Full-Stack Software Engineer with 2+ years of experience building scalable full-stack platforms and cloud-native backend systems. Proven track record in optimizing performance, reducing manual workflows, and delivering high-impact tools. Experienced across the entire SDLC, from requirement gathering and analysis to deployment and support. Skilled in developing end-to-end solutions using Python, Java, ReactJS, JavaScript and AWS. Focused on writing clean code and solving real-world problems

TECHNICAL SKILLS

Programming Languages: Python, Java, JavaScript, C#, TypeScript, Kotlin, Golang

Web Development: ReactJS, Node.js, Express.js, Spring Boot, Flask, Bootstrap, SOAP, RESTful APIs, JWT, Auth0, ADFS

Cloud & Databases: AWS (EC2, S3, Elastic Beanstalk, Lambda), Azure, PostgreSQL, MongoDB, MySQL, Cassandra

AI/ ML Frameworks: Prompt Engineering, LLM, TensorFlow, Scikit-learn, OpenCV, GitHub Copilot, Figma AI

Dev Tools & Systems: Jenkins, Internal Dashboards, Shell/Bash Scripting, CI/CD Automation, DevEx Optimization

Methodologies: Agile/SCRUM, CI/CD Pipelines, SDLC, BRD, FRD, OOP/OOD, Design Patterns

WORK EXPERIENCE

Software Development Engineer | Questant Inc.

June 2023 - Present

- Delivered full-stack platform (**ReactJS, NodeJS, PostgreSQL, AWS EC2**) for **Michigan Sugar**, enabling secure, multi-user collaboration across 5 departments
- Engineered and productized **RBAC workflows** with tree-based permission checks and multi-tier approvals, improved operational efficiency by 25%
- Drove secure infrastructure strategy on AWS EC2, **integrating SSL pipelines to achieve 99.99% system uptime** and enforce enterprise-grade encryption standards
- Accelerated backend automation services for client **BlackRock**, replacing manual project milestone with CI-integrated workflows
- Implemented AI-assisted coding tools (**Copilot**) to streamline feature development and reduce implementation errors across backend and frontend workflows
- Incorporated **full SDLC delivery across 3+ projects** by collaborating with stakeholders, defining technical specs, leading sprint cycles, and deploying tested features to production pipelines
- Developed internal APIs & dashboards with platform teams, **reducing support ticket volume by 25%** and improving DevOps response time

Software Development Intern | Incyree

June 2022 - December 2022

- Leveraged **GitHub Copilot** to accelerate feature implementation and reduce coding errors across **Python, ReactJS, and NodeJS** projects
- Created and optimized **backend APIs with ExpressJS and SQL**, ensuring secure and scalable access to caregiver resources for over 500+ concurrent users
- Built and maintained test suites (unit + integration), improving backend reliability, ensuring safe, regression-free deployments
- Executed end-to-end deployments using **GitHub Actions**, reducing release overhead and **increasing deployment frequency by 3x** with minimal manual intervention
- Generated backend queries and execution path, cutting API latency, **reducing response time** for high-load endpoints **over 20%**

EDUCATION

Master of Science in Computer Science | New Jersey Institute of Technology | GPA - 3.6 / 4

September 2021 - May 2023

Bachelor of Engineering in Computer Engineering | University of Mumbai | GPA - 3.8 / 4

August 2017 - June 2021

PROJECTS

AI - Powered Skincare Analyzer and Recommendation System

- Developed a cloud-native face scanning web app using **Python + OpenCV + Flask**, detecting 5+ skin issues with 85% accuracy; deployed to support multi-user concurrent access with **<5s response time**
- Implemented ML pipelines for image preprocessing, feature extraction, and inference, ensuring modular, maintainable, extensible code
- Integrated responsible AI practices, including privacy-preserving image handling, secure data storage, and bias evaluation Designed prompt-driven recommendation engine for personalized skincare guidance, demonstrating early LLM/AI integration concepts.

Smart Task Manager Web app (MERN Stack, JWT, Docker, Kubernetes)

- Orchestrated full-stack **real-time task synchronization system**. Implemented secure session management via JWT authentication
- Utilized **modular REST APIs** adhering to **SOLID principles**, enabling scalable for multi-tier user roles (Admin, Manager, User)
- Used **Figma AI** and **MidJourney** for rapid design mockups and component generation, reducing design iteration time by 30%

Fake Tweet Detection using Machine Learning Algorithm

- Constructed a machine learning pipeline using real-time **Twitter API data**, achieving over 94% tweet classification accuracy
- Programmed web app with **JavaScript** and REST APIs, boosting load speed by 40% and streamlining tweet verification

CI/CD Automation Dashboard

- Built and deployed backend microservices using **C# (.NET)** for secure transaction workflows
- Orchestrated containerized deployments with **Docker & Kubernetes**, integrated with Jenkins CI/CD pipelines to track build and deployment health, reducing manual QA cycles by 40%
