

Maruthi Phanindra Ayyagari

Full Stack Developer

maruthi0802@gmail.com | (816) 797-4911 | USA | LinkedIn | GitHub

Summary

Full Stack Developer with 5+ year's experience in building scalable web applications and microservices using .NET, React, and modern DevOps practices. Skilled in both frontend and backend development, cloud deployment, API integration, and AI-based solutions. Proven ability to collaborate across cross-functional teams, drive technical solutions, and deliver high-quality software aligned with business goals.

Technical Skills

- Frontend:** React, Tailwind CSS, HTML5, CSS3, JavaScript (ES6+), responsive UI/UX, state management (Zustand, Redux)
- Backend:** C#, .NET Core / .NET, Clean Architecture, DDD, REST API, gRPC microservices, ADO.NET, Entity Framework, Dapper
- Databases & Data Tech:** SQL Server, NoSQL options, data warehouse design, Azure Data Factory, Vector databases (Pinecone), document classification/extraction
- DevOps & Cloud:** Azure (AKS, Functions), Docker, Kubernetes, Helm, CI/CD pipelines (GitHub Actions), automated testing (xUnit, Playwright, E2E, snapshot), observability (OpenTelemetry, Prometheus, Grafana)
- Security & Identity:** OAuth2, OIDC, SAML, RBAC, claim-based authorization, IdentityServer, Keycloak, secure coding / compliance (SOC2, ISO standards)
- Tools & Documentation:** Swagger / OpenAPI, AutoMapper, FluentValidation, Swagger documentation, clean code practices, storybook, code analysis (SonarQube)
- Soft Skills & Methodologies:** Agile / Scrum, requirement gathering, cross-team collaboration (UX, legal, compliance), feature flag A/B testing, usability testing, problem solving, communication, adaptability

Professional Experience

Full Stack Developer, HCL Tech (Client – Citi Group)	10/2024 – Present Remote, USA
- Worked on CitiSmart Onboarding Platform using LangChain and Pinecone for AI-based document parsing and search. Led requirement gathering with compliance, onboarding, and legal teams to define classification rules, risk scoring, and workflow triggers. - Created responsive, accessible UIs with React (Vite), Tailwind CSS, and Zustand for state. Implemented A/B testing using feature flags. Collaborated with UX and product teams in usability testing and documentation of UI patterns. - Developed .NET 8 microservices in C# using Clean Architecture and DDD, supporting onboarding, document verification, and KYC validations. Collaborated with business analysts to translate requirements into domain models and service boundaries. - Integrated internal CitiKYC-BERT via gRPC, enabling entity extraction from documents. Built REST APIs using ASP.NET Core, with FluentValidation and AutoMapper. Kept API documentation using Swagger/OpenAPI, aligning with internal governance standards. - Secured services with IdentityServer and Keycloak for OAuth2, OIDC, and SAML-based SSO. Defined RBAC policies and claim-based authorization. Worked with cybersecurity teams to align with Citi's SOC2 and ISO standards. - Automated deployments using GitHub Actions, covering build, xUnit tests, Playwright E2E tests, Storybook snapshots, and code analysis with SonarQube. Participated in documentation of CI/CD flow and sprint-based release planning. - Deployed services on Azure Kubernetes Service (AKS) using Docker and Helm. Enabled observability with OpenTelemetry, Prometheus, and Grafana. Worked with SREs to improve MTTR and documented runbooks for production support.	
Software Developer, Gyansys	07/2023 - 09/2024 USA
- Developed interactive front-end applications using React and JavaScript, enhancing user experience and responsiveness while collaborating closely with design teams to deliver seamless, high-performance interfaces across multiple platforms. - Engineered robust RESTful APIs using C#, .NET Core, and SQL Server, enabling critical business functionalities and ensuring scalable backend services with enhanced data integrity and efficient client-server communication. - Designed and optimized a data warehouse using Azure Data Factory, significantly improving data pipeline performance by 67%, and enabling advanced analytics and reporting capabilities across departments. - Led Agile development teams to implement microservices-based architectures, integrated Swagger for API documentation, and established automated testing, increasing deployment efficiency and software quality by over 50%.	
Full Stack Developer, NTT Data	03/2018 - 12/2021 Hyderabad, India
- Developed and maintained enterprise-grade web applications using ASP.NET Core, JavaScript, and Dapper, reducing system load times by 44% and improving performance across sales, operations, and customer engagement modules. - Designed responsive front-end components using HTML5, CSS3, JavaScript, and AJAX, enhancing UI/UX and increasing business process efficiency by 50% through modern, intuitive interfaces and cross-browser compatibility. - Engineered scalable backend logic using ADO.NET and Entity Framework, improving database transaction efficiency and increasing throughput by 35% across multiple data-heavy applications and reporting systems. - Built and deployed workflow automation features in ASP.NET, streamlining internal sales and CRM operations, which resulted in a 20% increase in revenue through enhanced lead management and reporting capabilities. - Utilized Git and Azure DevOps for source control, continuous integration, and agile project management, improving code quality, team collaboration, and reducing deployment time through efficient CI/CD pipelines. - Minimized application errors by 44% through effective use of DevExpress, AJAX, and object-oriented programming principles, supported by thorough documentation and adherence to clean code and scalable architecture standards.	

Education

University of Missouri – Columbia, MO, USA	
Master of Science in Computer Science	01/2022 – 05/2023
Jawaharlal Nehru Technological University – Hyderabad, India	
Bachelor of Technology in Electronics and Communication Engineering	08/2013 – 05/2017

Certificates

Microsoft Azure Fundamentals – AI	
Google AI Essentials	
Machine Learning Specialization (Offered by Stanford University & DeepLearning.AI on Coursera)	
Participant – Microsoft AI Agents Hackathon (Build an AI-powered WhatsApp automation solution using LLMs and classification systems)	

Projects

LLM AI Project with Vector Database Integration

- Built and deployed a scalable full-stack NLP-based application with optimized pipelines, integrated vector database for efficient LLM tasks, improving data processing by 20% and retrieval accuracy by 30% using Python and cloud infrastructure.

Gemini AI Clone Development

- Created a Gemini AI clone using React and large language models, integrating advanced AI capabilities into a front-end application, resulting in a 50% improvement in response accuracy and demonstrating expertise in LLM integration and UI development.

AI Chatbot with Customized Copilot

- Developed an AI chatbot powered by a custom Copilot accessing Azure SQL through APIs, enabling real-time intelligent support and reducing customer service tickets by 30% through faster and context-aware automated responses.
