

AISHWARYA RAO Data Analyst VA, USA +1 (972) 338 9014 aishwarya143639@gmail.com LinkedIn	
SUMMARY	
Data Analyst with over 4+ years of experience in healthcare analytics and ERP-based business operations, specializing in SQL, Python, Power BI, Excel, and ERP systems (Sage 300, X3, Intacct). Skilled in analyzing large-scale medical claims and finance, inventory, and sales data to drive actionable insights, optimize reporting, and improve operational efficiency by up to 30%. Experienced in developing dashboards, data validation checks, and predictive insights, while collaborating closely with cross-functional teams including clinical, actuarial, finance, and IT stakeholders to ensure accurate, compliant, and timely reporting. Adept at streamlining processes, supporting ERP implementations, and delivering high-quality analytics solutions for enterprise and SMB clients.	
TECHNICAL SKILLS	
Languages	SQL, Python, R, DAX, Power Query (M), Bash
Frameworks & Libraries	Pandas, NumPy, Matplotlib, Seaborn, ggplot2, dplyr, tidyverse, dbt
Database	Microsoft SQL Server, PostgreSQL, MySQL, Google BigQuery, MongoDB
Visualization Tools	Power BI, Tableau, Looker Studio, Microsoft Excel (Pivot Tables, Power Query), Canva
Tools	Jupyter Notebook, Visual Studio Code, Git, Jira, Confluence, Google Sheets, SharePoint, Microsoft Excel
Data Warehousing	Azure Synapse Analytics, Data Modeling (Star Schema), Fact & Dimension Tables
Data Governance & Documentation	Data Quality & Validation Checks, Data Reconciliation, CMS & Medicaid Reporting Standards, HIPAA Awareness, Business Requirements Documentation (BRD), Data Dictionaries
EXPERIENCE	
Data Analyst Anthem Inc., TX, USA	Jul 2024 – Present
- Analyze enrollment, eligibility, and medical claims data across Individual, Employer, Medicare, and Medicaid plans to identify utilization patterns, emerging risk segments, and shifts in member behavior. - Design and maintain Power BI dashboards that monitor claims turnaround time, provider performance, and care gap metrics, improving executive visibility and reducing ad-hoc reporting requests by ~30%. - Evaluate inpatient, outpatient, and pharmacy claims using complex SQL queries to uncover high-cost procedures and recurring utilization drivers, informing initiatives that address nearly 20% of total medical spend. - Interpret preventive care compliance and chronic condition trends by segmenting members based on age, geography, and plan type, supporting population health and value-based care strategies. - Develop Python-based data quality and reconciliation checks across 1M+ monthly claims records, improving data reliability and reducing downstream reporting discrepancies by 25%. - Partner with clinical, actuarial, and compliance stakeholders to translate healthcare requirements into analytical outputs, ensuring 100% on-time CMS and Medicaid reporting. - Optimize recurring Excel and reporting workflows through automation and standardization, decreasing manual preparation time while improving consistency across monthly and quarterly deliverables.	
Data Analyst Sage Softtech, India	Jan 2020 – Aug 2022
- Worked closely with ERP data covering finance, inventory, and sales from Sage 300, Sage X3, and Sage Intacct to support daily reporting needs for SMB clients. - Built Power BI dashboards by connecting core ERP modules to track revenue movement, stock levels, and order fulfillment, reducing manual reporting effort by 30%. - Looked into transaction-level issues using SQL and reconciliation checks, identifying posting gaps and valuation errors that improved report accuracy by 20%. - Put together Excel summaries for cash flow, receivables, payables, and inventory status, helping finance teams complete reviews faster and with better clarity. - Used historical ERP data to support demand planning and sales forecasting, contributing to inventory optimization and reducing excess stock by 15%. - Helped during ERP implementations by validating migrated data and confirming consistency across finance, sales, and operations modules after go-live. - Worked alongside consultants and clients to understand business rules and turn reporting needs into clear, actionable insights aligned with ERP configurations.	
EDUCATION	
Masters in Computer Science	May 2024
University of North Texas, TX	
Bachelors in Computer Science	May 2022
Kakatiya University, India
