PROFESSIONAL SUMMARY:

Around 5+ years of Experience in **Data Engineer**, expertise in designing scalable data pipelines and robust **ETL processes**. Proven success in transforming large-scale structured and unstructured datasets into actionable insights while ensuring secure and efficient management in dynamic technology environments. **Adept in SQL, Python, and AWS services**, with a strong understanding of data quality and infrastructure performance. Demonstrated experience in data integrity, **GxP** environments, and cross-functional collaboration to ensure regulatory compliance and drive continuous improvement. **Adept in SQL, Python, and AWS services**, with a strong focus on enhancing data quality.

TECHNICAL SKILLS:

- **Database Query Languages:** SQL, PL/SQL, T-SQL, HiveQL, SparkQL, GraphQL
- **Programming Languages:** Python, Scala, Java, R, C#
- **Big Data-Hadoop Ecosystem:** Hadoop, HDFS, Hive, Impala, MapReduce, Greenplum, Sqoop, HBase, Pig
- **Big Data-Spark Technologies:** Spark Core, Spark SQL, Spark Streaming, SparkR, PySpark, Spark Data Frames, Spark MLlib, Spark GraphX
- **ETL Tools and BI:** Information, SSIS, Azure Data Factory, AWS Glue ODI, Power BI
- **Data Warehouse & Data Lake:** Apache Iceberg, Azure Data Lake, AWS RedShift, Snowflake, Google Big Query, Data Bricks
- **Databases:** Oracle SQL, Azure SQL, SQL Server, DB2, DynamoDB, MongoDB
- **Tools:** Apache Airflow, Jenkins, Splunk, Kubernetes, Elasticsearch
- **Messaging Tools:** ActiveMQ, RabbitMQ, Kafka Cluster
- **Visualization Tools:** Power BI, Tableau

PROFESSIONAL EXPERIENCE:

Client: AT&T, Dallas, TX

Jan 2024 – Till Date

Role: Data Engineer

Responsibilities:

- Ingested and processed telecom data including customer usage logs, call records, and **network performance metrics** using **Apache Kafka and Spark** Streaming to ensure data **integrity**, compliance, and real-time monitoring.
- Migrated legacy on-prem systems containing customer records and usage analytics to **Azure Data Lake** Storage using **Azure** Data Factory and Synapse Analytics, enhancing data accessibility and analytics readiness.
- Designed and implemented **SSIS** packages to support **complex ETL workflows** for transferring, transforming, and cleansing data across various internal platforms, including call data, subscriber activity, and billing details.
- Built and maintained **SSRS** reports for executive dashboards and operational insights, ensuring data accuracy, performance, and timely reporting of telecom **KPIs**.
- Delivered regular updates on **ETL** job statuses, addressing failures and optimizing execution performance across distributed systems such as **Apache Spark** and **Databricks**.
- Built scalable data pipelines with **Databricks** and **PySpark** to transform raw telecom data into curated **datasets** for consumption by analytics and business intelligence teams.
- Improved query performance on large datasets by implementing **SQL** partitioning, indexing, and query tuning strategies.
- Integrated **Azure Data Factory** with **Blob Storage** and **Databricks** to process raw usage logs and deliver refined datasets into **Azure SQL DB**, **Azure Synapse**, and **Snowflake**, streamlining billing and network analytics.
- Migrated data from on-prem **SQL Server** databases to **Azure cloud platforms**, ensuring secure storage and compliance with telecom regulations.
- Wrote **SQL** and **PL/SQL** scripts to manage data transformations and validations for usage trends, **billing** systems, and device telemetry.
- Automated **ETL** workflows using **Python**, **UNIX scripting**, and **libraries like Pandas, NumPy, and PySpark** to streamline telecom analytics operations.
- Designed **Power BI** dashboards (line charts, **KPIs**, scatter **plots**, **matrices**, **box plots**, etc.) to **visualize network usage**, dropped calls, plan utilization, and customer churn, sourcing data from multiple internal systems.

ENVIRONMENT: Azure Data Factory, Apache Airflow, Talend, Spark, Azure SQL Database, Snowflake, SQL Server, Hive, T-SQL, Spark, Kafka, Azure Data Lake, Azure Synapse Analytics, Python, Java Scala, Power BI Tableau, Git, Kubernetes.

