Software Engineer

Software Engineer with secret clearance and more than 4 years of experience. Proficient in Kotlin, JavaScript, and TypeScript, as well as Agile scrum methodologies, version control systems, and software development lifecycle. Proven success in enhancing security, code quality/performance through code reviews, unit testing, and CI/CD. Eager to collaborate with cross-functional teams for high-quality software solutions.

TECHNICAL SKILLS

Programming Languages: Kotlin, Python, TypeScript, JavaScript

Libraries/Frameworks: Android Native, React Native, React.js, Django, ELK Stack/Elastic Stack

Development Tools & CI/CD: Gradle, Android Studio, SDKs, VS Code, Jenkins, GitHub, Bitbucket, Git, Docker

Project Management: Jira, Trello

UI/UX Design: Figma, Jetpack Compose, Coil

Architecture & Design Patterns: MVC, MVVM, Dagger, Hilt

Asynchronous Programming: Coroutines, RxJava

Cloud & Backend Services: Firebase, Sanity.io, MongoDB, PostgreSQL, Room, GraphQL, REST API, JSON

PROFESSIONAL EXPERIENCE

Software Developer, Agile Defense, Sierra Vista, AZ

Nov 2024 – Present

Stack: Varied

- Engineered and maintained a robust data ingestion pipeline using the ELK Stack (Elasticsearch, Logstash, Kibana) within Docker containers to parse, filter, and visualize real-time data from diverse sources, including XML, JSON, and CSV files.
- Instrumented JavaScript and Java test applications with Open Telemetry (OTel) and Elastic Beats (Metricbeat, Packetbeat) to monitor performance, collecting and analyzing traces, logs, and metrics via custom Kibana dashboards.
- Developed containerized test applications and orchestrated multi-node, cross-cluster replication environments to ensure data integrity and high availability, demonstrating a strong understanding of distributed systems and backend communication.
- Proactively researched the Android Tactical Assault Kit (ATAK) and explored advanced technologies, including Retrieval-Augmented Generation (RAG) and machine learning algorithms (Scikit-learn, Pandas), for predictive data analysis and enhanced search capabilities.

Software Engineer, TechJoy Software, Remote

Oct 2023 – Oct 2024

Stack: React Native

- Integrated a Native Drawer library, increasing app connectivity and user interaction for hundreds of users resulting in an increase of users of up to 20%.
- Developed dynamic configuration screen for memory game, allowing customization and enhancing user engagement by 30%.
- Designed, built, and implemented a "Contact Us" screen, efficiently handling backend endpoint form submissions, improving user inquiry response time by 40%.

Android Engineer, E*Trade, Remote

Jan 2022 – Aug 2023

Stack: Android Development

- Modernized asynchronous programming by updating coding of current RxJava threading to Coroutines in several features, boosting app performance by 27%.
- Engaged in diagnostic troubleshooting and debugging software to fix a critical bug that affected sorting mechanism in portfolio and watchlist views, restoring user trust to over 10,000 users.
- Adapted an open-source pie chart library to create a donut chart user interface, requiring translation of Java to Kotlin, allowing users to view top stocks in an easy to view format which led to 25% increased user interaction.
- Implemented Dagger 2 for dependency injection, reducing boilerplate code by 30% and improving app modularity and testing efficiency by 20%.

EDUCATION

Software Engineering Certificate, Kenzie Academy

2021
