LinkedIn: [Manideepika B](#)

PROFESSIONAL SUMMARY:

- 5+ years of experience in IT experience in Analysis, Design, Development, Implementation, and Testing in JAVA/J2EE technologies. Worked in Agile/SCRUM and Waterfall development methodologies.
- Proficient in Core Java - OOPS, Exception handling, Multi-Threading, Generics, and Collections.
- Expert in the development of various web, and enterprise applications using Java/J2EE technologies such as Struts, Spring, and Hibernate with Java 1.8 features like Stream API, Lambda expressions and Filters, etc.
- Experienced in UI frameworks - HTML5, DHTML, CSS3, JSP, AngularJS, Angular 4/6/7/8/9, NodeJS, jQuery, JavaScript, Bootstrap, Ajax, TypeScript, ReactJS, BackboneJS, ExpressJS.
- Experience in Spring modules such as Spring MVC, IOC, AOP, JDBC, JTA, IO, Spring Boot, Spring Microservices, Spring REST, Spring Eureka, Consul, Swagger UI, and Spring Zuul.
- Used Java/J2EE patterns Front Controller, Session, Facade, DOM, Factory Method, and Singleton.
- Worked on Microservices patterns - Circuit Breaker/Hystrix, DDD, Aggregator, Proxy Chaining.
- Developed Spark code using Scala and Spark-SQL/Streaming for faster testing and processing of data.
- Experience in Spring Boot - Microservices, Pivotal Cloud Foundry (PCF), Engaged with Spring Boot.
- Proficient in using Amazon Web Services(AWS). Extensive experience focusing on services like EC2, VPC, Cloud Watch, Cloud Front, Cloud Formation, IAM, S3, Amazon RDS, ElastiCache, SNS, and SQS.
- Experience with application build tools like ANT, Maven, Docker, and Gradle, and logging tools like Log4J.
- Developed applications using MEAN/MERN (Mongo, Express, Angular/React, Node) technologies.
- Working on Azure for highly available customer-facing B2B and B2C applications
- Experienced Scala in using and spark streaming and Akka for ongoing transactions for customers.
- Experienced in developing scripts for doing transformations using Scala.
- Defined rules using JRules that are defined for resources to show details on UI pages. Followed up with Business Analysts to create conditions for business functions using JRules UI.
- Proficient in NoSQL DB such as Apache Cassandra DB, and MongoDB.
- Worked on messaging systems using message brokers such as Kafka, JMS, ActiveMQ, and RabbitMQ.
- Used build/deploy tools Ant, Maven, Jenkins, ClearCase, CVS, SVN, Nexus, Git, ClearQuest, and Sonar.
- Automated repetitive tasks using Python scripts, resulting in increased productivity and efficiency.
- Expert in IDEs - RAD, NetBeans, Eclipse. Application servers WebSphere, Weblogic, JBoss, Tomcat.
- Expertise with the employment of Spring Kafka and Zookeeper apart from JMS as a messaging service.
- Integrated Python scripts with various databases, including SQL- databases (MySQL, PostgreSQL) and NoSQL databases (MongoDB), for data storage and retrieval.
- Used Quarkus, and Spring Core Annotations for Dependency Injection and Spring Boot for microservices.
- Developed CI/CD system with Jenkins on Kubernetes container environment utilizing Kubernetes.
- Know Kotlin Android Extensions framework.

EDUCATION:

Bachelors in Electrical and Electronics Engineering at JNTUH College of Engineering.

TECHNICAL SKILLS:

Category	Technologies/Tools
Java	Collections, Generics, Multithreading, Serialization, Exception Handling, File I/O
J2EE	JSP, JDK, JVM, JRE, Servlet, EJB-Session Beans, Entity Beans, JDB

Programming Language	Java 1.6/1.7/1.8, J2EE, SQL, Python, Shell Scripting, Typescript, PL/SQL
Frameworks	Spring, MVC, Spring Boot, Hibernate
Databases	Oracle, MySQL, Cassandra, No SQL, MongoDB
Middleware	Apache Tomcat, J-Boss, IBM WebSphere, WebLogic, Apache Http
UI Technologies	HTML, XHTML, JavaScript
Web Services	WSDL, SOAP, RESTFUL, XML, JAX-WS, JAX-RS, Microservices

