Summary — Data Scientist with 3+ years of experience delivering risk-driven analytics and predictive modeling for large-scale operational systems. Proven expertise in Python, SQL, time-series validation, and anomaly detection to support reliability, asset performance, and operational decision-making. Experienced in translating complex analytical outputs into actionable insights for cross-functional engineering and operations teams.

Skills

- **Languages:** Python, SQL, R, Java, C
- **Databases:** Snowflake, Oracle, SQL Server, MySQL
- **Data Engineering:** Production-grade ETL pipelines, data transformation routines, workflow automation
- **EUC Conversion:** Excel, Access, VBA macro reverse-engineering and modernization
- **Data Modeling:** Analytical modeling, semantic layers, trusted datasets for reporting
- **Cloud Platforms:** Snowflake, AWS, Azure
- **Testing & Validation:** Automated data validation, regression testing, data integrity checks, CI/CD workflows.
- **Geospatial & Spatial Analytics (Foundational):** Spatial data analysis concepts, GIS-aware analytics using Python visualization tools
- **Governance & Version Control:** Git, GitHub workflows, code reviews, documentation
- **Compliance:** HIPAA, CMS standards, PHI/PII handling, state/federal healthcare data policies
- **Visualization & Reporting:** Power BI, Tableau
- **Tools:** Airflow, SSIS, REST APIs, Linux, Windows

Experience

CVS Health (Supply Chain Analytics)

Aug 2025 – Present

Data Scientist

- Supported migration of enterprise operational data from Oracle to Snowflake by redesigning complex SQL transformations, validating schema mappings, and performing source-to-target reconciliation to ensure data accuracy.
- Designed and executed automated data validation frameworks in Python, including assertion-based checks, unit-style tests, and schema enforcement, to verify data integrity across Oracle, Databricks, and Snowflake pipelines.
- Developed time-series-based validation and monitoring logic using rolling-window statistics, trend analysis, distribution comparisons, and threshold-based alerts to detect anomalies, data drift, and unexpected behavior in weekly outputs.
- Conducted statistical performance analysis of predictive models at SKU- and location-level granularity, including error distribution analysis, variance comparisons, and stability checks to ensure consistent and reliable operational forecasts.
- Evaluated operational risk models using prediction-direction analysis (over- vs. under-forecasting) to assess reliability impacts and prioritize high-risk inventory conditions, achieving approximately 70–75% directional accuracy.
- Documented analytical findings, validation results, and data quality issues with clear metrics and summaries to support continuous improvement, operational transparency, and effective communication with cross-functional stakeholders.

Center for Teaching and Learning, University of New Mexico

Jan 2024 – Dec 2024

Student Data Analyst

- Analyzed 100,000+ student records to uncover performance trends and guide targeted academic interventions.
- Built dashboards in Power BI and Tableau to improve academic tracking for faculty and administrators by 20%.
- Supported predictive modeling in Python to identify at-risk students, improving intervention targeting by 25%.
- Cleaned and transformed structured/unstructured data using SQL and R to ensure accurate reporting and insights.
- Collaborated with academic staff to gather requirements and deliver automated dashboards aligned with goals.

Accenture Solutions Pvt. Ltd.

Aug 2021 – June 2023

Data Engineer

- Designed, developed, and supported production-grade ETL/ELT data pipelines using Python and SQL to ingest, transform, and validate structured business data.
- Converted legacy Excel and Access-based workflows into scalable Python- and SQL-based pipelines, improving data reliability, performance, and maintainability.
- Designed modular SQL transformation layers and staging schemas using CTEs, window functions, and incremental logic to enable performant analytical queries and consistent downstream BI reporting.
- Implemented comprehensive data quality checks within pipelines, including schema validation, null and range checks, record count reconciliation, and source-to-target comparisons to ensure data accuracy and consistency.
- Supported pipeline orchestration and scheduling using Airflow-style patterns, defining task dependencies, retries, and failure handling to ensure reliable batch data processing.
- Integrated CI/CD practices into data pipelines using GitHub Actions to automate testing, validation, and deployment.
- Collaborated with cross-functional teams to gather data requirements, troubleshoot pipeline issues, and deliver reliable data products.

Education

Masters in Computer Engineering

Aug 2023-May 2025

University of New Mexico, Albuquerque, NM

Bachelors in Electronics and Computer Engineering

Aug 2017-June 2021

JNTU Hyderabad, India
