EDUCATION

Master of Science in **Business Analytics (Data Science)**, **University of Texas at Dallas**.
Bachelor of Technology Electronics and Communication Engineering, **JNTUK**

August 2022- May 2024
July 2016 - September 2020

EXPERIENCE

- Graduate Research Assistant - University of Texas at Dallas****September 2023 – May 2024**
 - Spearheading data analysis initiatives at AV Group Inc., I led the implementation of exploratory techniques, resulting in a remarkable **25%** reduction in hold times and associated costs.
 - Crafting predictive models utilizing **Linear Regression, SVM**, and Random Forest, I attained an exceptional **94%** accuracy rate, showcasing the effectiveness of our data-driven approach.
 - At AV Group Inc., I pioneered data analysis strategies, leveraging exploratory techniques to streamline inventory management, ultimately slashing hold times and costs by **25%**.
- Senior Data Analyst, Auromax Technologies, Hyderabad, India****December 2021– August 2022**
 - Managed the migration of **10** applications to the cloud, handling datasets with over **50 million** records. Used **SQL** and **Python**, speeding up queries by **40%**.
 - Set up **real-time analytics** for **15** data sources, processing over **100 GB** of data daily. Used Python, cutting time-to-insights by 30%.Improved data lake security, analyzing terabytes of data logs and reducing security risks by **25%**.
 - Created a **disaster recovery plan** for a large data warehouse, cutting recovery time by **20%** with **Tableau**.
 - Integrated data from 5 sources, working with petabytes of data using **SQL**, and improving workflows by **15%**. Additionally, implemented **data integration** and enhanced security measures led to further cost reductions, contributing to improved overall operational efficiency and resource utilization.
- Data Analyst****October 2020-December 2021**
 - Led a project analyzing customer behavior for a retail company, handling a dataset with over **500,000** customer records.
 - Cleaned up **huge datasets** of millions of transactions using **SQL** and **Python**, making data **20%** more accurate by removing redundancies.
 - Used Python's **K-means algorithm** to divide customers into **5** groups based on how they shop .
 - Investigated over **2 million** transactions to understand how customers behave, finding important trends and oddities. Made easy-to-understand graphs and charts using Python tools like **Seaborn** and **Plotly** to show customer groups to stakeholders.
 - Shared important insights and suggestions with company leaders, resulting in a **15%** boost in targeted marketing success and a **10%** rise in customer retention rates.

PROJECTS

- Sales Analytics Dashboard Project****January 2023-May 2023**
 - Extracted **sales** data from a database using **SQL**, encompassing product, customer, and transaction details.
 - Utilized **Python** and **Pandas** to **clean**, analyze, and aggregate the data, deriving **key metrics** for sales trends.
 - Developed an interactive sales analytics dashboard in **Tableau**, featuring visualizations like **line charts, bar graphs**, and **geographical maps**.
 - Implemented **filters** and parameters in Tableau, enabling users to dynamically explore and analyze sales data.
 - Extracted actionable insights from the **dashboard**, recommending optimizing **sales strategies** and targeting specific product or customer segments.
- Created a physical database and Mongo database****August 2022-December 2022**
 - Developed a MySQL database model for the **IBM HR Analytics Employee Attrition & Performance dataset**, including employee demographics, job roles, performance ratings, and attrition indicators with a dataset of **1470** entries.
 - Completed data preparation tasks, ensuring data quality and consistency, and successfully **loaded, cleaned**, and transformed data into the **MySQL** database. Managed to insert all **1470** records accurately.
 - Utilized MySQL Workbench to optimize **SQL** queries for data **retrieval, analysis**, and reporting, showcasing proficiency in database design and query execution.
 - Executed queries using Studio 3T to analyze data stored in **MongoDB**, demonstrating competence in working with **NoSQL** databases and MongoDB query language (MQL) for insights into employee attrition and performance.
- Predicting Airplane Delays: A Machine Learning Approach****August 2022- December 2022**
 - Developed and implemented a machine learning model to predict airplane delays based on historical flight data, achieving an accuracy of over **80%**. Utilized **Amazon SageMaker** to train and optimize **XGBoost** models, improving prediction performance through hyperparameter tuning and feature engineering.

SKILLS

- Programming Languages

:

Python, R, SQL
- Visualization Tools

:

Tableau, PowerBI , Microsoft Excel
- Data Management

:

SQL Server, MongoDB, MySQL, Apache Hadoop, Apache Spark.
- Version Control and Project Management

:

Git, Jira, Confluence.
- Data Analytics Tools

:

Google Analytics, MS Office Suite (Excel, Word, PowerPoint), Alteryx, SAS, STATA,R-Studio
- Machine Learning Techniques

:

Supervised and Unsupervised Learning, Natural Language Processing, Regression and Tree Models, Time Series Analysis, Predictive Analytics, Data Modeling, Hypothesis Testing, Forecasting ,ANOVA.
- Analytics

:

PySpark, Numpy, Pandas, SciPy, Matplotlib, Seaborn, SciKit, Plotly, Jupyter.
- I excel in translating user requirements into actionable user stories, and thrive in Agile environments, utilizing methodologies such as Scrum to drive collaborative and efficient project delivery.

CERTIFICATIONS

- I. Google Analytics (GA4), Data Analytics Essentials (Cisco),
- II. Atlassian Agile Project Management Professional Certificate
