

# Saisanjana Chidipothu

## Data Analyst

McLean, VA, USA | [sanjana.chidipothu.001@gmail.com](mailto:sanjana.chidipothu.001@gmail.com) | (571) 919-0917 | LinkedIn: [www.linkedin.com/in/sanjanachidipothu](https://www.linkedin.com/in/sanjanachidipothu)

### SUMMARY

- **Data Analyst** with **4+ years** of experience delivering end-to-end analytics using Python, SQL, and statistical techniques to build automated data pipelines, optimize ETL workflows, and support high-impact decision-making across public and private sectors.
- Expert in business intelligence and reporting, translating complex operational, financial, and customer datasets into actionable insights through **Power BI, Tableau, and Advanced Excel**, improving KPI visibility, and reporting efficiency.
- Implemented scalable cloud-based data ecosystems on **AWS and Azure**, integrating SQL and NoSQL databases with ETL pipelines to enable seamless analytics, improve data accuracy, and support enterprise-wide digital transformation initiatives.

### SKILLS

|                                |                                                                                                                                                                                                                                                                                                                                                                                     |
|--------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Methodologies:</b>          | SDLC, Agile, Waterfall                                                                                                                                                                                                                                                                                                                                                              |
| <b>Programming Language:</b>   | Python, SQL, R, DAX                                                                                                                                                                                                                                                                                                                                                                 |
| <b>Packages:</b>               | NumPy, Pandas, Matplotlib, SciPy, Scikit-learn, TensorFlow, Seaborn, ggplot2                                                                                                                                                                                                                                                                                                        |
| <b>Visualization Tools:</b>    | Tableau, Power BI, Advanced Excel (Pivot Tables, VLOOKUP)                                                                                                                                                                                                                                                                                                                           |
| <b>ETL Tools:</b>              | AWS Glue, IBM DataStage, Informatica, PySpark                                                                                                                                                                                                                                                                                                                                       |
| <b>Database:</b>               | MySQL, PostgreSQL, MongoDB, SQL Server, Snowflake                                                                                                                                                                                                                                                                                                                                   |
| <b>Cloud Platform:</b>         | Amazon Web Services (AWS), Microsoft Azure                                                                                                                                                                                                                                                                                                                                          |
| <b>Other Technical Skills:</b> | SSIS, SSRS, Machine Learning Algorithms, Ad hoc Analysis, Statistics, Snowflake, Alteryx, SAS, MS Visio, Hypothesis Testing, Data Mining, Data warehousing, Data transformation, Data Integration, Data Interpretation, Data Pipeline, Association rules, Clustering, Classification, Regression, A/B Testing, Forecasting & Modelling, Data Cleaning, Data Wrangling, GitHub, JIRA |

### EXPERIENCE

#### Cortracker360 | Data Analyst | USA

Aug 2025 – Present

- Led end-to-end analytical initiatives by integrating **operational, customer, and transactional datasets** using **SQL, Python, and AWS Glue**, uncovering trends and inefficiencies that supported executive-level decisions across multiple businesses.
- Performed advanced data extraction, cleaning, and transformation on millions of records using SQL, Python, and AWS Glue, consolidating data from multiple relational databases and external sources to ensure high accuracy.
- Conducted in-depth **Exploratory Data Analysis (EDA)** using Python and **Advanced Excel** (Power Query, Pivot Tables, complex formulas) to identify patterns and anomalies across **100K+** records per analysis, translating findings into actionable insights.
- Designed and maintained analytical datasets and reporting layers optimized for **Power BI** and **Excel-based reporting**, improving query performance and reducing report refresh times by **30%** for stakeholders.
- Built and maintained interactive Power BI dashboards and Excel reports to track **KPIs**, operational metrics, and performance trends, enabling leadership to monitor **20+ key business indicators** in near real time.
- Applied statistical techniques including regression analysis, hypothesis testing, and trend analysis across multiple business use cases, improving decision accuracy and supporting data-backed performance evaluations.
- Collaborated cross-functionally with teams (product, operations, leadership) to define reporting and analytics requirements, delivering weekly and monthly insights through Power BI dashboards and structured Excel reports.
- Automated **70%** of recurring reporting and data validation workflows using Python, SQL, AWS Glue, and Excel-based automation, significantly reducing manual effort and improving reporting reliability.
- Ensured strong data governance and data quality by implementing validation checks, documentation, and controlled access for Power BI reports and datasets, supporting audit readiness and compliance requirements.

#### U.S. Small Business Administration | Data Analyst | USA

Jun 2024 – Aug 2025

- Transformed federal financial and procurement reporting by converting static Excel/PDF workflows into automated SQL-powered data models and Power BI dashboards, increasing reporting efficiency by **40%** and enabling data-driven insights.
- Enhanced federal financial transparency by developing standardized **KPI definitions** and reporting logic across procurement and spending datasets, improving leadership visibility into **budget utilization and performance**.
- Engineered **end-to-end ETL pipelines** using **SQL, Python, and Power Query**, standardizing multi-source integrations and enabling near real-time **KPI tracking** across federal datasets; reduced data latency and strengthened operational performance.
- Streamlined cross-departmental reporting by consolidating fragmented Excel and PDF-based financial records into centralized SQL datasets and Power BI reports, improving data accuracy, and increasing stakeholder trust.
- Conducted advanced statistical analysis including trend modeling, forecasting, and variance analysis to evaluate program effectiveness; produced executive-ready insights that improved strategic decision-making and enhanced federal accountability.
- Enhanced reporting transparency and compliance by designing reusable Power BI dashboards and standardized SQL views for procurement and spending analysis, improved compliance monitoring, and informed budget oversight.
- Developed robust metadata governance through **source-to-target mappings**, data dictionaries, and cross-team validation protocols, improving data integrity, supporting modernization toward cloud-based analytics platforms.
- Automated recurring federal reporting workflows by integrating SQL-driven validations with Python-based scheduling scripts, improving audit readiness and ensuring consistent, deadline-aligned delivery of high-visibility federal reports.

