

Devanshi Desai

551-263-2198 | desaidevanshi218@gmail.com | [Github](#)

Summary

An agile detail-oriented data professional with specialization in business intelligence, big data analytics, machine learning and hands-on experienced in data migration, wrangling, transformation, warehousing, and governance.

Technical Skills

Language: MS SQL, NoSQL, PL/SQL, Spark SQL, Postgres SQL, Hive SQL, Python, R, Java, Scala, SAS

Python Libraries/ Frameworks: NumPy, Pandas, PySpark, Seaborn, XGBoost, Scikit-learn, Beam, SciPy, TensorFlow, Matplotlib

Analytics: Databricks, AWS Redshift, Big Query, Spark, Hadoop, Hive, Oracle, Alteryx, Snowflake, Tableau, Power BI, Metabase, Sisense, Terradata, Azure Synapse Analytics, Athena, SSIS, Looker, SAS Analytics, Informatica, Talend

Orchestration: Airflow, Docker, AWS Kinesis, Azure Data Factory, Kafka, Kubernetes, Jenkins, AWS Step Functions, Lambda

Storage: AWS S3, Blob Storage, HDFS, HBase, Parquet, Cassandra, GCP Cloud storage, Azure Data Lake

Work Experience

Data Engineer - REPAY- Real time Electronic Payments – Buckhead, Atlanta

Oct 2022- Present

- Key contributor in building REPAY's data warehouse from scratch in AWS to ingest, transform parquets and load 13 distinct acquisition data from their respective legacy platforms to S3 buckets and Redshift
- Imposed strict validation rules for data using Python's data validation libraries such as Pydeeque and GreatExpectations
- Monitored Jenkins CI/CD and ML pipelines' DAG runs for successful data orchestration and transformation in Airflow and Databricks
- Developed REPAY Insight Center (RIC) and REPAY Vault (REV) an internal enterprise-level data file catalog and vault
- Configuring yaml notebook for Implementing enterprise level User, Groups, and Access policies, mapped end-to-end lineage, and empowered data owners to govern their data entities using Tags, Glossary Terms, and Domains in Datahub
- Leverage Power BI's filtering and slicing capabilities to analyze and govern data from distinct portfolios based on tags from Datahub
- Consolidated financial data from varied data streams and sources in Tableau and Sisense for budgeting, forecasting, monitoring key financial metrics and updating dynamically using LOD expressions, tracking expenses, and visualizing financial performance trends

Analytical Consultant - Wells Fargo – New York, New York

Mar 2022 - Oct 2022

- Built CI/CD pipeline for vendor data stream in Azure Data Factory to incorporate streaming and batch data, perform JUnit and SonarCube tests to produce JAR, WAR files, checks and validations for quality, monitor containers' orchestration in Kubernetes and Elastic search and then migrating from Azure Data Lake to Azure Synapse for advance analytics
- Utilized SAS tools such as SAS Enterprise Guide and SAS Studio to identify patterns, trends, and anomalies that require remediation
- Automated data transfer and analysis processes between SAS Studio and Excel using SAS jobs to trigger import, process, and analyze
- Perform advanced analytics and statistical modeling on data stored in Teradata, crafted SAS procedures and functions
- Coordinate with business analysts and end-users to conduct UAT, track issues, and obtain acceptance sign-off

Software Engineer - Ford Motors – New York, New York

Jun 2021 - Mar 2022

- Developed 40 test queries for validating 45+ sales performance Tableau reports to ensure alignment with Alteryx workflow
- Automated data preparation and output to Tableau through Alteryx Server for regular updates and consistency
- Monitored Pub/Sub for streaming APIs, and modeled a Data Flow to receive sales data in Big Query and visualize in Tableau
- Implemented robust error handling mechanism in Scala, enhancing fault tolerance and ensuring the reliability of Data Flow pipeline
- Successfully integrated Cloud SQL with a third-party EFT network to enable secure and efficient processing of financial transactions within a mission-critical application, utilized Django framework for CRUD operations on transactional data stored in Cloud SQL

Data Analyst – Jetzy – New York, New York

May 2020 - Sep 2020

- Architected a data pipeline leveraging Google Cloud Composer to seamlessly integrate and automate lead generation process
- Utilized Cloud Dataflow for efficient data processing, Cloud Storage for scalable data storage, and Big Query for in-depth analytics, resulting in a notable 30% increase in generated leads and Developed and monitored customer lifecycle KPIs(engagement, conversion)
- Led meetings with vendors, evaluated, tested their tools, performed cost negotiations to reduce cost up to 15%

Academic Experience

Capstone Project - Greek from Greece – New York, New York

Jan 2021 - Jun 2021

- Orchestrated ETL pipelines utilizing Airflow and python to seamlessly ingest product catalogs, store comprehensive details, consumer data and daily sales transactions from retail partners into S3, implementing data catalog and governance in Glue
- Provided data Insights and market intelligence through AWSAPI Gateway and AWS Lambda functions
- Designed custom Power BI dashboard to provide insights, analytical solutions to optimize the marketing campaign

Stock Price Analytics and Correlation Viewer

Nov 2020 - Jan 2020

- Developed a Python application to analyze the stock prices based on historical prices for (~8800) US Equities tickers
- Trained LSTM, Linear Regression and K-Nearest Neighbor models on historical data downloaded daily in a cron job
- Analyzed ETF's having high positive/negative correlations

Education

Stevens Institute of Technology, Hoboken, New Jersey

May 2021

Master of Science Information System (conc. Data Analytics and Machine Learning)

Gujarat Technological University, India

May 2019

Bachelor of Computer Engineering
