👤 Portfolio

SUMMARY

Full Stack Java Developer with 3 years of experience building scalable web applications using Java, Spring Boot, and modern frontend frameworks. Skilled in developing secure RESTful APIs, optimizing application performance across all layers, and implementing CI/CD pipelines that streamline deployment processes. Consistently deliver solutions that reduce operational inefficiencies while maintaining high code quality standards and system reliability.

SKILLS

Methodologies: SDLC, Agile (Scrum/ Kanban), MVC Architecture

Programming Languages: Java (core java, J2EE, java 8+), Python, SQL

Frontend Development: HTML5, CSS3, JavaScript, React.js, Typescript, Angular, Redux, Bootstrap

Backend Development: Spring Framework (Spring Boot, Spring MVC, Spring Security), RESTful API, Microservices architecture, Hibernate, Node.js

Database Technologies: MySQL, PostgreSQL, MongoDB

Cloud Platforms & DevOps: AWS, Azure, Docker

Version Control and CI/CD pipelines: Git, GitHub, Jenkins, BitBucket

Build Tools: Maven, Gradle

IDEs: IntelliJ IDEA, Visual Studio code

Testing Tools: JUnit, Mockito, Postman API

Soft Skills: Problem-solving, Collaboration with cross functional teams, Attention to detail, Strong verbal and written communication

EDUCATION

Masters in Computer Science | University of Central Missouri, Warrensburg

December 2024

Bachelor of Science in Computer Science | Jawaharlal Nehru Technological University, India

July 2023

PROFESSIONAL EXPERIENCE

Full Stack Java Developer | BNY, USA

May 2024 - Current

- Developed and maintained **Java 11** microservices with **Spring Boot** for financial transaction processing, implementing **MVC architecture** and robust validation rules that reduced transaction failures by 15% while working in an **Agile Scrum** environment.
- Built secure **RESTful APIs** using **Spring Security** that interface with multiple payment networks, ensuring PCI compliance throughout the SDLC while effectively collaborating with cross-functional teams.
- Designed responsive transaction monitoring dashboards using **React.js** and **Bootstrap**, enabling operations teams to quickly identify and resolve issues, significantly improving system reliability.
- Implemented **CI/CD pipelines** using **Jenkins**, **GitHub** for version control, and **AWS** CodeDeploy for cloud deployment, performing code reviews and writing JUnit tests that improved code quality and reduced deployment time from 2 hours to 30 minutes.
- Troubleshoot critical production issues within SLA timeframes using **IntelliJ** debugging tools and optimized **MySQL** database queries, resulting in 20% faster transaction processing and enhanced system performance.

Full Stack Java Developer | Informative Web Solutions, India

August 2021 - July 2023

- Implemented **RESTful APIs** using **Spring Boot** and **Java 8+** for an EHR system, with **Spring Security** for authentication, encryption, and Indian healthcare data protection, applying MVC to seamlessly connect patient management and clinical documentation modules.
- Developed responsive healthcare interfaces using **Angular** with **TypeScript**, **HTML5**, and **CSS3**, improving prescription management system usability and reducing data entry time by 25% through collaborative design with clinical stakeholders.
- Optimized system performance in an **Agile** environment using **Angular lazy loading**, **Spring Boot API caching**, and **Hibernate query refinement** with **PostgreSQL**, enhancing response times for healthcare analytics dashboards through multi-layered optimization.
- Contributed to a microservices migration using **Spring Cloud** and **Docker** deployed on **Azure** for disease surveillance systems, used **Jenkins** pipelines for continuous deployment reducing integration issues when connecting to third-party medical devices.
- Established quality assurance processes by writing comprehensive **JUnit** and **Mockito** tests for hospital metrics modules, achieving 85% code coverage while using Git and GitHub for version control in an enterprise healthcare environment.

PROJECTS

E-Commerce: Developed a robust e-commerce Java full-stack website using Spring Boot and React, delivering seamless product browsing, secure authentication, order management, and integrated payment processing. Engineered for scalability and security with real-time updates, inventory management, and payment gateway integrations to optimize the shopping experience.

Flight Booking: Developed a Flight Booking system using the MEAN stack, featuring robust user authentication, flight search, and booking logic powered by Node.js and Express.js. Utilized MongoDB for flight data and user profiles, while Angular provided an interactive interface with API integrations and secure payments.

PUBLICATIONS

Published research paper titled "**Automated Sentimental Analysis of Twitter Data**" showcasing an innovative NLP model for sentiment analysis on Twitter. The study compares algorithm accuracy and processing time, featuring a user-friendly GUI for training on diverse datasets and extracting sentiment from consumer and political feedback.
