

MANISHA MITTAPELLI

Data Analyst | Saint Louis, MO | manisha.m7738@gmail.com | LinkedIn URL:
<https://www.linkedin.com/in/manishamittapalli-dataanalyst/> | +1 314-728-9899

PROFESSIONAL SUMMARY:

Data Analyst with 5+ years of experience delivering data-driven insights, automated dashboards, and cloud analytics solutions across financial services and e-commerce domains using SQL, Python, Power BI, Tableau, and Snowflake. Skilled in ETL workflows, data pipeline management, and data modeling to support financial reporting, revenue analysis, customer analytics, and operational performance tracking. Hands-on exposure to Generative AI tools for AI-assisted reporting, KPI summarization, and insight automation. Known for ensuring data accuracy, integrity, and compliance while improving reporting efficiency and enabling data-informed decision-making for business stakeholders.

TECHNICAL SKILLS:

- Programming & Scripting: Python, R, SQL
- Data Analysis & Libraries: NumPy, Pandas, Matplotlib, Scikit-Learn
- Databases & Query Languages: MySQL, PostgreSQL, Snowflake
- Data Platforms & CRM: Salesforce CRM, Databricks
- Data Visualization: Power BI, Tableau
- Cloud & Big Data Tools: AWS, Hadoop
- Data Engineering & ETL: Data Wrangling, ETL Workflows, Data Pipeline, Data Modeling, Data Warehousing, Data Cleansing, Data Validation
- Generative AI (Exposure): GPT, Claude, Gemini, AI-assisted Analytics, LLM-assisted Reporting
- GenAI Concepts: Prompt Engineering, Inference, Output Evaluation, Guardrails, Human-in-the-Loop
- Business & Reporting: KPI Monitoring, Dashboard Automation, Business Analysis, Ad-hoc Analytics
- Tools & Platforms: Git, GitHub, Jupyter Notebooks, MS Excel (Pivot Tables, VLOOKUP, Conditional Formatting)
- Project Management & Methodologies: Agile Scrum, Jira, Confluence

PROFFESIONAL EXPERIENCE:

Client: iCapital

Role: Data Analyst

Aug 2025-Present

- Led end-to-end data pipeline, modeling, and reporting solutions using Snowflake and Power BI, delivering automated dashboards, KPIs, and metrics with 95% data accuracy.
- Developed advanced SQL queries and analytical views for ad-hoc analysis, trend identification, variance analysis, and performance monitoring across financial datasets.
- Built and maintained Power BI dashboards sourced from governed cloud datasets, providing real-time visibility into fund performance, investor activity, SLAs, and exceptions.
- Performed large-scale data transformation and enrichment using Databricks SQL and Python (Pandas, NumPy), achieving 97%+ consistency across reporting layers.
- Conducted cohort analysis, anomaly detection, and root-cause analysis, translating complex data into actionable business insights.
- Applied LLM-assisted analytics (GPT, Claude, Gemini) for KPI summaries, narrative reporting, and exception analysis, reducing manual work by 20–25%.
- Designed prompts and evaluation metrics for LLM outputs to ensure alignment with enterprise data definitions.
- Reviewed AI-assisted outputs via reconciliation and human-in-the-loop validation to ensure accuracy, consistency, and compliance.
- Collaborated with data governance, finance, and operations teams to define KPIs, reporting logic, and access controls, ensuring auditable analytics delivery.
- Maintained documentation for analytics logic, data lineage, and AI-assisted workflows using Confluence.
- Worked in Agile/Scrum teams, contributing to sprint planning, backlog refinement, and pipeline optimization.

Environment: Databricks (PySpark, SQL, Notebooks), Snowflake, AWS S3, SQL, Python (Pandas, NumPy), Power BI, Advanced Excel, Salesforce CRM, Cloud ETL Pipelines, Data Quality Frameworks, Okta, Agile/Scrum, Jira, JSON/CSV/XML Processing

