PROFESSIONAL EXPERIENCE

Switch Agency (June 2025 - Present)

Frontend Software Developer

- Leading end-to-end development and deployment of the company's website using Webflow, JavaScript, and GSAP, creating custom components and resolving technical issues to deliver a production-ready platform that enhances brand presence and usability.
- Translating Figma designs into responsive, accessible web interfaces, delivering responsive layouts optimized across browsers and devices, which improves user experience consistency and accessibility compliance.
- Developing and maintaining client websites by implementing ongoing updates in Webflow, JavaScript, ensuring alignment with evolving brand requirements and functionality needs to support customer satisfaction and retention.
- Contributed to strategic planning sessions by bridging design and engineering perspectives, providing technical recommendations, and scalable solutions that advanced the business objectives and streamlined project execution.

Restaurant.com (June 2020 - February 2023)

Software Engineer

- Redesigned and modernized the company website by developing a scalable UI/UX using C#/.NET, JavaScript, and SQL Server, resulting in improved performance, increased user engagement, and growth in traffic and sales.
 - Developed and maintained full-stack applications, implementing SQL stored procedures, database-driven functionality to support critical business operations.
 - Managed end-to-end software deployments using CI/CD pipelines and Octopus Deploy, ensuring seamless integration, system stability and adherence to best practices from development through production.
 - Performed unit and integration testing, troubleshooting and debugging to validate application functionality and usability, and reduced post-deployment issues.
 - Optimized website performance and scalability by analyzing and reducing load times, and resolving issues through systematic monitoring and ticketing workflows
 - Collaborated within an Agile environment, effectively delivering production-ready features on time while contributing to sprint planning, code reviews and team retrospectives.
-

PROJECTS

AI Image Generator App – Built a full-stack application using **OpenAI API** and **React.js** where users generate images from text prompts.
