

Mahesh Guduru

Financial Data Analyst

Milwaukee, WI | +1 (414) 539-7794 | maheshguduru2026@gmail.com | [LinkedIn](#)

SUMMARY

Financial Data Analyst with 3+ years of experience translating complex financial data into clear, actionable insights that support informed decision-making. Strong expertise in SQL, Python, and BI tools to automate reporting, improve data accuracy, and enhance financial visibility. Brings practical exposure to AI and machine learning techniques to strengthen forecasting, risk analysis, and trend detection. Trusted partner to finance and business stakeholders, known for clarity, precision, and analytical rigor.

SKILLS

Programming & Databases: SQL (CTEs, Joins, Window Functions), Python (Pandas, NumPy), Advanced Excel (Pivot Tables, Power Query, Lookups, VBA basics), Data Modeling

Financial & Business Analysis: Financial Reporting, Forecasting & Budgeting, P&L Analysis, Variance & Trend Analysis, Revenue & Cost Analysis, Risk Analysis, KPI Development, Executive & Management Reporting

Data Analytics & Statistics: Data Analysis, Exploratory Data Analysis (EDA), Time-Series Analysis, Statistical Analysis, Anomaly Detection, Data Validation, Root Cause Analysis, Data Quality Management

Visualization & BI Tools: Power BI, Tableau, Interactive Dashboards, Data Storytelling, Ad-hoc & Automated Reporting

AI / ML Exposure: Predictive Analytics, Regression & Classification Models, Forecasting Models, Feature Engineering (Basic), Model Performance Evaluation

Tools & Platforms: Jupyter Notebook, Git, APIs, ETL Pipelines, Relational Databases (PostgreSQL, MySQL, SQL Server), Cloud Platforms (AWS / Azure – basic exposure)

Professional Skills: Stakeholder Communication, Business Requirement Gathering, Problem Solving, Attention to Detail, Cross-Functional Collaboration, Documentation

EXPERIENCE

Financial Data Analyst, Charles Schwab, USA

Jul 2025 – Present

- Improved financial forecasting accuracy by 18% by building Python- and SQL-based variance models across 12+ portfolios, enabling leadership to evaluate revenue movement, expense behavior, and quarterly outlook with greater confidence.
- Reduced executive reporting turnaround time by 35% by automating 20+ recurring Excel reports into Power BI dashboards, allowing faster monthly close reviews and improved visibility into trading and operational financial metrics.
- Identified \$1.6M in annual cost leakage (9%) by analyzing multi-year P&L trends across operations and brokerage functions, helping stakeholders prioritize corrective actions and renegotiate vendor-level cost structures.
- Increased financial data reliability by 25% by implementing SQL-based validation checks on 5M+ transaction records, significantly reducing reconciliation gaps between source systems and downstream reporting layers.
- Strengthened liquidity monitoring by 20% by designing rolling cash-flow and exposure views covering \$800M+ in assets, supporting treasury teams with timely insights into short-term funding and capital allocation decisions.

Data Analyst, Metlife, USA

Sep 2024 – Jun 2025

- Enhanced revenue visibility by 22% by defining standardized KPIs across 8 business units, integrating SQL datasets with Tableau dashboards to support leadership reviews, budgeting discussions, and performance tracking cycles.
- Lowered recurring reporting discrepancies by 30% by aligning transformation logic and validation rules across 15 financial reports, improving consistency between actuarial, finance, and operations data outputs.
- Shortened quarterly close analysis time by 40% by developing Python-driven variance summaries and Power Query automations, reducing manual reconciliation effort and accelerating insight delivery to finance managers.
- Supported enterprise risk reviews affecting \$120M in annual premiums by examining claim trends and anomaly patterns, enabling data-backed assessments of loss ratios and emerging exposure areas.

SQL Developer, Hexaware Technologies, India

Jan 2022 – Aug 2023

- Accelerated financial query performance by 45% by tuning joins, indexes, and window functions across 10+ SQL Server databases, improving response times for downstream reporting and analytics teams.
- Enabled management reporting for 6 enterprise clients by developing reusable SQL views supporting revenue, cost, and utilization analysis, ensuring consistent metric definitions across multiple delivery engagements.
- Cut reconciliation effort by 50% by creating automated SQL validation scripts for 2M+ daily records, reducing manual cross-checks and improving trust in operational and financial datasets.
- Improved dashboard accuracy by 20% by restructuring database schemas and correcting historical data gaps, strengthening alignment between transactional systems and reporting layers.

Operations Analyst, Ascent Softech, India

May 2021 – Dec 2021

- Increased operational reporting accuracy by 28% by consolidating data from 5 manual sources into a centralized Excel model, enabling consistent tracking of volumes, errors, and turnaround metrics.
- Reduced daily processing time by 2 hours (33%) by redesigning workflow trackers and automating calculations, allowing teams to focus more on exception handling and operational reviews.
- Delivered trend analysis supporting ₹18L in monthly transactions by reviewing volume patterns, error frequency, and processing delays, helping supervisors identify recurring operational bottlenecks.
- Raised data consistency by 25% by standardizing reporting templates across 4 operational teams, ensuring uniform interpretation of metrics during weekly and monthly performance discussions.
- Strengthened audit preparedness by 30% by documenting data flows, control checkpoints, and standard procedures, reducing clarification cycles during internal and external audit reviews.
- Supported management decision-making by summarizing weekly performance metrics across 1,200+ transactions, enabling quicker assessment of productivity levels and service delivery gaps.

EDUCATION

MS in Information Technology Management (AI & Data Analytics)

University of Wisconsin-Milwaukee, Milwaukee, WI

Sep 2023 – Dec 2024

Bachelor's Degree: Bachelor of Commerce (Computer Applications)

Osmania University, Hyderabad, India

May 2020 – Jun 2023

PROJECTS

AI for Automatic Classification of Knee Arthritis from X-ray Images

- Implemented a machine learning model to classify knee arthritis stages using custom vision techniques, improving diagnostic accuracy in healthcare.

Tools: Python, TensorFlow, OpenCV.

Open AI Chatbox Using Python

- Built a conversational AI chatbot using OpenAI GPT-3 API for interactive user queries.

Tools: Python, OpenAI API, NLP.

Virtual Piano Application Using Python

- Designed a virtual piano app in Python using Tkinter for GUI and Pygame for sound generation, showcasing real-time audio processing.

Tools: Python, Tkinter, Pygame.

Python-Based Network Speed Test Application

- Created a network speed test application to assess internet bandwidth using Speedtest API and display results through a Tkinter GUI.

Tools: Python, Speedtest, Tkinter.

CERTIFICATION

Accenture North America - Data Analytics & Visualization Job Simulation

PwC Switzerland - Power BI Job Simulation

Cognizant - Agile Methodology & Artificial Intelligence Job Simulations

Tata Data Visualization - Empowering Business with Effective Insights Job Simulation

Udemy - Machine Learning A-Z: Hands-On Python & R in Data Science
