

Janhvi Ratrey

UI/UX Designer | Product Thinking

Indianapolis, IN (open to relocate) | iratrey@iu.edu | 317-289-3330 | www.janhviratrey.com | www.linkedin.com/in/janhviratrey

SUMMARY

UI/UX Designer with a research-driven, product-focused approach and 3 years of experience designing scalable, user-centered digital products across B2C and SaaS platforms in e-commerce, nonprofit, fintech, and logistics domains. With a background in Computer Science Engineering and a Master's in Human-Computer Interaction, I bring together technical fluency, behavioral research, and systems thinking to craft accessible, data-informed, and stakeholder-aligned experiences. I specialize in designing intuitive user flows, prototypes, and mockups rooted in research, storytelling, and iterative design processes, creating visually compelling and emotionally resonant experiences that meet user needs, enhance engagement, and drive measurable business value.

EDUCATION

Master of Science in Human-Computer Interaction (GPA: 4.0)

08/2023 – 05/2025

Indiana University, Indianapolis, IN

Coursework focused on UX research, interaction design, accessibility, behavioral psychology, prototyping, design systems, data visualization, and storytelling. Applied these skills through projects such as an AI-powered mobile-responsive app for personalized meal planning and diabetes prevention; experience-driven platform enhancing emotional connection in long-distance bonds through asynchronous interaction; and a wearable designed for first responders with real-time health tracking and haptic communication to improve safety in high-risk environments.

Bachelor of Technology in Computer Science and Engineering

08/2017 – 05/2021

Chhattisgarh Swami Vivekananda Technical University, India

Focused on Java, Python, JavaScript, Spring Boot, HTML/CSS, and foundational AI/ML concepts for data analysis. Built full-stack platforms including a MERN-based e-commerce site with Stripe/PayPal integration, and admin dashboards, and a microservices-based airline ticketing system using Spring Boot, JPA, Eureka, and Feign Client to enable scalable API interactions.

EXPERIENCE

UX/UI Designer, Strategist & Researcher (Team Lead) – Capstone Project

08/2024 – Present

Toyota Mobility Foundation | Indianapolis, IN

Toyota Mobility Foundation, known for advancing sustainable mobility and logistics, partnered with Indiana University to optimize operations at the IMPACT Center, a food pantry supporting 400+ families monthly.

- Led **4 stakeholder workshops** and directed collaborative research using **5+ qualitative and quantitative research methods**, including **contextual inquiry, surveys, literature reviews and user interviews**, to uncover inefficiencies and define the problem space, project scope, and UX success metrics.
- **Drove cross-functional alignment** with engineers, Toyota Production System experts, and internal teams to shape user-centered strategies grounded in operational workflows, ensuring solutions were accessible, scalable and feasible within the pantry's resource-constrained environment.
- Mapped **user journeys, designed wireframes, task flows, and mid-fidelity and high-fidelity prototypes** to co-design a **role-based inventory and volunteer management system** for kiosks and tablets. Proposed a **pantry reorganization** using color-coded categories, and introduced a scalable design system in Figma, complete with a unified style guide and reusable components, to ensure UI consistency and minimize design debt.
- Delivered **annotated mockups** and **scenario-based storyboards** to articulate design rationale, and **led stakeholder concept validation testing** that improved item **searchability** and **operational efficiency by over 70%**.
- Currently leading **usability testing** using 3+ evaluation methods, including **think-aloud protocols** and **SUS evaluations**, with 25+ diverse users to refine interaction patterns, validate accessibility, and improve system learnability across roles.

UX Designer and Content Strategist

Harvest House Ministries | Indianapolis, IN

06/2024 – Present

A Buffalo, NY-based non-profit supporting underserved communities through education, healthcare, and resources, serving over 25,000 people annually. Facilitated via Catchafire, a platform that connects organizations with design professionals.

- Conducted a **UX audit** and **heuristic evaluation**, identifying **14 critical usability issues** across navigation and donor flows. Delivered **10 prioritized recommendations** that improved content discoverability, reduced bounce rates, and boosted user engagement, providing an estimated **\$6,762 in equivalent service value** to the organization.
- Led **content strategy** to align written and visual elements with the organization's **mission, voice, and values**, applying **storytelling techniques** to refine messaging, CTA placement, and page structure. Enhanced clarity and **emotional resonance** across key user touchpoints, especially donation flows, and contributed to increased donor engagement and inquiries.
- Collaborated with stakeholders and a design partner to evaluate **content effectiveness**, gather feedback, and restructure site messaging resulting in a **35% improvement in content clarity** and a more **mission-aligned user experience** across key pages.

UI/UX Designer and Researcher

08/2022 – 02/2023

Freelance | Raipur, India

Designed a web widget to help small local businesses in tier-3 cities increase digital visibility, strengthen community engagement, and build trust with buyers. Focused on addressing challenges in discoverability, platform fatigue, and personalized product recommendations for underserved sellers.

- Conducted user interviews and contextual research with 20+ shop owners and home-based entrepreneurs to uncover pain points in discoverability, digital literacy, and customer trust, insights that informed a tailored commerce solution.
- Designed and tested user flows and mid-fidelity prototypes in Figma, incorporating strategic product recommendations that 60% of surveyed users identified as key to improving trust and engagement.
- Validated a proof-of-concept widget through usability testing with 15+ participants, optimizing layout, navigation, and accessibility for low-tech users while integrating verified seller tags and buyer intent signals.

Systems Engineer

07/2021 – 02/2022

Tata Consultancy Services Ltd. | Bangalore, India

Promoted from Associate Systems Engineer to Systems Engineer while working on high-impact supply chain and ERP solutions for Aditya Birla Fashion and Retail, a major B2C client.

- Configured and implemented SAP Materials Management (MM) modules to streamline procurement and inventory workflows, reducing turnaround time by 40% and ensuring compliance across development, quality, and production servers.
- Collaborated with cross-functional teams to resolve complex system issues, optimize ERP logic, and lead testing and ongoing support, resulting in faster issue turnaround, stronger process alignment, and improved user satisfaction across enterprise supply chain.

SKILLS

Research & Evaluation: User Research, Surveys, User Interviews, Think-Aloud Testing, SUS, Usability Testing, Contextual Inquiry, Heuristic Evaluation, Affinity Mapping, Persona Development, Behavioral Analysis, Data Visualization, Research Tools: Lookback, Maze, Google Forms, Miro

Design & Strategy: Interaction Design, Storyboarding, Wireframing, Prototyping, A/B Testing, Responsive Design, Cross-Platform Design, Information Architecture, UX Strategy, Accessibility (WCAG), Data-Driven Design, Journey Mapping, UX Writing

Tools & Technologies: Figma, Miro, Lucidchart, Axure, Framer, Adobe XD, Illustrator, Visio, Python, Tableau, HTML/CSS, JavaScript, Git, SAP MM, Google Analytics

Systems & Collaboration: Design Systems, Component Libraries, Cross-Functional Collaboration, Agile Methodologies, Workshop Facilitation, Storytelling, Visual Communication, Product Thinking
