- Web Application Tools: HTML, JavaScript, XML, JSP, angular JS and JSF.
- Database: RDBMS.
- I am Oracle Certified Java Developer. (OCJP Certification done).
-
- **BE Project**
 - *Application Développeur*
 - The project aims to cover every crime in the Pune district. Crime watch is a community-driven website that
 - will cover every crime in Pune district and make go-to spot for Crime data. It is sorted by suspect and victim profiles where it breaks down each person's name, age, gender as well as original articles reported by Police stations. We have designed an interactive map which will mark each violent crime by location with an icon within Pune district boundaries. When you click on the icon you will be transferred to the respective crimes profile page .Ideally, with so much information about each place and associated crimes we have used clustering algorithms for a data mining approach to help detect the crimes patterns and displayed the results graphically to speed up the process of solving crime.
 -
- **PG-DAC Project**
 - The E-Wallet application enables users to recharge mobile, payment of broadband bills, money transfer feature available for desktop users. As a concern the customers uses a easy user interface so the money can be transferred in an easy manner .E-Wallet is the web application which holds virtual money and provide easy way to make online payment for all e-commerce applications. It is attached with bank account, merchants and vendors which make transactions safe by using secure payment gateway.
 -
