Objective

• Initiative-taking and meticulous PEGA Developer with over 3 years of experience in business process automation and case management. Adept at leading teams and delivering high-quality, scalable PEGA solutions that align with business goals, reducing inefficiencies by over 50%. Eager to leverage my technical expertise in Pega PRPC, BPM, and cross-functional collaboration to contribute to complex enterprise solutions that align with business goals, I aim to contribute meaningfully to organizational success while embracing the philosophy that “Improving is better than Proving.”

Skills

- Pega | Pega PRPC | Pega BPM | Pega Application Development | JAVA | HTML5 | SQL | Python | C | Oracle SQL | PLSQL | R | CSS | XML | JSON | GraphQL | Agile Methodologies | SCRUM
- Algorithms | Database Management System | Data Structures | MS – Office | Programming | Agile Methodologies | Statistical Analysis | Troubleshooting

Professional Summary

• Experienced Software Engineer specializing in PEGA development, with a proven record of designing and implementing complex case management systems and optimizing workflows, resulting in up to a 50% increase in efficiency. Demonstrated success in integrating legacy systems and ensuring seamless upgrades to PEGA Infinity, which minimized system downtime by 20%. Adept at leading cross-functional teams to deliver scalable, high-quality solutions that align with business goals. Proficient in PEGA PRPC, Java, SQL, and API integrations, with hands on experience in reducing post-production issues by 20%.

Experience

Graduate Intern	<u>HighMark Health</u>	<i>Pittsburg, USA</i>	05/2024 – Present
• Managed a cross-functional team, coordinating efforts across development and design, and delivering critical projects under tight deadlines. • Led the development and implementation of the Broken Queue Count feature, which reduced queue bottlenecks by 30% and improved system reliability by minimizing breakdowns. This improvement increased team productivity by streamlining queue management. • Designed and implemented a user-friendly Guided Tour feature in PEGA, resulting in a 15% improvement in user engagement and reducing support ticket requests by 10%. • Consistently met project deadlines, received positive feedback from the clients and contributed to improving overall team productivity. • Delivered robust solutions leveraging Pega PRPC and BPM methodologies, improving system scalability and aligning with enterprise goals. • Validated and solved all the errors when environments are upgraded to PEGA Infinity. • Documented the purpose and resolution steps, including the business impact, to reduce the broken count.			
Software Engineer	<u>Verizon Data Services</u>	<i>Hyderabad, India</i>	08/2021 - 07/2023
• Led a team in the development of user-facing modules, ensuring timely delivery and adherence to business requirements. • Led the development of a user-centric admin tool interface in PEGA, improving ease of use and reducing admin task completion by 20%. • Designed and implemented advanced conditioning features using PEGA, which enhanced system functionality by automating business logic. • Engaged in cross-functional collaboration with stakeholders to ensure seamless integration of features and the delivery of a robust system. • Collaborated closely with QA, testing and validating PEGA modules, resulting in a 20% reduction in post-production defects and enhancing the quality of delivered solutions. • Delivered modules on time and within budget by leveraging modern tech tools. Acquired hands on expertise with PEGA, SQL, Oracle DB, GraphQL, and API Integration. • Led the migration of Legacy systems to PEGA 8.3, minimizing system downtime and enhancing the overall efficiency. • Mentored junior developers in PEGA best practices, contributing to overall improvement in team capability and knowledge sharing. • Monitored and optimized system performance through regular debugging and performance tuning, ensuring minimal latency in production.			
Software Engineer Intern	<u>Chip In Tech</u>	<i>Bangalore, India</i>	05/2019 - 08/2019
• Contributed to the design, development, and testing phases of a project under the guidance of senior team members. • Performed data collection, analysis, and reporting tasks using tools like Excel, SQL, or data visualization software. • Conducted unit testing and debugged software issues to ensure smooth functionality. • Prepared and maintained technical documentation, user guides, or reports related to project development or research tasks. • Communicated with clients or stakeholders to understand project requirements and assisted in translating client requirements into technical specifications.			
Pega System Architect	<u>Talent Sprint</u>	<i>Hyderabad, India</i>	01/2020 - 02/2021
• Certified as a Pega System Architect, demonstrating proficiency in Pega’s application development tools and methodologies. • Gained hands-on experience in developing end-to-end solutions using Pega, including workflow automation and case management. • Collaborated with cross-functional teams to design and implement Pega-based applications tailored to business requirements. • Optimized business processes by developing scalable, maintainable, and efficient Pega applications. • Ensured application quality through extensive testing and debugging, enhancing system reliability. • Developed and deployed multiple projects leveraging Pega’s platform to streamline complex business operations.			

Education

Master's	<u>Northern Arizona University</u>	Flagstaff, AZ, USA	08/2023 – Present
Major in Computer Science; GPA: 3.89			
Bachelor's	<u>Lovely Professional University</u>	Punjab, India	08/2017 – 05/2021
Major in Computer Science; GPA: 8.60			

Certifications

Certified in Pega as System Architect CERTIFICATE	AUGUST 2020
Certified in Pega as Senior System Architect CERTIFICATE	MARCH 2021
