Education

Bachelor's in Computer science and engineering

Bharath institute of higher education and research 

2017 - 2021

Chennai, India

Master's in Data Science

Rowan University 

2023 - present

Glassboro, USA

Profile

Enthusiastic Full Stack Developer and aspiring Data Scientist with a B.TECH. in Computer Science and Engineering (2021) and ongoing M.S. in Data Science. Adept at Tata Elxsi for two years, specializing in Angular. Pioneered projects in alcohol detection (IoT), Alzheimer's prediction (Deep Learning) and VAST Challenge MC3(Tableau, python and Deep Learning) Eager to contribute technical expertise and passion for innovation.

Skills

FULL STACK DEVELOPMENT (HTML, CSS, JavaScript, TypeScript, MySql, D3.js, NodeJs, Angular, Swagger, VSCode, C# and python))

MACHINE LEARNING (Tableau, Neural Networks.)

Internet Of Things(IOT)

MICROSOFT OFFICE (Excel, Word, PowerPoint)

Professional Experience

TATA ELXSI

Full Stack Developer 

2021 - 2023

BANGALORE, INDIA

Over two years at Tata Elxsi, I immersed myself in Full Stack Development, honing my skills and expanding my knowledge base. Beyond routine tasks, I actively sought opportunities to delve into emerging technologies and cultivate innovative solutions. This experience has improved my technical proficiency, but it has also helped me develop a mindset that values ongoing education and original problem-solving.

Projects

VAST Challenge MC3

10/2023 - 11/2023

Effectively handled large-scale datasets, utilizing Tableau, D3.js, Graph Neural Networks, and Python to examine complex data relationships and create visually striking representations.

Alcohol Detector in vehicle using IOT

02/2021 - 04/2021

The project aims to prevent vehicle accidents caused by driving under the influence of alcohol. It involves integrating an MQ-3 alcohol sensor with a microcontroller to detect alcohol in human breath. The prototype includes an ignition system that produces spark plugs, activating based on detected blood alcohol content (BAC) to enhance road safety.

Early Prediction of Alzheimer's disease using Deep Learning

08/2019 - 11/2019

Through sophisticated data analysis, this project seeks to develop a reliable system that can recognize Alzheimer's symptoms in their early stages. The research aims to improve patient outcomes and healthcare methods by using Convolutional Neural Network(CNN) algorithm of Deep learning to aid in the early identification and intervention of Alzheimer's disease."

Languages

English • Hindi • Telugu • Tamil

Interests

- I love learning and thrive on acquiring new knowledge
- Playing Badminton, Cricket and Chess
- Watching Movies
- Love To Travel

Declaration

I'm committed to using my knowledge and expertise to promote innovation in the nexus of data science and technology. Eager to work with like-minded experts on projects that have the potential to change the world and promote mutual success.