Web Technologies	Angular 6,7,8,9, Js, Node js, React.js, Vue Js, Bootstrap, JSON, Gradle
Amazon Cloud Technologies	EC2, EBS, IAM, Cloud Watch, Cloud Trail, Pivotal Cloud Foundry, S3, Route 53, VPC
Methodology	Waterfall, Agile, SCRUM, TDD, Lean and Kanban
IDE Tools	Eclipse, STS, MyEclipse, IntelliJ
Cloud	Docker, Kubernetes, Terraform, AWS EC2, MongoDB Atlas

PROFESSIONAL EXPERIENCE:

MVP Health Care, Broadway, NJ

Jan 2023 – Present

Sr. Java Full Stack Developer Responsibilities:

- Used advanced Java 1.8 features like Lambda expressions for array operations, collections, enhanced concurrency methods, etc. Migrated all dependencies from Java 1.8 to the latest stable version Java 11+.
- Hands-on experience in monitoring, Analysing, and Configuring the OIPA Applications and Database Servers to ensure optimal performance and infrastructure management on OIPA production and lower environments.
- Developed screens using HTML5, CSS3, SASS, JavaScript, jQuery, Angular 11, React, and AJAX.
- Created Domain Specific Language (DSL) builders using Kotlin to enable declarative configuration.
- Built application UI with a bootstrap library, and used Angular JS to associate HTML elements to models.
- Proactively assess short/long-term design implications that would impact effective and efficient operations of the overall OIPA and the PAS ecosystem.
- Worked closely with internal OIPA Configuration teams as well as the Oracle Development team to manage OIPA SRs.
- Configured XML Schema for the application and used JavaScript for the client-side validation.
- Provide excellent customer service and guide claimants through the claims process.
- Implemented Services and dependency Injection in Angular 11 to connect web applications to backend APIs, and shared code between components.
- Created Angular 11 Components and services using Angular CLI It has a quarkus CLI that can be used as a helping tool to generate and manage project code and dependencies.
- Employed Kotlin's null safety, immutability features, and Functional programming constructs for robust code.
- Implemented custom views, graphical interfaces, and animations using Kotlin Android Extensions.
- Created a database known as SQL AZURE database, which integrates with Active Directory and Hadoop.
- Deployed and maintained Windows phone applications on Azure cloud technologies.
- Knowledge of streaming data processing techniques like micro-batch and continuous streaming in Databricks.
- This makes the executables smaller, their memory footprint smaller, and the execution faster Dependencies.
- Worked in DOM, React Props, Lifecycle methods, and React States and Events.
- Involved in creating web applications utilizing Quarkus, Spring, and Restful web services, used Angular, HTML5,
- Built MEAN applications using MongoDB, Express.JS, Angular-JS, and Node-JS, created Webservices (Restful) to interact with UI using REST API with Node-JS, Express-JS and installing client-side dependencies.
- Implementing Microservices to base on RESTful API utilizing Spring Boot with Spring MVC.
- Implemented secure secret retrieval mechanisms through Terraform data sources to access sensitive data like database passwords or API tokens.
- Used an annotation-driven approach to develop an application using Spring Boot and was involved in setting up the Spring bean profiling. Developed multiple batch processes using Spring Batch using Spring Boot
- Created and injected Spring services, controllers, and DAOs to achieve dependency injection.

