rails** for developing and maintaining backend services.

Tools and Frameworks: DevOps, JUnit, Mockito, RESTful APIs, CI/CD, HTML5, CSS3, JavaScript, AngularJS, ReactJS, Jenkins, GitLab, Spring Boot.

Client: Deutsche Bank, Bangalore, India

Mar 2020 – Apr 2021

Role: Java Developer

Summary: Deutsche Bank is a global investment bank and financial services company. I involved in designing, developing, and maintaining robust web applications that enhance revenue cycle management processes in Banking operation and work on both the front and back end of websites.

Responsibilities:

- Implementing **key spaces**, tables, and indexes in **Cassandra** database to suit application needs and established continuous integration (**CI**) practices and standards using **Jenkins**. Set up **Jenkins** server and build jobs to provide continuous automated builds based on polling the **Git** source control system during the day and periodic scheduled builds overnight to support development using **Jenkins, Git, JUnit, Selenium** and **Maven** and Used Subversion for configuration Management and **Jira** for task management and bug tracking and Used Net Beans IDE for development and debugging of **Spring Boot** and **Microservices** applications and Implemented **Spring IOC** for inter connection between modules in our application.
- Started as a monolithic application that runs on **JBoss**, later migrated it in to a set of **Spring Boot** and **Node.JS Microservices** and Developed automation of Validation service to provide the **JASPER** report based on bean validations, **Spring** validations on test cases and Design and developed the UI using **HTML5, CSS3, Bootstrap, JavaScript, jQuery, AJAX** and Strong Database design and development experience, which includes developing Stored Procedures, functions using **SQL** and **PL/SQL** in **MS-SQL, Oracle, DB2, PostgreSQL** databases Along with experience in Data, Multithreading and have worked on search techniques and algorithms.

Tools and Frameworks: Unix, Cassandra, Jenkins, Git, JUnit, Selenium Maven, Jira, Node.JS, JASPER, HTML5, CSS3, SQL, Bootstrap, PL/SQL, MS-SQL, Oracle, DB2, PostgreSQL.

EDUCATION

Masters in Computer Information Systems from Rivier University, Nashua, New Hampshire, USA

Certifications:

- AWS Certified Developer Associate
