

Bharath Banoth

SQL/Power BI Developer

bharathnaikb158@gmail.com

+1 (216)-463-8420

PROFESSIONAL SUMMARY:

- Experienced **SQL / Power BI Developer** with **5+ years** of IT experience in analysis, design, development, testing, and implementation of **ETL and Business Intelligence (BI)** solutions across **Data Warehouse / Data Mart** environments.
- Proficient in MSBI Stack (SSIS, SSRS, SSAS), SQL Server (2019/2016/2014), Power BI, and **Azure Services** (ADF, Synapse, Data Lake Storage, Azure SQL Database).
- ETL Development expertise in data extraction, transformation, and loading using **SSIS, Azure Data Factory, DTS, Bulk Insert, and BCP**, ensuring optimized data workflows and reliable data migration.
- Data Integration experienced in migration and transformation between heterogeneous databases such as **Oracle, SQL Server, MySQL, and PostgreSQL**.
- **Data Quality & Automation** performed comprehensive data validation, cleansing, and mapping to ensure accuracy; automated ETL processes using **SQL scripts, stored procedures, and ADF pipelines**.
- **Data Modeling & Analytics**: Skilled in **OLTP/OLAP modeling**, creating **tabular and cube models**, and writing advanced **DAX and MDX queries** for analytical insights.
- Reporting & Visualization designed and deployed **interactive dashboards, parameterized reports, scorecards, and KPIs** using Power BI and SSRS to support executive decision-making.
- Performance Optimization hands-on experience in tuning complex SQL queries, stored procedures, and views using SQL Profiler, **DMVs**, and execution plans for optimal performance.
- Azure & Cloud Integratio built scalable **ADF pipelines**, leveraged **Synapse** for big data processing, and integrated with **Azure Data Lake Storage (Gen2)** for cloud-based analytics.
- Database Design Strong background in **logical and physical design** using **Erwin**, along with job scheduling, alerts, and SSIS package management.
- Modern BI Practices experienced in **modernizing BI/ETL processes**, implementing **low-code / digital transformation** initiatives, and integrating **AI Builder and Microsoft Copilot** for intelligent workflows.
- Collaboration & Support supported **SIT/UAT testing**, resolved defects, and delivered enhancements based on user feedback; familiar with **ITIL practices** and **ServiceNow** for incident/change management.
- Additional Tools experience in cross-platform reporting using **SQL Server, Access, Crystal Reports, and Excel**; applied **Python / R** for automation and analytics.

TECHNICAL SKILLS:

- **Databases / Data Warehousing**: Snowflake, Microsoft SQL Server (2019 / 2017 / 2016 / 2014 / 2012)
- **ETL & Data Integration Tools**: SQL Server Integration Services (SSIS), Knime, Alteryx, SQL Server Agent, Visual Studio, SQL Server Data Tools (SSDT)
- **Business Intelligence & Reporting Tools**: Power BI, SSRS, SSAS, Tableau, Looker Studio, Microsoft Visio, SharePoint
- **Programming Languages**: SQL, T-SQL, PL/SQL, Python, Java, HTML, CSS
- **Database Modeling**: Star Schema, Snowflake Schema, Fact and Dimension Tables, Erwin Data Modeler
- **Identity & Access Management (IAM)**: SailPoint IdentityIQ, SailPoint IdentityNow, Active Directory, Azure AD, ServiceNow, Workday
- **Cloud & Microsoft Platforms**: Azure Data Services, Power Platform, Microsoft Office Suite (Excel, Word, PowerPoint, Visio), Jira, Confluence, MS Project
- **Data Visualization & Analytics**: Power BI, Tableau, Looker Studio, Matplotlib, Seaborn
- **Version Control / Source Management**: GitHub, Azure DevOps, Microsoft Team Foundation Server (TFS)

Master of Science (MS) in Management Information Systems

Cleveland State University, Cleveland, OH

PROFESSIONAL EXPERIENCE:

Client: -Kaiser Permanente, CA

Role: - SQL/Power BI Developer

Mar 2024 to Current

Responsibilities:

- Engineered and optimized SSIS ETL workflows in Visual Studio 2019, **reducing data processing time by 35%** across multi-source integrations (Excel, Salesforce, Intacct, SQL Server).
- Migrated **SSIS packages from SQL Server 2014 to 2019**, improving performance, reliability, and maintainability.
- Authored and optimized **complex T-SQL scripts**, improving query performance by **40%** through execution plan analysis and indexing strategies.
- Enhanced reporting query performance through **temporary tables, table variables, and indexing strategies**.
- Performed **backup, restore, and release deployments** as part of regular database maintenance and release cycles.
- Optimized **legacy IBM DataStage jobs**, reducing pipeline execution time and improving process efficiency.
- Experienced in **data migration, transformation, and validation** across multiple data sources and environments.
- Familiar with **workflow automation tools** such as **Knime and Alteryx** to improve data preparation and transformation efficiency.
- Developing working knowledge of **Snowflake** as a modern cloud data warehouse platform, leveraging SQL and data modeling expertise.
- Partnered with cross-functional teams and **business stakeholders** to gather requirements, **delivering 20+ custom Power BI dashboards** that enhanced data visibility and decision-making.
- Designed and developed **interactive Power BI dashboards** with a variety of visuals (bar/column, waterfall, gauges, pie, treemap, etc.) to drive actionable insights.
- Published and managed reports in **Power BI Service** with configured **data gateways, scheduled refreshes, and data-driven subscriptions**.
- Designed and deployed **SSRS 2019 reports** (tabular, matrix, drill-down/drill-through, parameterized) using stored procedures and shared datasets.
- Configured and administered **SSRS environments**, including **installation, deployments, caching, snapshots, and subscriptions**.
- Integrated **SharePoint Online data sources** with BI dashboards and managed **role-based access control** for secure report delivery.