□

- Implemented SOA to develop Spring RESTful/Microservices and implemented Spring Eureka, Netflix, and Ribbon as part of Services Discovery using Apache Axis.
- Implemented complex code completion suggestions, quick fixes, inspections, and refactoring's for Java and JSON while ensuring low latency
- Knowledge of Azure tools like Data Factory, Logic Apps, Functions, and API Management.
- Experience with data ingestion into Azure storage services like Data Lake, Blob Storage, SQL, and DW.
- Worked with Quarkus, Spring Framework for Dependency Injection, Spring Context to provide message sources.
- Used Spring Annotations to simplify business logic for creating Spring MVC, and RESTful webservices.
- Implemented pre-authentication and database security using Spring security and securing application access and Spring Batch for scheduling and maintenance of batch jobs.
- Extensively used Hibernate concepts like inheritance, lazy loading, locking & transactions.
- Analysed Maven dependency in the codebase to annotate dependency on Spring Boot into Gradle.
- Experience with Azure devops including Azure Repos, Pipelines, and Artifacts.
- Used React JS for templating for faster compilation and developing reusable components.
- Created and configured Microservices architecture, and integrated it with the React JS application.
- Composed and executed MongoDB scripts to insert and update the NoSQL database and reporting.
- Developed APIs and backend services to interact with the MongoDB database.
- Installed Pivotal Cloud Foundry (PCF) on EC2 to manage the containers created by PCF.
- Implemented security on microservices with Spring Boot Auth server, JWT as OAuth2 mechanism.
- Worked on creating, retrieving, updating, and deleting documents in MongoDB.
- Contributed to custom Terraform providers to integrate with in-house job scheduling and ERP application APIs enhancing developer productivity.
- Built RESTful web services with Node JS Server in the back-end to handle requests sent from the front end using jQuery and Ajax calls. Tested REST services using Google Chrome's POSTMAN plugin.
- Established Terraform-based CI/CD pipelines with validations and checks integrated with a version control system enabling collaboration around infrastructure.
- Created the Docker containers and Docker consoles for managing the application life cycle.
- Performed code reviews for Java back-end code to maintain uniform code quality standards across deliverables.
- Prepared Junit, and Test NG test cases, and executed them as part of the auto-build process from Jenkins Jobs.
- Used GIT for version control, experience with git-bash and git-hub. Used JIRA for bug tracking.

Environment: Java 1.8/11, Microservices, HTML 5, CSS 3, Bootstrap, Angular 11, JavaScript, JSON, Ajax, Maven, Spring, Hibernate, Spring Boot, Restful Webservices, OIPA, PCF, MongoDB, Kubernetes, Node JS, Agile SCRUM, IntelliJ, JBoss, Azure, Jenkins, Git, Docker, JAX-RS, Junit, Log4j, Oracle, Swagger, Agile.

EY, Tampa, FL

Jan 2021 - Oct 2022

Sr. Java Full Stack Developer Responsibilities:

- Developed UI of application modules using CSS, jQuery, Angular JS, AJAX, JSON, and DOJO.
- Developed modules using Core Java APIs, Collections, Java 1.8 (Streams), Jordan API (Dates), Multi-threading, Exception Handling, Generics, Enums, Java I/O, and object-oriented design patterns.
- Developed business applications and web interfaces using the Servoy platform and JavaScript framework.
- Used Angular 8 and Confidential Covalent UI as frameworks to create a Single Page Application (SPA) which can bind data to specific views and synchronize data with the server.
- Created Angular service and integration with RESTful APIs and Angular HTTP Client to send GET/POST requests to fetch data from the server.
- Used J2EE design patterns like DAO and MVC to enhance the existing Java/J2EE-based code base.
- Used Angular components in Angular modules with decorator functions like Component and NgModule.
- Used Node Package Manager (NPM) to install angular-cli, and typescript to develop the angular app in Node.
- Used J2EE design patterns like Value Object Pattern, Session facade, Singleton, Factory, and DAO.
- Extensively used Angular-CLI to generate components, routes, services, and pipes and to run tests.
- Designed and developed GraphQL schemas and resolvers to provide a flexible and efficient API layer for applications.

