

# Navadeep Gottigundala

## Software Engineer | Java Full Stack Developer

Hartford, CT | +1 860-281-2443 | navadeepgot@gmail.com| LinkedIn

### SUMMARY

Experienced Java Full Stack Developer with 4+ years of experience building and scaling secure, cloud-native healthcare platforms across India and the US. Strong background in Java-based microservices, event-driven architectures, and full-stack development using Spring Boot, React, Angular, Kafka, and AWS. Proven track record of delivering high-throughput claims and patient engagement systems, integrating AI-assisted fraud and validation services, and optimizing performance, reliability, and data accuracy at enterprise scale. Experienced in designing compliant, production-ready systems with strong security, observability, and CI/CD practices. Known for improving operational efficiency, reducing manual workflows, and delivering resilient solutions in highly regulated environments.

### EXPERIENCE

United Healthcare Group, USA

Sr. Full Stack Developer

Jan 2025 – Present

- Architected a real-time, enterprise-grade claims adjudication and patient engagement platform by integrating eligibility, provider, and fraud intelligence across 12+ upstream systems using Java 17, Spring Boot microservices, Kafka event streaming, PostgreSQL, and AWS EKS, improving data accuracy and operational consistency by 40%.
- Engineered AI-assisted fraud and anomaly scoring services using Python, FastAPI, XGBoost, MLflow, and SageMaker, seamlessly consumed by Java-based workflows to enable synchronous and asynchronous risk evaluation, reducing manual claim review volume by 55%.
- Optimized high-throughput claims validation pipelines with Spring WebFlux, Redis caching, and reactive patterns, cutting claims adjudication latency by 48% while reliably supporting peak loads of 200K+ claims per day.
- Developed secure, role-aware patient and claims operations dashboards using React 18, TypeScript, Redux Toolkit, and Tailwind CSS, increasing analyst productivity and patient self-service task completion by 38%.
- Implemented HIPAA-compliant security, audit logging, and encrypted data flows across distributed services using OAuth2, JWT, Spring Security, IAM, and fine-grained RBAC, achieving a 90% reduction in unauthorized-access incidents and passing compliance audits with zero high-severity findings.
- Strengthened platform resilience and observability by integrating Kafka consumer groups, circuit breakers, Kubernetes auto-scaling, OpenTelemetry, ELK, and Grafana, achieving 99.95% service availability under fluctuating production traffic.
- Accelerated release velocity and system reliability by designing CI/CD pipelines, infrastructure-as-code, and feature-flagged deployments with Docker, Kubernetes, Terraform, GitHub Actions, and LaunchDarkly, improving release stability by 40% and reducing regulatory change turnaround time by 30%.

Happiest Minds Technologies, India

Software Engineer

Jan 2021 – Nov 2023

- Engineered healthcare backend microservices for appointment booking, claims intake, validation, and status tracking using Java 8/11, Spring Boot, JPA/Hibernate, and REST APIs, improving overall appointment and claims-processing efficiency by 40% across high-traffic hospital systems.
- Designed hybrid data architectures combining MySQL for transactional claims data and MongoDB for clinical notes and documents, reducing data inconsistency issues by 35% through optimized schemas, indexing, and controlled migrations with Flyway.
- Orchestrated event-driven workflows for claim updates, notifications, and reporting using Kafka producers and consumers, cutting cross-service latency by 45% compared to synchronous REST-based integrations.
- Developed responsive, API-driven Angular dashboards for patient profiles, appointments, claims history, and exception tracking, increasing task completion efficiency for hospital admins and support teams by 30%.
- Optimized frontend performance using RxJS observables, lazy-loaded modules, shared UI libraries, and CDN-backed asset delivery, reducing page load times by 35% and improving user experience under peak usage.
- Secured healthcare APIs and data access with JWT-based authentication, role-based authorization, and Spring Security controls, ensuring compliance-ready access for doctors, administrators, and support staff while minimizing exposure risks.
- Implemented backend validation and reporting services to detect missing fields, invalid codes, and data mismatches using rule-based engines and structured XML/JSON parsers, reducing claims rework and corrections by 60%.
- Automated scheduled reporting and operational workflows using Quartz Scheduler, Kafka pipelines, and containerized services, supporting 10K+ daily transactions with consistent performance during peak hospital hours.
- Strengthened system stability and release confidence by configuring centralized logging, monitoring, and alerting with CloudWatch, ELK Stack, Docker, Jenkins, and CI pipelines, cutting production issue resolution time by 50% and lowering UI-related defects by 50%.

### SKILLS

**Programming Languages:** Java (8/11/17), Python, TypeScript, JavaScript, SQL, Shell Scripting  
**Backend Frameworks & APIs:** Spring Boot, Spring MVC, Spring Data JPA, Spring Security, Spring Cloud, Spring WebFlux, RESTful APIs, Microservices Architecture, Reactive Programming  
**Frontend Development:** React 18, Angular, TypeScript, Redux Toolkit, RxJS, Tailwind CSS, HTML5, CSS3, Material UI  
**Databases (SQL & NoSQL):** PostgreSQL, MySQL, MongoDB, Redis Cache, Query Optimization, Indexing, Schema Design, Transactional & Document Data Modeling  
**Cloud & Infrastructure:** AWS (EKS, EC2, S3, RDS, IAM), Kubernetes, Docker, Terraform, Cloud-Native Architecture, Auto-Scaling & High Availability Systems  
**Messaging & Streaming:** Apache Kafka, Kafka Consumers & Streams, Event-Driven Architecture, Asynchronous Processing, Distributed Workflows  
**AI / ML & Data Services:** FastAPI, XGBoost, MLflow, AWS SageMaker, Fraud & Anomaly Scoring Services, Model Integration with Backend Systems  
**CI/CD, DevOps & Observability:** GitHub Actions, Jenkins, CI/CD Pipelines, Infrastructure as Code, OpenTelemetry, ELK Stack, Grafana, Centralized Logging & Monitoring  
**Security, Compliance & Best Practices:** OAuth2, JWT, RBAC, HIPAA Compliance, Secure API Design, Encrypted Data Flows, Audit Logging, Healthcare Data Governance

## EDUCATION

Masters in Computer Science

Jan 2024 - May 2025

Lewis University, Romeoville, Illinois, USA

## PROJECTS

### Consumer Banking Platform Modernization

- Led the design and development of Spring Boot microservices and a React-based portal, implementing secure OAuth2/JWT authentication, Dockerized deployments, and automated CI/CD pipelines on AWS EKS for scalable, reliable banking services.
- Delivered major performance gains doubling transaction throughput, cutting API latency by 40%, ensuring 99.9% uptime, and reducing operational costs by 30%, accelerating feature delivery 3× faster.

### E-Commerce Platform Overhaul

- Revamped a legacy e-commerce system into a modern microservices-based, cloud-deployed platform using React, Spring Boot, MongoDB, Redis, and Kafka, with automated CI/CD and container orchestration on AWS.
- Improved load times by 75%, boosted mobile purchases by 8%, and increased overall conversion rates by 5.6%, driving a 15% year-over-year revenue increase for the retailer.

### Telehealth Platform Development

- Developed a secure, HIPAA-compliant telehealth platform using Spring Boot microservices, Angular, and WebRTC on AWS, improving scheduling efficiency by 40%, reducing patient no-shows by 15%, and achieving 24/7 uptime with 4.8/5 user satisfaction.