Client: JP Morgan Chase

Role: Financial Data Analyst

Jul 2024 – Jul 2025

- Gathered, analyzed, and interpreted financial and operational data from Snowflake and enterprise systems (50K+ records) to evaluate business performance and support recurring performance reporting.
- Developed and maintained KPI dashboards and recurring performance reports in Power BI, tracking revenue, cost, operational efficiency, and variance metrics for cross-functional stakeholders.
- Built SQL-based data models, views, and transformations across Snowflake, MySQL, and PostgreSQL to support financial reporting and operational analysis, improving query efficiency by 25–30%.
- Identified trends, variances, and performance gaps through structured data analysis, supporting cost optimization discussions and revenue performance insights.
- Audited and maintained data integrity across enterprise systems using SQL and Python (Pandas, NumPy), resolving inconsistencies and improving dataset accuracy to 95%+.
- Supported budgeting and forecasting initiatives by preparing validated datasets, performing variance analysis, and delivering structured reports for planning cycles.
- Designed Excel-based analytical models using Pivot Tables, XLOOKUP, financial formulas, and structured references to support ad hoc financial analysis and leadership reporting.
- Created standardized reporting structures and KPI definitions to improve consistency in business intelligence processes and enterprise reporting methodologies.
- Provided ad hoc reporting and analytical support to finance and operations leadership, delivering timely insights in a fast-paced environment.
- Contributed to continuous improvement of reporting tools, data models, and BI processes by documenting metadata, refining data structures, and enhancing dashboard usability.
- Collaborated with cross-functional teams to translate business requirements into technical data logic while ensuring compliance with internal data governance standards.
- Managed multiple reporting and analytics priorities within Agile/Scrum frameworks, maintaining strong attention to detail and problem-solving focus.

Environment: Snowflake, MySQL, PostgreSQL, AWS S3, Hadoop; SQL (CTEs, Joins, Views, Performance Tuning); Python (Pandas, NumPy); Power BI (DAX, Data Modeling, KPI Dashboards); Advanced Excel (Pivot Tables, XLOOKUP, Financial Modeling); Data Validation, Data Integrity Auditing, Variance Analysis, Forecasting Support; JSON, CSV; Agile/Scrum.

Client: Big Basket

Role: Data Analyst

Jan 2021 – Jul 2022

- Performed exploratory data analysis using Python (Pandas, NumPy) to calculate mean, median, mode, and apply aggregations on datasets containing large volume of records, improving data clarity for strategic reporting.
- Identified trends, anomalies, and distribution patterns that contributed to a 15% improvement in customer retention initiatives and optimized inventory allocation.
- Leveraged SQL joins and aggregations to analyze sales, customer, and inventory data across internal and external data sources, reducing manual data compilation time by 30%.
- Performed variance and trend analysis using SQL and Python to monitor KPIs such as product demand, sales velocity, and customer purchase frequency, resulting in a 12% reduction in overstock inventory and better promotion targeting.
- Designed dashboards in Tableau Desktop, integrating calculated fields, dynamic parameters, and LOD expressions to analyze sales variance and customer demand trends, improving forecasting accuracy by 20% and reducing reporting time by 35%.
- Utilized Microsoft Excel features such as Pivot Tables, VLOOKUP, conditional formatting, and data validation to analyze monthly retail sales data.
- Version control was managed using Git in a collaborative analytics environment. Git was used to track changes in Python and SQL scripts, manage versions of Jupyter notebooks, and coordinate code contributions across branches using GitHub.
- Delivered data analytics solutions in an Agile Scrum environment using JIRA to manage bi-weekly sprints, track user stories, and collaborate with cross-functional teams, increasing feature delivery rate by 25%.

Environment: Python 3.7 Pandas 1.0, NumPy 1.18, SQL 2016 (MySQL 8, PostgreSQL 12), Tableau Desktop 2020.1,

Git 2.26, Microsoft Excel 2016/365, JIRA 8.6, Agile Scrum.

Company: Vedanta

Role: Software Engineer

Feb 2019 – Jan 2021

- Navigated and managed AWS resources using the AWS Management Console, gaining hands-on experience with core services including EC2, S3, IAM, VPC, and RDS.
- Provisioned and maintained 10+ EC2 instances for web applications, achieving 97% uptime through optimized configurations and auto-scaling policies.
- Configured and managed AWS S3 buckets to securely store and archive records, ensuring durability and seamless data retrieval.
- Created and managed IAM users, groups, roles, and policies using JSON, enabling secure access for 8+ team members while enforcing least-privilege principles.
- Designed and deployed custom Amazon VPCs with segregated public and private subnets across multiple availability zones to enhance security and fault tolerance.
- Configured Internet Gateway and NAT Gateway to facilitate secure internet access for instances, reducing latency and improving throughput by 25%.
- Set up and maintained Amazon RDS instances (MySQL), handling 100K+ transactional queries daily with automated backups, multi-AZ deployments, and performance tuning for high availability.

Environment: AWS Cloud, AWS Management Console, Amazon EC2, Auto Scaling, Elastic Load Balancer (ELB), Amazon S3, AWS IAM, IAM Users, Groups and Roles, JSON Policies, Amazon VPC, Public Subnets, Private Subnets, Internet Gateway, NAT Gateway, Route Tables, Security Groups,

EDUCATION:

Aug 2022 – May 2024

Masters in Information Systems and Technology
University of Missouri-Saint Louis

CERTIFICATION:

- IBM – Python for Data Science
- Generative AI Mastermind - Outskill
