

Omkar Karbhari Hadawale

(301) 363-1876 | omkarhadawale67@gmail.com

Full Stack .Net Developer

PROFESSIONAL SUMMARY

- 4 years of experience, as a Full Stack .Net Developer, hands-on in both **front-end and back-end** development, adept at delivering end-to-end solutions.
- Proficient in **.NET (4.0/4.5) and ASP.NET MVC 5**, with a deep understanding of both front-end (**HTML5, CSS3, Angular**) and back-end (**C#, VB.NET, ADO.Net**) development.
- Experienced in working with diverse databases, including **MySQL, Oracle, SQL, and MongoDB**, ensuring efficient data operations.
- Proficient in deploying applications on **AWS and Microsoft Azure**, embracing containerization with Docker.
- Expertise in building and optimizing **RESTful APIs using ASP.Net Core 3.1 and Python**.

SKILLS

Web Technologies:	NET 4.0/4.5, ASP.NET MVC 5, AJAX, HTML5, JSP, JavaScript, CSS3, XML, XSD, AJAX, Angular, ASP.Net Core 3.0, 3.1, 6.0, Restful API
Methodology:	SDLC, Waterfall, Agile
Languages:	Java, Python, C#, VB.NET, DHTML, CSS, ADO.Net, ASP.NET, LINQ
Other Frameworks:	Web Services, AJAX, MVC 5, Microservices, J-Query.
IDEs:	NetBeans, IntelliJ IDEA, Eclipse
Cloud & Deployment:	AWS, Microsoft Azure, Docker
Databases:	MYSQL, Oracle, SQL Server 2016/2017, PL/SQL, MongoDB
Tools:	Microsoft Visual Studio, VSS (Visual Source Safe), DevX Tools, VSTS, Team Foundation Server, Microsoft Stream Insight, Squirrel
Testing tools:	JMeter, Junit, NUnit, MSTest
Reporting tools:	Crystal Reports, SQL Server 2017, SQL Server Reporting Services, SSIS, SQL Server Analytical Services.
Version Control/Tracking Tools:	GitHub, SVN, P4V, Bitbucket, Jira, Team Foundation Server (TFS)
Operating Systems:	Windows, LINUX, Mac iOS.

EDUCATION

Master of Science in Computer Science | New Jersey Institute of Technology, NJ, USA

Bachelor of Technology in Electronics and Telecommunication Engineering | Savitribai Phule Pune University, India

WORK EXPERIENCE

Northern Trust – Full Stack Dot Net Developer, NJ

June 2023 – Current

- Led the design and development of a responsive client-facing web application using ASP.NET MVC, enhancing the user experience for online wealth management services.
- Used JavaScript to create Client-Side Dynamic content UI and ASP.NET and C .NET to modify and Add Server Controls for Dynamic Server-Side Code.
- Integrated Transport Layer Security (TLS) protocols to ensure secure communication, mitigating potential data breaches and enhancing overall system security.
- Utilized client-side optimizations with Angular for seamless page loading, resulting in a 20% improvement in application responsiveness and user satisfaction.
- Implemented token-based authentication for RESTful APIs using JSON Web Tokens (JWT), enhancing API security and providing a seamless authentication experience for clients.
- Implemented load balancing strategies and scaling mechanisms using Azure Application Gateway, ensuring seamless performance during periods of high web traffic.

- Developed features in Agile SDLC (Jira, CI/CD) understanding individual user stories and acceptance criteria. Used JFrog Artifactory for package sourcing and publishing, Git& GitHub for version control.
 - Designed a microservices architecture base application for managing Medical IoT devices using ASP.NET (MVC), Angular, Entity framework, DOTNET Core in C#. 30% improvement in system performance and 20% reduction in response times.
 - Implemented key microservice endpoints (RESTful Services-API), including data Import-Export, User Tenancy, Security service and Auditing service (SQL, POSTGRESQL, RabbitMQ). Achieved 25% enhancement in real-time data transactions.
 - Deployed microservices on Docker containers enhancing scalability by 15%. Written Unit, Component, and Interface automated test cases, TSQL for database testing. Dependency Injection and Design patterns (Abstract factory, Singleton).
 - Ensured interoperability with Python frameworks such as Flask or Django, enabling seamless communication between ASP.NET and Python components.
 - Implemented an Auditing Service web service for tracking and auditing critical actions, ensuring traceability and compliance with security and regulatory requirements.
 - Implemented unit tests using NUnit to ensure the reliability and correctness of individual units of code within the ASP.NET application.
 - Employed LINQ (Language Integrated Query) in C# for expressive and efficient data querying, enhancing readability and simplifying data manipulation tasks.
-
