

BALRAM VIDIYALA

+1(904)792-1768 | vbalu.aero@gmail.com | [Linkedin](#) | Open to Relocate

Professional Summary

- ◆ IT professional with 5 years of experience in building dynamic, high-impact applications across client/server, web services, and distributed systems using J2EE. Proficient in OOA, OOD, and OOP, delivering reliable solutions across all SDLC phases in Agile and Waterfall environments.
- ◆ Expert in Core Java and J2EE technologies, including EJB, JSP, Servlets, JSF, Hibernate, and JDBC, with strong capabilities in designing and developing robust APIs and web services.
- ◆ Extensive experience with Spring Framework modules, including Spring Boot, Spring MVC, Microservices, and REST, successfully designing scalable microservices with Kafka for real-time data processing.
- ◆ Proficient in developing RESTful and SOAP web services to facilitate data exchange between applications.
- ◆ •Skilled in database management using relational (PostgreSQL, Oracle, MS SQL Server) and NoSQL (MongoDB, Cassandra) databases, with proficiency in Unix/Linux environments.
- ◆ Hands-on experience with CI/CD tools such as Jenkins, Docker, and Maven for build automation and deployment, particularly in microservices architecture.
- ◆ Experienced in developing robust applications using C# and the .NET framework, focusing on scalable and efficient solutions.
- ◆ Proficient in software testing principles, including unit and integration testing, using frameworks like JUnit, Mockito, and SonarQube to ensure code quality.
- ◆ Experience in application deployment on AWS and Azure, with knowledge of services like EC2, S3, Lambda, Redshift, Elastic Search, Glue, DynamoDB and many more.
- ◆ Expert in coding and debugging web applications using Python, with a strong emphasis on reporting and data analysis.
- ◆ Proficient in version control and build automation tools, including GIT, Maven, Apache Camel, and ANT.
- ◆ Strong understanding of object-oriented design and programming concepts, with experience in Python frameworks like Django, Webapp2, and Flask.
- ◆ Developed dynamic web applications using JavaScript and TypeScript, enhancing user interactions through effective DOM manipulation.
- ◆ Experience in front-end technologies, implementing responsive design principles in Angular applications and utilizing Angular Material and Bootstrap for improved UI.
- ◆ Developed user interfaces with React, focusing on enhancing usability and user engagement.
- ◆ Utilized Jira for issue tracking and Confluence for project documentation, fostering team collaboration and software quality.
- ◆ Excellent communication skills for effective collaboration with cross-functional teams, stakeholders, and clients.
- ◆ Experienced in logging libraries like Apache Commons Logging and Log4j for application monitoring and troubleshooting.

TECHNICAL SKILLS

Programming Languages	Java, Python, C, JavaScript, HTML, CSS, PL/SQL, C++
Java APIs	J2EE, EJB, Servlets, JSP, JSTL, JDBC, JMS, JAXB, JUnit, Mockito, Spring MVC, Spring Boot, Hibernate, Spring AOP, Spring Security, Apache Kafka.
Frameworks	Spring Boot, Hibernate, Flask, MEAN Stack, Node.js, Express.js, Dotnet
Scripting Languages	JavaScript, TypeScript, jQuery, PHP.
Web Technologies:	HTML/HTML5, XML, CSS/CSS3, Bootstrap, Ajax, React.js, AngularJS, Angular 2.0 and above.
Web/Application Servers:	Apache Tomcat, WebSphere, WebLogic, JBOSS. Java spark
IDE's:	VS Code, Eclipse, NetBeans, IntelliJ
Databases	Oracle, MySQL, MongoDB, PostgreSQL, DynamoDB, RDBMS, SQL Server, DB2
Operating Systems	Windows, MacOS, Unix, Linux (Ubuntu)
Version Control:	Git, SVN, Bitbucket
Others Software Skills/tools used:	AWS, Docker, Apache Kafka, Power BI, Bamboo, Linux/Unix, Kubernetes, Jenkins, Selenium, Unit Testing, REST, SOAP, SOLR, Grafana, Splunk, Kibana, Design Patterns, Algorithms, Data Structures, System Design, Microservices, MS Office, Visio, Adobe Photoshop, JIRA, HPALM.
Build Tools:	Maven, Gradle, Ant

EXPERIENCE

Software Engineer

Intuceo - Jacksonville, FL, USA.

June 2024 – Present

- Involved in all development phases, from requirements to support, contributing to a well-rounded project understanding.
- Created and deployed Dockerized Spring Boot microservices, enhancing scalability and deployment ease.
- Developed interoperable web service modules using SOA principles, creating robust RESTful and SOAP services for streamlined data exchange.
- Gaining practical experience with AWS tools like S3, IAM, Glue, Redshift, Lambda, Kinesis, CloudWatch, and EC2 to enhance cloud deployments.
- Participated in code reviews and QA testing to maintain high-quality standards, catching potential issues early in the development cycle.
- Created internal documentation to support team knowledge sharing and improve project onboarding.
- Participated in pair programming and shadowing sessions, learning best practices from senior developers

Software Developer

Exadata Consulting Private Ltd. – Hyderabad, India.