- Developed back-end Java Spring applications and REST APIs to perform CRUD operations on MySQL and PostgreSQL databases, implementing proper data validation, security, and access control.
- Migrated existing REST APIs to GraphQL to improve performance and developer experience.
- Built Microservices (REST & SOAP) using Spring boot, and Spring security and deployed them to the AWS cloud.
- Used AWS SDK for connection to Amazon S3 buckets as it is used as the object storage service to store and retrieve the media files related to the application.
- Utilized GraphQL subscriptions for real-time data streams and updates between client and server.
- Implemented Spring boot microservices to process the messages into the Kafka cluster setup.
- Implementing or exposing the Microservice architecture with Spring Boot-based services interacting through a combination of REST and Apache Kafka message brokers.
- Designed and developed Java applications using Kafka Streams and Producers/Consumers for real-time streaming data integration between online and back-office systems.
- Wrote server-side scripts to handle business logic and data validation on the Servoy application server.
- Deployed the services using Docker container to host in AWS and utilized the AWS platform to upload data into S3 buckets, and EC2 instances. Monitored the error logs using Log4J and fixed the problems.
- Managed Kafka clusters on AWS EC2 instances leveraging scripts, monitoring, and AWS CLI tools to automate administration tasks like scaling brokers during traffic surges.
- Developed reusable Terraform modules in Java for AWS services like SQS, SNS, Redshift and Elastic Cache speeding up infrastructure setup.
- Created Terraform configurations to set up Kubernetes clusters on AWS EKS.
- Developed a data pipeline using Apache Kafka, and Apache Flink for real-time data processing and storage.
- Analysed Node.JS structure, and REST service by using Java JAX-WS API, and did corresponding configurations.
- Used spring and Spring MVC components to implement the business layer and navigation part of the application.
- Developed using Hibernate mappings, HQL, Query, Criteria, Lazy loading Transactions, and Locking.
- Implemented Hibernate Template to a great extent making use of HQL, Named Parameters, Named Queries, and interfaces such as Expression, Query, and Criteria.
- Developed Spring Boot application with Java drivers to integrate Cassandra.
- Implemented Cassandra data models for storing user profiles, event data, and time-series sensor data with optimal table structure and clustering keys for fast writes and reads.
- Monitored Cassandra cluster for utilization. Knowledge of Cassandra systems backup & recovery.
- Collaborated with project managers, designers, and quality assurance to deliver high-quality Servoy solutions on schedule.
- Set up DevOps pipelines using Jenkins, AWS Code Suite, and GitHub Actions to enable CI/CD, test automation, infrastructure as code, and monitoring.
- Created the Docker containers and Docker consoles for managing the application life cycle.
- Migrated existing applications into Microservices (REST) to provide CRUD capabilities using Spring Boot.
- Configured Cassandra cluster nodes and replication strategies and Performed aggregation and batch operations for analytics on large datasets
- Created AWS S3 buckets to keep the web app files and the CloudFormation templates.
- Worked on AWS EC2, AWS S3, AWS RDS, VPC, IAM, AWS Elastic Load Balancing, Auto Scaling, Cloud Front, CloudWatch, SNS, SES, SQS, and other services.
- Managed state and lock mechanisms for coordination between multiple Terraform apply runs through backends like S3/DynamoDB preventing conflicts.
- Well-versed in end-to-end plugin lifecycle - designing APIs, implementing CI/CD pipelines, distributing to JetBrains Marketplace, collecting analytics, and promoting.
- Data communication between various events and fulfilment systems is developed using Restful API.
- Worked on Rest Web services and Node Rest framework for backend services.
- Involved in unit testing of various modules by generating test cases using Jasmine, Mocha, and Karma.
- Used TOAD to interact with Oracle database, performance tuning DB execution.
- Used Log4j for logging and debugging and used JUnit extensively for testing.

Environment: Java 1.8, AWS, Spring Boot, Microservices, Restful, Apache CAMEL, Kafka, JUnit, Cassandra, Scala, HTML5, CSS, JavaScript, Bootstrap, jQuery, Node JS, Maven, AJAX, XML, XSLT, log4j, Git, Agile.

Wells Fargo, Charlotte,NC

Sep 2019 - Jan 2021

Java Full Stack Developer Responsibilities:

