Profile

Software engineer with 2+ years of experience building, supporting, and improving enterprise web applications and services. Worked end-to-end across development, testing, and release support, with regular production debugging and defect triage. Comfortable with CI/CD automation, performance tuning, and database optimization to keep systems stable and scalable. Collaborated with QA, analysts, and cross-functional teams, focused on reliable delivery and better user experience.

EXPERIENCE

Software Engineer, TCS

01/2022 – 07/2023 | Hyderabad, India

- Supported enterprise applications used by 10,000+ users; partnered with Business Analysts (BA) and QA to convert requirements into sprint tasks, deliver fixes, and complete System Integration Testing (SIT) / User Acceptance Testing (UAT) sign-off without breaking existing flows.
- Designed and delivered full-stack enhancements for workflows across 15+ business units; reduced rework by showing early demos, collecting feedback, and adjusting quickly before release.
- Built and maintained REST APIs in Java/Spring Boot (controllers/services, validation, exceptions, logging); kept API contracts consistent across UI and downstream services, lowering reopened defects.
- Improved PostgreSQL/MySQL performance by 25% and reduced long-running query time by ~30 minutes by analyzing query plans, fixing join patterns, adding indexes, and tuning report/transaction queries.
- Reduced UI defects by 30% by creating reusable components, improving form validations, and verifying behavior using Chrome DevTools across common browsers.
- Handled SIT/UAT defect triage and production support; improved troubleshooting efficiency by 35% using log analysis and HTTP tracing (Postman/DevTools), then documenting root cause analysis (RCA) and regression steps for QA validation.
- Strengthened CI/CD with Jenkins and Git/GitHub, cutting deployment time by 40%; automated build and unit checks, cleaned environment configs, and maintained release notes/checklists for smoother deployments.

SKILLS

Programming & Scripting Languages—Java, Python, C, PL/SQL, JavaScript, HTML5, CSS3

Frontend Development—React.js, JavaScript, HTML5, CSS3, Responsive Design, Mobile-First Development

Backend Development—Node.js, Spring Boot, Python, PHP, RESTful APIs.

Database Technologies—MySQL, PostgreSQL, Database Optimization, Query Performance Tuning, Schema Design, Data Modeling

Cloud & DevOps—Jenkins, GitHub Actions, CI/CD Pipelines, Infrastructure as Code

Development Tools—Git, Visual Studio Code, Chrome DevTools

Testing Frameworks—Selenium, JUnit, React Testing Library, Test-Driven Development

Methods—Agile/Scrum, SDLC, code reviews, documentation

PROJECTS

Image Retrieval System

- Built an image retrieval system leveraging the CIFAR-10 dataset, utilizing a ResNet50 CNN for feature extraction and Nearest Neighbors for similarity matching. Carried out data preprocessing and result visualization in Python with TensorFlow, scikit-learn, and Matplotlib, successfully retrieving visually similar images.

Academic Networking Site Development Plan

- Planned and documented an academic networking platform to support collaboration, mentorship, and career growth, defining core features (profiles, messaging, job boards, events calendar, and career resources) and outlining team roles across project management, frontend/backend development, UI/UX, and QA.

EDUCATION

The University of Texas at Arlington,
Master of Science in Computer Science

08/2023 – 05/2025 | Arlington, Texas