Aug 2023 – March 2024

- Built a robust backend using Java with Spring Boot, supporting patient management, appointment scheduling, and billing functions.
- Developed a Python microservice for rapid prescription retrieval, improving data access speed.
- Integrated AWS S3 to store and retrieve sensitive documents like prescriptions and scans, ensuring data security and easy access.
- Created a responsive and user-friendly frontend in Angular, featuring intuitive dashboards for both patients and healthcare staff.
- Structured and optimized the SQL database to manage high volumes of patient, doctor, and appointment data efficiently. Designed and deployed an appointment notification system, providing patients with timely reminders via email/SMS.
- Secured backend APIs using JWT, ensuring safe access to patient data and other critical services.
- Achieved high code reliability with JUnit and Mockito tests, reaching over 90% test coverage for backend components.
- Integrated Grafana and Splunk for real-time application monitoring, allowing immediate insights into system health and performance.

Software Developer

AHD IT Solutions Pvt Ltd. – Hyderabad, India.

March 2021 – July 2024

- Developed and maintained a billing software application using Java and Spring Boot, which helped businesses automate their invoicing process and manage financial transactions more efficiently.
- Designed and implemented microservices for key billing functions like invoice generation and payment processing, allowing for a more modular and scalable application that could grow with user needs.
- Utilized Python to create data retrieval services that fetched real-time financial data from external sources, ensuring users always had accurate and up-to-date billing information at their fingertips.
- Crafted dynamic user interfaces with Angular, making it easy for users to navigate through invoice management, client records, and financial reports with a smooth and intuitive experience.
- Leveraged AWS Lambda to build serverless functions that processed payment notifications, simplifying the workflow and speeding up the payment confirmation process for users.
- Developed RESTful APIs to connect the frontend and backend, allowing for real-time updates and notifications, so users could always stay informed about their billing activities.

- Implemented client-side functionality with JavaScript, enabling users to filter, search, and sort billing records effortlessly, which enhanced their overall experience with the application.
- Conducted unit and integration testing using JUnit and Selenium, ensuring that core billing features worked reliably, giving users confidence in the software's performance.
- Collaborated closely with product managers and stakeholders to gather requirements and provide input on user stories, ultimately leading to a feature-rich billing application that truly meets the needs of Indian businesses.

Associate Software Engineer

SS&C EZE Software India Pvt Ltd.–Hyderabad, India.

Dec 2019 – Feb 2021

- Undergone industrial training on various technologies like .NET Core, C, Java, AngularJS, Node.js, SQL, and Python and part of Agile development.
- Responsible for creating custom ETL templates and reconciliation with internal data.
- Responsible for the development of our Reconciliation UI in Eze Soft application with a real-time, user-friendly, fast, and optimized interface using AngularJS and Node.js.
- Converting most legacy SQL procedures into Python code using the Pandas library.
- Collaborated with an Agile team of 9 and helped prioritize and scope feature requests to ensure that the highest impact features were worked on first.
- Responsible for continuous integration and deployment of code in reconciliation services.
- Resolved major bugs, resulting in an increase in user retention by 60%.
- Optimized applications for scalability and maximum speed.
- Designed and implemented data storage solutions that increased application performance.
- Conducted testing and debugging to ensure the functionality and performance of web pages.
- Engaged in regular meetings and discussions to understand project requirements and provide updates on progress

Software Development Engineer Intern

Amazon Development Centre India–Hyderabad, India.

Feb 2019 – Aug 2019

- Developed the FDP Global Search Project to globally search through the entire registry data of the Fast Data Pipelines platform team using AWS Elasticsearch, enhancing operational excellence for FDP team admins.
- Managed testing and deployment of the code in FDP core services within the production environment, ensuring stability and reliability.
- Enabled user-friendly interactions with platform data, providing a one-click solution for searching logical runs, physical runs, and any strings from the data graph definition.
- Oversaw the continuous migration of data from DynamoDB to AWS Redshift, utilizing ETL jobs with Andes and EDX technologies to generate business metrics for the Fast Data Pipelines team.
- Created complex SQL query templates for generating business metrics within specified time ranges, facilitating data analysis.
- Implemented Date-Time parameters in the Jolt Transformation Plugin using the Time Stock function for enhanced data processing.

- Configured the Elasticsearch cluster in a VPC with NLB, supporting continuous data migration using data graphs.
- Enhanced the Elasticsearch Publisher plugin to be more generic by adding parameters for default ID/type and allowing user-defined primary keys for data publishing in AWS ES.

Data Analyst Intern

Synchrony Financial Services–Hyderabad, India.

Oct 2018 – Jan 2019

- Developed an interactive data visualization project using Python as a proof of concept (POC).
- The visualization tool aids in detecting fraudulent merchants with compromised machines.
- Utilized Java for data processing and visualization, resulting in cost savings compared to licensed solutions like Tableau and Power BI.
- Completed basic training in Java, enhancing my understanding of object-oriented programming and software development principles.
- Participated in boot camps focused on the business flow of credit card life cycles, statistics, and the introduction of SAAS tools, gaining valuable insights.
- Reviewed and manually tested codes and models to deepen my understanding of the development process.

Academic Projects

- **Mini Project: A System for Profiling and Monitoring Database Access Patterns for Anomaly Detection**
 - Led a team of three to create an application using Java, HTML, JDBC, and JSP.
 - The system detects malicious users attempting to tamper with profiles or alter data, preventing false authentication and helping organizations protect against insider threats.
- **Major Project: Sentiment Analysis on Product Reviews**
 - Led a team of three to develop a machine learning project using R.
 - This project addresses sentiment polarity categorization by analyzing emotions and opinions expressed in reviews through keyword analysis, generating statistical results.

Education

Bachelor of Technology, Information technology
CVR College of Engineering , India

Aug 2015 – June 2019
8.8/10 GPA

Certifications

- **AWS certified Solutions Architect Associate (SAA-C03)**
