

Brendan Henry

Hampstead, MD | 443-847-1970 | brendan.henry624@gmail.com

Results-oriented Software Engineer with 5+ years of experience in designing, developing, and optimizing scalable Java-based applications. Specializing in cloud-hosted RESTful APIs, microservices architecture, and robust back-end systems using Java, Spring Boot, and AWS technologies. Adept at collaborating within Agile teams to deliver high-quality, reusable, and resilient applications that align with business goals and needs. Committed to driving innovation, enhancing system reliability, supporting long-term team success, and continually learning new technologies alongside their implementations to improve processes and solutions.

Skills/Tools

Programming Languages: Java, JavaScript, SQL

Cloud Technologies: AWS (S3, Lambda, EKS, EC2), Docker

Development Tools: Git, Screwdriver, Mockito, JUnit, Cucumber

Build Tools: Maven, Gradle

Frameworks: Spring Boot, React, Node.js

Databases: MySQL, AWS Aurora

Methodologies: Agile, Scrum

Professional Experience

Sterling Sound & Vision | Owings Mills, MD

June 2025 – Present

WAREHOUSE MANAGER | SYSTEMS ENGINEER

- Coordinate logistics operations to ensure inventory is received and staged smoothly while integrating software-driven improvements to enhance productivity and efficiency.
- Develop and deploy Python scripts to improve workflow processes, reducing labor overhead and increasing efficiency across multiple departments.
- Implement innovative systems to automate workflows, increasing overall productivity and enabling my co-workers to focus on more critical operational issues.
- Continuously seek and identify opportunities to enhance processes while integrating technology that facilitates smoother operations and supports the team's overall productivity.

Yahoo! Inc. (formerly Verizon Media) | Baltimore, MD

Oct. 2020 – Sep. 2024

SOFTWARE DEVELOPER ENGINEER

Apr. 2022 – Sep. 2024

- Designed and implemented end-to-end Java-based JEE applications using Spring Boot, adhering to

micro-services architecture for scaleable and modular back-end systems.

- Developed and managed RESTful APIs to support seamless integration of internal functionality and third-party services, with robust error handling and secure data transactions.
- Optimized ad-serving system performance to achieve sub-200ms response times, leveraging AWS S3, Lambda, and EKS for resilient and scaleable solutions.
- Led database migrations using MySQL and AWS Aurora, ensuring data integrity and operational efficiency while mitigating potential labor and cost overruns.
- Actively contributed to architectural improvements, focusing on code re-usability, modular design, and optimized deployment strategies.
- Mitigated approximately \$50,000 in costs and 80-programmer hours during a critical database migration project.
- Successfully migrated jobs to AWS services, improving back-end reliability and reducing operational downtime.

ASSOCIATE DEVELOPER ENGINEER

Oct. 2020 – Apr. 2022

- Developed and executed unit, integration, and Cucumber tests to ensure software quality and reliability across critical application components.
- Collaborated with a specialized team responsible for reviewing and approving core application updates, contributing to the seamless integration of new features that I personally coded and tested.
- Operated in a full-stack development environment, rigorously testing functionality from the front-end interface to back-end database operations within a local setup.
- Worked within a Scrum team to deliver full-stack solutions, with a focus on designing high-performing, user-centric interfaces using modern frameworks.

Catalyte | Baltimore, MD

Dec. 2019 – Oct. 2020

DEVELOPER 1

- Gained hands-on experience in full-stack development, working with cross-functional teams to deliver practical, business-aligned solutions.
- Enhanced skills in Java, Spring Boot, and modern web technologies (React, Node.js, HTML5/CSS, TypeScript).
- Developed and implemented new features that improved application usability, directly contributing to stakeholder satisfaction.
- Fostered an understanding of Agile methodologies, including iterative development and collaborative project planning.

Training/Education

- Software Developer Training - Catalyte (2019)
