EDUCATION

Rutgers University, Newark, NJ

September 2020 - May 2024

Bachelors in Computer Science, Minor in Mathematics | GPA: 3.7

Honors: *Cum Laude*

- **Relevant Courses:** Software Engineering, Cloud Computing, Advance Data Structures and Algorithm, Intensive Programming in Linux, Operating Systems, Linear Algebra, Discrete Structures, Numerical Analysis, Physics
- **Achievements:** Adobe Student Ambassador, Girls Who Code- *Vice President*, Computer Science Developers club – *Member*
- **Certifications:** [CodePath](#) Android App Development (September 2023 – November 2023)

TECHNICAL SKILLS

- **Programming Languages:** Python, HTML, C, C++, Java, SQL, JavaScript, React, PHP, Kotlin, Typescript
- **Developer tools:** Visual Studio Code, Slack, ServiceNow, Jira, SharePoint, Android Studio, SQL DB, Mongo DB, Rhinoceros 3D, Figma
- **Technologies/Frameworks:** Linux/Unix, React, Git, GitHub, Adobe Software, Google Collab, Amazon Web Service (AWS), Spark, RESTful APIs, jQuery, Bootstrap, WordPress

WORK EXPERIENCE

Information Technology Consultant

March 2023 – Present

Rutgers University

Newark, NJ

- Resolved diverse technical issues for users, including troubleshooting VPN connectivity and phone challenges, and providing in-person assistance; reduced customer support issues by 40% and improved overall user satisfaction.
- Facilitated over 400 students and faculty members, equipping them with technical expertise to troubleshoot and overcome diverse IT challenges, fostering a culture of self-reliance and efficiency.
- Documented incidents and resolutions on ServiceNow, streamlined support process, and a minimized new ticket creation. Installed critical system updates for over 250 workstations, ensuring optimal performance and security.

Front End Developer

October 2023 - May 2024

Rutgers School of Health Profession

Newark, NJ

- Coordinated a multifaceted research initiative investigating frailty progression and fall risk in older adults; executed data collection and analysis, identifying key risk factors and developing tailored intervention programs that reduced fall-related hospitalizations by 15% annually.
- Developed a Python-based application to analyze sensor data for modeling and assessing physiological indicators in elderly populations, resulting in a 40% improvement in accuracy and precision of measurements.
- Trained a predictive model using data and graphs to identify the risk of falling in elderly populations, enhancing the early detection and prevention strategies.

PROJECTS

EZ Recipe App

Kotlin and Android

- Led the development of the EZ Recipe App in collaboration with a team, utilizing Android and Kotlin to create a culinary platform, and integrated Tasty API(RESTful) to curate a robust database featuring over 1,000 recipes.
- Designed a user-centric interface with interactive search capabilities, aimed to foster an average engagement frequency of 3 sessions per week and over 80% positive user feedback.
- Improved the app's accessibility and user satisfaction while continuously refining features based on user input with an anticipated goal of achieving more users.

Shopping Website

PHP and SQL database

- Developed “Khushi’s anime boutique,” a shopping website, with an integrated MySQL database system and deployed through web host, aiming to gather over 500 product reviews within the first six months of launch.
- Boosted product reviews by 30% and user satisfaction 20% by implementing an innovative and user-friendly interface using HTML, CSS, and PHP.
- Advanced user engagement by implementing an automated order confirmation system. Delivered personalized emails to users, leading to a 25% increase in customer satisfaction and a 15% rise in repeat purchases.
