---

## SUMMARY

- 2 years of experience as an Android Developer.
- Excellent communication skills, an ability to learn quickly, and a passion for moving fast and building great things.
- Intermediate level knowledge in C++, JAVA, PYTHON, Kotlin, SQL, Android Studio, Solidity.
- Good understanding of OOPs, Data Structures, Mobile Application Development (Android), Machine Learning, Blockchain.
- Good understanding of Information retrieval, software development methodologies as well as remote API connections.

## EDUCATION

---

|                                        |                                      |                      |
|----------------------------------------|--------------------------------------|----------------------|
| University of Texas Arlington          | Master's in Information Systems      | Fall 2021 - Present  |
| Walchand College of Engineering Sangli | Bachelor's in Information Technology | Aug 2017 - July 2021 |

## SKILLS:

|                                 |                                                                           |
|---------------------------------|---------------------------------------------------------------------------|
| Programming Languages           | C, C++, Java, Python, SQL, JSON, PHP, Pearl, Kotlin, JavaScript, Solidity |
| Android & Web                   | Android Studio, Adobe XD, HTML, JavaScript, CSS, Bootstrap                |
| Database                        | MySQL, NoSQL, Firebase, DynamoDB                                          |
| AWS                             | ECS, Lambda, SNS, Alarm, EventBridge                                      |
| ETL Tool                        | Informatica                                                               |
| Analytics & Visualization Tools | SAS Miner, SAS OnDemand, R Studio, Power BI, Tableau                      |
| Project Management Tools        | JIRA                                                                      |
| Migration Tools                 | VS Code, Git-Desktop                                                      |

## CERTIFICATIONS

---

|      |                       |                                       |              |
|------|-----------------------|---------------------------------------|--------------|
| Perl | Python Specialization | Kubernetes – Beginners (Google Cloud) | AWS Services |
|------|-----------------------|---------------------------------------|--------------|

## WORK EXPERIENCE

---

|                                                                                                                                                                                                                                                                                                                                                                                      |                               |                             |

| <ul style="list-style-type: none"><li>• Worked on family-tree application using OOPs concept.</li><li>• Devised all documentation for each app module, detailing all aspects, functions, capabilities and features.</li></ul>                                                                                                                                                        |                               |                             |

- Used JAVA, Kotlin and volley network access JSON APIs, also used PHP and SQL at the back end.
- Got promoted to project Lead from intern after only 3 months of joining.

#### **Freelancer (Android Developer)**

**Janakalyan Academy**

**Jan 2019 – May 2019**

- Using JAVA and Kotlin, Eliminated record-keeping errors through effective management of android application.
- Defined responsibilities, duties and roles of each team member & tested application prior to the final review to verify the efficient issue resolution.
- Integrated third-party UPI - API to facilitate seamless access to external payment system.

#### **LEADERSHIP EXPERIENCE & ORGANIZATION:**

- Participated in HackUTA 2022 hackathon and developed android application with 2 interfaces (Admin and User) using android studio and firebase in 24 hours.
- Lead group for data science project, developed NLP (Natural Language Processing) model to categorize the data based on movie genre category and achieved 71.9% accuracy in 20000 rows (Train) dataset and 4000 rows (Test) dataset.
- Contributed to ArogyaSetu Android Application which is widely used application in India for tracking covid patients.
- Worked on Song - Lyrics generating model using Graph Theory in Python.
- Hosted and organized various department level forums and Competitions in WLUG & PACE organizations.
- Participated and won the Paper Presentation in National level Research Symposium on Computing (RSC 2021).
- Developed CrowdFunding website based on Ethereum network using Solidity language (Metamask wallet)
- Participated in the TECHGIG Code Gladiators 2020 tournament and advanced till semifinal stage.