- Designed and developed the REST-based Microservices using Spring Boot, and Spring Data with JPA.
- Developed Microservices to provide Restful API utilizing Spring Boot with various data persistence frameworks such as Hibernate, JPA, and messaging engines.
- Participate in continuing education and training to expand technical knowledge of P&C insurance.
- Developed Single-page applications using Angular 6 components, and directives using Typescript.
- Worked on the web page enhancements using HTML, CSS, Angular 6, JavaScript, Servlets, and JavaBeans.
- Developed Java collection API with Java 8 features, and used Spring security for Authentication, and authorization.
- Investigate claim details, assess damage and liability, and determine appropriate settlement amounts in compliance with policy terms.
- Developed schemas and configured Kafka topics and brokers to enable events streaming from a monolithic legacy system into Java Spring Boot microservices architecture.
- Implemented exactly-once semantics in Kafka consumer applications for at least processing of events using multithreaded design and Kafka transactions providing reliability.
- Optimized Kafka architecture for scale by segregating clusters and streams based on function, data volumes, and consumer group dependencies to control costs and maximize performance.
- Good understanding of data warehousing concepts involved in ETL such as staging area, atomic/granular data, Surrogate Keys, Slowly Changing Dimensions, etc.
- Good experience with OIPA configuration and using extension functionality to integration with enterprise capabilities of Oracle Insurance Policy Administration (OIPA) in Life and Annuity areas.
- Good Experience in Life & Annuity Policy Lifecycle and Capabilities such as New Business, Renewal premiums, Policy servicing, Claims etc.
- Expertise in developing policy administration systems using Oracle Policy Administration System (OIPA), including configuration language, integration, data intake, database architecture, and data extraction patterns; building OIPA extensions; and performing palette and application security implementations, and release management.
- Involved in bundling, and developing React components for the partner homepages using React JS.
- Maintained infrastructure with AWS and worked with database setup and maintenance on AWS EC2.
- Used AWS to build applications that work with AWS S3, EC2, RDS, IAM, Elastic Bean Stalk, VPC, and SQS. ☐ Defined AWS security groups as virtual firewalls to control traffic to reach AWS EC2 instances ☐ Used React JS Components, Forms, Events, Keys, Routers, Animations and Flux concepts.
- Developed components and utility files using JSX which combines HTML and React JS together.
- Developed web pages using HTML 5, SASS, React JS, Redux, Flux, CSS, TypeScript, JavaScript, Bootstrap, and NPM. Created new React components, containers, services, and APIs.
- Manage litigation processes including coordinating with adjusters and defence attorneys.
- Developed Microservices business components and RESTful service endpoints using Spring Boot.
- Maintain up-to-date knowledge of state regulations and insurance laws governing P&C claims.
- Created producer applications in .NET to publish messages to RabbitMQ exchanges.
- Implemented competing consumer patterns for load balancing using RabbitMQ queues.
- Used JavaScript, JQuery, and Dojo for client-side validations and implemented the Basic AJAX implementation.
- Participate in continuing education and training to expand technical knowledge of P&C insurance.
- Used spring components - Aspect Oriented Programming (AOP), Dependency Injection(DI), MVC, DAO, and Transaction Management etc. Worked on Pivotal Cloud Foundry (PCF) to host Cloud Applications.
- Involved in developing UI components using Angular 6 and JSON to interact with RESTful web services.
- Handled a variety of P&C claims including property, auto, liability, marine, worker compensation, etc. Demonstrating broad expertise.
- Used Angular 6 to create a Single Page Application (SPA) to bind data to specific views, and synchronize data.
- Conduct premium audits and underwriting reviews to provide risk and pricing input.
- Used Hibernate as an ORM tool in the persistence layer and developed POJOs, Data Access Object (DAO).
- Deployed applications utilizing AWS Including EC2, S3, VPC, EMR, Cloud Watch, Docker, and Kubernetes Orchestration container (EKS) focusing on high availability, fault tolerance, and auto-scaling.
- Used Spring Core Annotations like Spring DI for Dependency Injection, Spring MVC for REST APIs, and Spring Boot for Microservices. Manage dependency injection using Spring Boot frameworks.

□

- Processed a high volume of property claims following catastrophic weather events and fires. Ensured high-priority handling and quick closure.
- Created plugins to extract data from sources like Apache Kafka, Databases, and Messaging Queues.
- Handled complex commercial P&C claims involving business interruptions and loss of income.
- Use AWS Cloud Watch to monitor AWS services & AWS Cloud Watch logs to monitor the application.
- Installed application on AWS EC2 instances and configured the storage on AWS S3 buckets.
- Involved in writing Test Suites and Test Cases for unit testing and implemented unit testing using Junit.
- Set up the Continuous Integration (CI) and Continuous Development (CD) for the application using Jenkins.
- Configured Jenkins for deployment in Pivotal Cloud Foundry (PCF), integrated with GitHub control.
- Build a CI/CD pipeline using Jenkins automation and GitHub repositories using the webhooks plugin.
- Created continuous integration builds using Jenkins and deployed them on the WebSphere app server.

Environment: Java 1.8, Spring Boot, jQuery, React JS, Spring, Maven, Bootstrap, CSS, Kafka, JavaScript, Log 4J, Angular JS, SoapUI, SVN, Kubernetes, JUnit, OIPA, PCF, Restful, SOAP, AWS, Hibernate, Gradle, Git.