George Mason University | Program Analyst | USA

Sep 2022 – May 2024

- Designed and standardized departmental analytics by developing data models, automation scripts, and reporting templates using Python, SQL, and Excel, consolidating academic and operational datasets to improve KPI tracking and decision-making.
- **Built automated dashboards** that replaced legacy static reporting workflows, increasing operational efficiency by **30%** and reducing manual reporting errors by 15%, while expanding data accessibility for academic and administrative units.
- Extracted and analyzed data from **George Mason University's ERP system**, supporting **financial, enrollment, and operational reporting** while ensuring data consistency and integrity across downstream analytical outputs.
- Supported ERP system reporting and data validation efforts by reconciling source records with analytical datasets, identifying discrepancies, and improving the accuracy of reports used by academic and administrative leadership.
- Developed and maintained documentation and data definitions for key academic and operational metrics, improving **reporting consistency**, easing knowledge transfer, and supporting continuity during staff and system transitions.
- Collaborated with academic, finance, and operations teams to interpret analytical outputs, conduct data quality checks, and support accreditation-related reporting during system transitions, strengthening institutional data reliability.
- Performed **ad hoc analyses** including enrollment trends, budget variance reviews, and student engagement metrics to guide strategic planning and enhance performance evaluation across university departments.
- Automated recurring **ERP-driven reports** through streamlined workflows and standardized reporting processes, reducing manual data pulls, improving report timeliness, and enabling stakeholders to access consistent institutional metrics.

Deloitte | Data Analyst Intern| India

Jan 2021 – Jul 2022

- Spearheaded a financial data modernization initiative analyzing **7.4M+** customer credit profiles, improving model transparency by **33%**, reducing reporting delays, and enhancing overall risk prediction reliability across multinational banking portfolios.
- Engineered ETL workflows using Apache Airflow to orchestrate data integration into **Snowflake**, automating data pipelines, optimizing transformation processes, and reducing manual processing effort by **41%** across reporting environments.
- Developed predictive risk scoring models using TensorFlow with Logistic Regression, analyzing **borrower records**, improving model precision by **18%**, reducing false positives and minimizing exposure across high-risk segments.
- Performed data profiling using Excel Power Query and SQL Server to validate data attributes, performing feature reduction from 210 to 96 fields, and standardizing datasets for forecasting and audit-compliant data modeling.
- Designed KPI dashboards in **Power BI**, visualizing default probability and forecasted exposure; executed A/B Testing of dashboard insights, reducing reporting time from **4 hours to 35 minutes** and strengthening data-driven portfolio optimization.
- Deployed workflows in **Microsoft Azure** for secure fraud detection automation; implemented Risk Management controls using the **Waterfall methodology**, improving detection responsiveness by **27%** and maintaining regulatory audit compliance.
- Translated regulatory and portfolio requirements into analytical specifications, developing audit-ready reports and model documentation that supported enterprise risk governance and regulatory reviews.

MyCollegeKonnnect | Data & QA Analyst Intern | India

May 2020 – Dec 2020

- Analyzed mobile application usage and quality data to identify recurring defects and performance trends, enabling earlier issue detection and helping reduce average release validation time by approximately **10%**.
- Conducted user behavior analysis across application events and interaction logs to uncover usage patterns, translating insights into **data-backed recommendations** that informed feature refinement and improved user experience.
- Created analytical reports and tracking dashboards to monitor team resources, effort allocation, and workload distribution, improving planning visibility and supporting more accurate sprint and release forecasting.
- Validated analytics tracking and event data consistency across application features, ensuring accurate data capture for downstream analysis and reliable reporting of product metrics.
- Reviewed test execution results and defect trends across multiple release cycles to identify high-impact failure areas, supporting more targeted testing efforts and improved release quality.
- Supported **UAT and regression analysis** by validating alignment between user actions and recorded analytics events, reducing rework and contributing to smoother production releases.
- Partnered with product and QA stakeholders to communicate findings, validate post-release fixes, and monitor data quality metrics, enabling informed decision-making and stable product releases.

EDUCATION

Master of Science in Computer Science - George Mason University, Fairfax, USA

Aug 2022 - May 2024

- Relevant Coursework: Data Mining, Database Systems, Machine Learning, Statistics, Data Visualization, Software Engineering, AWS Cloud, Snowflake

CERTIFICATIONS

- Microsoft Certified: Power BI Data Analyst Associate (2025)
- IBM Data Science Professional (2024)
- CompTIA Data+ (2025)
- AWS Certified: Cloud Practitioner (2024)
- Oracle Certified: Data Platform Foundations Associate (2025)
- Oracle Certified: OCI Foundations Associate (2025)
- Scrum Alliance: Certified Scrum Master (2024)