Client: -Sutter Health, CA

Aug 2023 to Feb 2024

Role: - BI/SSIS Developer

Responsibilities:

- Defined **system architecture** and designed **scalable logical and physical data models** using **Erwin Data Modeler**, supporting enterprise BI and reporting solutions.
- **Developed and migrated SSIS ETL packages** (SQL Server 2008 → 2012), optimizing workflows and improving reliability and performance.
- **Automated high-volume data loading** using **BCP and Bulk Insert utilities**, enhancing data processing efficiency.
- **Wrote and optimized complex T-SQL scripts** (stored procedures, functions, triggers, CTEs, cursors) to reduce query runtimes and resource consumption.
- Performed **query optimization and performance tuning** using **SQL Profiler, DMVs, and execution plans**, achieving up to **30% improvement** in report execution times.
- Implemented **indexing, partitioning, and query optimization** strategies for improved database performance.
- Automated maintenance activities such as **reindexing, statistics updates**, and proactive monitoring through **SQL Agent Jobs**.
- **Enhanced database security** by defining user roles, managing access controls, and supporting **audit compliance**.
- Hands-on experience with **Oracle, SQL Server, MySQL, and PostgreSQL**, enabling seamless data integration across heterogeneous environments.
- Collaborated with business stakeholders to **gather requirements** and recommend effective **reporting solutions** via **Power BI or SSRS**, balancing complexity and usability.
- Installed, configured, and maintained **Power BI Desktop and Report Server**, supporting **on-premises deployments** and secure **role-based access**.

- Designed and published **interactive Power BI dashboards** (SQL Server, Excel, Flat Files, SAP BW/BI) with **row-level security** to protect sensitive data.
- Delivered **rich visualizations** (bar/column charts, KPIs, treemaps, gauges) to provide actionable business insights.
- Designed and deployed **SSRS reports** (tabular, matrix, drill-through, parameterized) using stored procedures and shared datasets.
- **Integrated SharePoint Online** lists with SQL Server and Power BI dashboards, enabling **self-service analytics** and **workflow automation**.
- **Documented ETL workflows**, staging logic, and reporting processes to support compliance and ensure knowledge transfer.
- Supported **SIT/UAT testing** and production deployments, resolving defects and ensuring BI solutions met performance and business requirements.
- Contributed to **digital transformation initiatives** by recommending **low-code/no-code automation solutions**, improving operational efficiency and governance.
- Continuously enhanced skills by exploring **Kinaxis Maestro** for supply chain planning and preparing for **Microsoft Power BI Data Analyst (PL-300)** certification to advance BI and DAX expertise.

Client: - Dew Software, Remote

Nov 2019 to May 2022

Role: - SQL/ETL Developer

Responsibilities:

- **Designed and developed SSIS packages** to extract, transform, and load (ETL) data between SQL Server and flat files, implementing control flow tasks, event handlers, checkpoints, and robust error handling.
- Built and optimized **ETL workflows** for large insurance datasets with a focus on data transformation, cleansing, validation, and quality assurance.
- Created and maintained database objects (tables, views, stored procedures, triggers, and functions) to support enterprise business applications.
- Developed **complex T-SQL scripts** to automate business logic, enforce data integrity, and streamline operational processes.
- Performed database performance tuning using SQL Profiler, execution plans, indexing strategies, and partitioning, reducing query runtimes and improving scalability.
- Implemented **indexed views and table partitioning** for optimized performance on large, transactional data sets.
- Expertise in **DML, DDL, and DCL statements** for efficient data management, definition, and access control.
- Utilized **Erwin Data Modeler** to **reverse-engineer databases** and align logical/physical data models with evolving business requirements.
- Designed and published **SSRS reports and dashboards** (charts, KPIs, trend and forecasting analysis) with **drill-downs, filters, and parameterized options** for executive and business users.
- Built **monitoring and validation reports**, custom mapping utilities, and **process logging frameworks** to enhance ETL reliability and ensure **data governance compliance**.
- Automated **maintenance tasks** and **recovery procedures** using **SQL Server Agent Jobs** for backups, index optimization, and proactive system monitoring.
- Conducted **unit testing, debugging, and defect resolution** for stored procedures, triggers, and ETL workflows to ensure accuracy, reliability, and production readiness.
- Collaborated with **cross-functional teams** (DBAs, analysts, QA, and business users) to ensure smooth deployments, effective data integration, and adherence to governance standards.
