Git, GitHub, Linux, Docker (basic), Jenkins (introductory), Postman
- **Methodologies:** Agile/Scrum, CI/CD concepts

WORK EXPERIENCE

Gabriel Service and Repair, *Agile Team Developer*, Regina, Saskatchewan, Canada

March-June 2025

- As an Agile Team Developer, I collaborated with a team of four DePaul University students to deliver a modern, fully functional website for Gabriel Service and Repair, a truck and trailer maintenance business. Over the spring quarter, we followed Agile methodology with weekly sprints, client meetings, and backlog refinement.
- My key responsibilities included improving the site's SEO performance using Ahrefs, optimizing keywords and meta content to boost search rankings. I also developed the inventory page, helping customers explore available parts and services easily. I used tools like GIMP for editing visuals and WordPress for content implementation.
