SUMMARY

Data professional with an MS in Business Analytics and 2+ years of experience in data analysis, machine learning, and predictive modeling. Skilled in Python, SQL, Tableau, and AWS, with proven expertise in developing end-to-end ML solutions and leveraging advanced analytics and visualization tools to deliver actionable business insights.

EDUCATION

University of Maryland-College Park

Master of Science, Business Analytics, GPA: 3.7/4.0

College Park, MD

December 2024

International Institute of Information Technology Bhubaneswar

Bachelor of Technology, Information Technology, GPA: 3.8/4.0

Odisha, India

June 2022

WORK EXPERIENCE

Tiger Analytics

Chennai, India

Data Analyst

January 2022-July 2023

- Monitored performance of multiple machine learning models, tracked data drift/trends as part of the ML engineering team, improving decision making efficiency by 30% and mitigating prediction errors.
- Developed automated Python scripts for report generation and data visualization, communicating data breach insights through charts/graphs, reducing manual effort by 45%.
- Led a team of 5 to standardize an AWS SageMaker CI/CD pipeline solution to improve data processing and feature engineering for new ML models, boosting model onboarding efficiency by 20%.
- Leveraged advanced statistical techniques to identify 15+ key trends and patterns for predictive analysis, delivering monthly analytical results to stakeholders that drove a 25% improvement in client satisfaction scores.

Aero2Astro

Chennai, India

Data Science Intern

October 2020-March 2021

- Developed ML models using Python & TensorFlow that improved customer retention by 32%.
 - Built automated Spark ETL pipelines processing 5TB+ data daily, reducing processing time by 65% while maintaining 98% accuracy.
 - Conducted 40+ A/B tests using SQL and R, driving 28% increase in user engagement and informing key product decisions.
-

SKILLS

Programming Languages: Python, R, SQL

Data Analysis: Numpy, Pandas, Scikit-Learn, Apache Spark, PyTorch, Tensorflow, Microsoft Excel, Tidyverse, A/B Testing

Data Visualization: Tableau, PowerBI, Matplotlib, Seaborn, GGplot

Tools and Frameworks: Amazon Web Services (AWS), Git, Docker, Google Suite, Databricks

PROJECTS

Total Wine & More: Demand Forecasting Model (Python, Machine Learning, Tableau)

- Developed an end-to-end predictive modeling solution using Python, Pandas, and Scikit-Learn to forecast demand for multiple beverage categories and 1000+ store locations, analyzing 52 weeks of retail data and external market factors.
- Performed time series analysis and ETL processes on 100K+ item-store level transactions, visualizing sales trends and anomalies with Tableau and Excel.
- Built machine learning models for retail analytics achieving 92% forecast accuracy (MAPE) and reducing prediction error by 15%, enabling data-driven assortment optimization.

Fraud Detection in Credit Cards (Python, Exploratory Data Analysis, Statistical Analysis)

- Analyzed 50K+ credit card transactions using Python libraries (Scikit-Learn, Pandas, NumPy), implementing automated data cleaning pipelines that reduced preprocessing time by 40%.
- Developed an ensemble ML model combining bagging and boosting models like Random Forest, SVM, and XGBoost to achieve 96% fraud detection accuracy, reducing false positives by 25%.

Airbnb Booking Rate Prediction (R, SQL, Tableau, Predictive Modeling)

- Developed a predictive model for Airbnb bookings with 95% accuracy using XGBoost algorithm on 100,000 listings.
- Leveraged extensive feature engineering and advanced Machine Learning algorithms, focusing on 43 predictors such as location, price, and availability to guide hosts in maximizing profitability.
