Education

Master of Computer Science (GPA: 3.83)

May 2026

Illinois Institute of Technology, Chicago, IL

- Relevant Coursework: Enterprise Web Application, Machine Learning, Software Systems Architecture, Software Modeling Development using UML, Mobile Application Development.

Experience

Software Engineer Intern

Present

ONEBIT Inc., Chicago, IL

- Improved transaction categorization and reporting accuracy by developing intelligent filters, real-time category search, and responsive UI components using **React**, **Node.js**, and **Prisma**.
- Fixed major inconsistencies in uncategorized expense calculations and optimized front-end data handling for seamless alignment with back-end financial logic.
- Enhanced reliability through automated **Cypress tests**, transaction deduplication via **SHA-256 hashing**, and cross-account transfer matching, strengthening data integrity and UX.

Software Developer Intern - Full Stack Developer

May 2025 - Aug 2025

Find Me LLC, Charlotte, NC (Remote)

- Built and maintained the backend for secure user portfolios with 6+ personalized pages using **Node.js** and **Express.js**. Implemented **JWT-based authentication** for user-specific access control and applied robust **Joi validation**, reducing invalid API requests by 40% and improving data integrity. Developed modular **RESTful APIs** and wrote extensive **unit tests** using **Jest** achieving 90%+ code coverage, significantly improving backend reliability and reducing integration bugs.
- Collaborated on frontend development by transforming **Figma designs** into pixel-perfect interfaces, added **Zod validations** for robust form handling, and utilized **session storage** to enhance user continuity—resulting in a 30% boost in form completion rate.
- Contributed to system design efforts by designing and prototyping a real-time **visitor tracking** microservices. Designed a working **proof-of-concept** using **Azure Functions** and **Cosmos DB**, successfully deployed and tested the system on **Microsoft Azure**.

Software Developer Intern - Android Developer

Feb 2023 – Mar 2023

Visanka Technologies, Remote

- Developed an **Android-based (JAVA)** Job Portal App simplifying job searches for seekers, while assisting employers in managing applications and optimizing the hiring process.
- Added features like Applications, Management, and User Authentication, resulting in a 40% improvement in user engagement.

Technical Skills

Programming: Python, Dart, Java, C++, JavaScript(ES6+), TypeScript

Frontend / Frameworks: ReactJS, AngularJS, NextJS, Flutter, HTML, HTML5, CSS, Bootstrap, JSON, YAML, MVC

Backend: NodeJS, ExpressJS, Redux, State Management, Django, Flask, REST APIs, FastAPI, Uvicorn, AWS, Azure, Firebase

Database: SQL, MySQL, PostgreSQL, SQLite3, MongoDB, NoSQL, Elasticsearch, Chroma DB, Cosmos DB, Oracle, Redis

Developer Tools: Git, GitHub, Docker, Visual Studio, Jupyter Notebook, Postman, Visio, Microsoft Office, Operating Systems

Libraries: Pandas, NumPy, Matplotlib, OpenCV, TensorFlow, Scikit-learn, AutoGen, OpenAI, PyTorch

Other: Full-Stack Development, Web development, Data Science, Deep Learning, Design Patterns, Agile, Version Control

Projects

Health Care AI Assistant

Sept 2024 – Nov 2024

- Engineered an **MCP** architecture using **Flutter** that enables users to describe symptoms and receive personalized medical suggestions using **OpenAI's LLM through AutoGen** that analyses symptoms, retrieve relevant medicines, and provide a non-panic-inducing summary.
- Designed a Conversational Bot with **GPT-based logic** and **RAG**-backed verification to classify order issues (Refund, Return, Escalate) with 90% accuracy, using order IDs, payment data, and OCR-processed receipts to detect fraud and automate decisions like Refund, Decline, or Escalate with 70% accuracy.

ShopHub - AI-Powered E-commerce Platform

June 2025 – Jul 2025

- Containerized and deployed a full-stack e-commerce platform using **Next.js 15** and **React 19**, integrating an AI chatbot via **LangChain**, **LangGraph**, and **OpenAI GPT-3.5**, which reduced product search time by 43% and improved session engagement by 27%.
- Implemented end-to-end **CI/CD pipelines** with **GitHub Actions** and deployed on **Vercel**, automating builds and tests to cut deployment time by 61% and increase release reliability to 98%.

SunWise

Apr 2025 – Jul 2025

- Built an AI-powered Solar Potential Visualizer using **React** and **Flask** to predict solar irradiance and segment rooftops from satellite images with 87% accuracy.
- Integrated **Google Maps API** to auto-detect user location and render rooftop polygons for real-time solar forecasts across 40,000+ ZIP codes, and created interactive, responsive dashboards to visualize ROI, carbon offset, and energy savings.

Car Damage Detection

Aug 2023 – May 2024

- Developed an end-to-end web application using **Computer Vision** to detect vehicle damage with an overall accuracy of **91%**, and classify damage **location** (front, rear, side) and **severity** (minor, moderate, major).
- Trained a **Convolutional Neural Network (CNN)** on annotated car images achieving 91% accuracy in damage detection, 65% in location prediction, and 70% in severity classification.
- Implemented a full ML pipeline including image preprocessing, model selection, hyperparameter tuning, validation/testing.

Community & Leadership

Android Developer Lead

2022 – 2023

Google Developer Student Clubs (GDSC)

Pune, India

- Led a team of 50 students in creating innovative mobile applications. Organized and conducted seminars on Android development best practices and emerging technologies.