Client: Value Labs, INDIA

Aug 2021 - Aug 2023

Role: Azure Data Engineer

Responsibilities:

- Spearheaded the development of scalable and secure data pipelines using **Azure Data Factory (ADF)** to support enterprise-wide data ingestion and transformation.
- Engineered high-throughput data integration solutions to consolidate structured and semi-structured data from **Oracle, SQL Server, AWS S3**, and other sources into **Snowflake**, enhancing data accessibility for downstream analytics.
- Developed **PySpark** workflows within **Azure Databricks** for large-scale data processing and real-time transformation, improving processing performance for critical business datasets.
- Architected end-to-end ingestion frameworks for **Delta Lake**, supporting both batch and streaming data ingestion in formats such as **JSON, XML, and YAML**.
- Designed and managed multi-cluster Snowflake warehouses to **enable parallel** processing and cost-effective compute scaling.
- Incorporated **AWS Athena** for federated query capabilities across hybrid **cloud platforms**, improving analytics flexibility and data discovery.
- Modernized legacy **SSIS-based ETL** workflows by reengineering them in **ADF**, achieving greater agility and minimizing operational risks.
- Enforced enterprise data security by managing **IAM policies, Azure Service Principals**, and encryption strategies through **Azure Key Vault**.
- Deployed **CI/CD pipelines** using **Azure DevOps, Git**, and **Databricks** Repos, accelerating feature deployment and ensuring code integrity.
- Delivered robust self-service analytics capabilities by integrating **Snowflake** with **Power BI**, creating real-time executive dashboards for telecom **KPIs**.
- Crafted and optimized **SQL** scripts and stored procedures to meet complex reporting and transformation requirements.
- Used **Azure Data Explorer** for near real-time monitoring of pipeline performance and system metrics.
- Facilitated **Agile** delivery by leading sprint ceremonies, managing tasks through **JIRA**, and coordinating cross-functional development.

Environment: Azure Data Factory, Azure Databricks, Apache Spark, PySpark, Snowflake, Oracle DB, SQL Server, AWS S3, Delta Lake, Azure DevOps, Databricks Repos, Git, Bitbucket, Power BI, SQL Server Analysis Services (SSAS), SSIS, JIRA, Python, JSON, XML.

Client: Zensar technologies, INDIA

Feb 2020 – Jul 2021

Role: Data Engineer

Responsibilities:

- Created **AWS** storage resources and integrated with third-party platforms via **RESTful** services. Led real-time data processing with **Apache Kafka** and **Flink** for seamless streaming and analytics, **SQL** data processing, and **UNIX** shell script.
- Create and optimize stored procedures and functions for automating report feeds and **data extraction**.
- Used **Python** with **MySQL** and **HBase** connectors for data extraction, optimized pipelines with PySpark, automated job flows with **Airflow** for **EMR/EC2**, and applied **Pandas, NumPy, TensorFlow, Keras, Matplotlib, Sci-kit** Learn for data processing and **ML**.
- Developed **PL/SQL** procedures, managed **Teradata** tables with **HiveQL**, and created scalable solutions with **Cassandra**.
- Used **AWS EMR** to transform and transfer large volumes of data between **AWS S3, Redshift, and DynamoDB**.
- Set up high-availability **EC2** instances, migrated systems to **AWS**, implemented Terraform and **Kubernetes** with **RBAC**, and optimized pipelines with load testing, using **Scrum** and **Kanban** for workflow efficiency.
- Built **AWS Glue** Jobs for data cleaning, and transformations, and set up **Glue Crawlers** for schema management.
- Developed **AWS Lambda** functions with **Spark** and custom libraries, and configured **CloudWatch** for monitoring, alarms, and **logs**.

ENVIRONMENT: Python, SQL, PySpark, NumPy, Pandas, Matplotlib, Oracle, Hadoop, HDFS, Hive, GitHub, PyTest, AWS Glue, AWS S3, AWS Step functions, Jenkins, Docker, Terraform, Django, PyCharm, PyQuery, HTML5, AWS, AJAX, Jira, GIT, Windows.
