PROJECT WORK

- Blog-Application APIS—The Blog Application APIs project is a web application that provides a backend API for a blog platform. The application allows users to create, read, update, and delete blog posts and manage categories and comments on those posts. The API is built using the spring boot framework, with a SQL database for storage. The application follows RESTful principles, with endpoints for each CRUD operation on both blog posts, categories, and comments. The application is secured using Spring Security, which provides authentication and authorization features. Using validation in this project Users can register and login to the application to create, update, and delete their blog posts is created and then send Emails to users. and follow spring MVC.
- Education Portal — An education portal using Java JSP and JDBC is a web-based platform that aims to provide educational resources and services to users The education portal will allow users to create accounts, log in, and manage their profiles. This will be implemented using Java Servlets and JSP pages, which will interact with a MySQL database using JDBC.

- Audit Confirmation Service - Audit-Confirmation-API is a service which is used to verify all parties' information including applicable business licenses, addresses, etc. to ensure that the companies are legitimate places of work and that they have authorization to request such information from SVB. This API is used by auditors via Capital Confirmation Inc. The auditor first registers with Capital Confirmation Inc and enters SVBs account number for verification.
- EIS -Microservices - I was work On EIS-Microservices and fixed the vulnerabilities in many services and updated the jdk version 11 to 17.
- Credit-Card-Service - I was working on Credit Card Service, and I created an AWS Lambda and checked with localstack using Typescript to fetch the account number from the database and convert it to encrypted form because this data is safe.
